POSTDOCTORAL TRAINEE
in Population-Based Interventions

DESCRIPTION
Under the supervision of the principal investigators, the postdoctoral trainee will participate in activities of a research team composed of researchers and partners from across Canada. The team is looking at population-based interventions implemented by directors of public health, in partnership with municipal partners, that aim to overcome social health inequalities by creating environments conducive to healthy eating and physical activity in urban settings.

RESPONSIBILITIES
The postdoctoral trainee’s main responsibilities will be as follows:
- Participate in various data collection activities
- Carry out and participate in data analyses
- Write articles to be published in scientific journals
- Participate in preparing meetings with knowledge users
- Work on preparing grant proposals

QUALIFICATIONS
- Doctoral degree in a field related to epidemiology, health promotion or population health
- Sound knowledge of quantitative and qualitative research methods in population health
- Good knowledge of French and English
- Good synthesis skills, autonomous, creative, good writing skills, able to work with a team.
