

Session 4 Areas for Further Study

- How can developing nations be involved in a meaningful and constructive way?
- What is the role for regional implementation mechanisms to overcome lack of national mechanisms?
- What level of international legal mechanism is right for the next phase of debris mitigation? Is it a space debris Regime?
- What is the role and mechanism for commercial operators to participate as partners with governments in this process?
- Should a space debris regime be part of a larger space safety regime?

- How can we take into consideration probable future need for space traffic control into the space debris regime? (future proof)
- How do we ensure that the debris mitigation methods are validated, verified, enforced and have demonstrated sufficiency?
- What role can a space debris/safety regime play in the overall context of global human and environmental security?
- How do we incentivize/enforce adherence to re-orbit guidelines and consideration in all satellite mission design, including MEO?
