

## ATTENTION NEW MSc PSYCHIATRY STUDENTS

The Prevention and Early Intervention Program (PEPP) at the Douglas Mental Health University Institute is offering supervision and a stipend to a master's level student in Psychiatry or related discipline. The research project involves the investigation of stress and protective factors in first episode psychosis and clinical high risk patients, with a focus on neurobiological markers of stress.

PEPP provides a stimulating working environment in a large interdisciplinary team of clinicians and researchers. We follow a comprehensive protocol for the assessment of symptoms, cognition and functional outcome. As a result there is a well established data base for both phases of the disorder.

The successful applicant should have a bachelor's degree in a relevant discipline (e.g. psychology, neuroscience) and be fluent in both English and French. Prior research and clinical experience is an asset. The candidate will be supervised by one or more of the established investigators in the program (Drs. Marita Pruessner, PhD, Jai Shah, MD, FRCPC and Dr. Ashok Malla, MD FRCPC).

Please send your complete Curriculum Vitae to Marita Pruessner at [marita.pruessner@mcgill.ca](mailto:marita.pruessner@mcgill.ca). Starting date will be in January 2015. For more information on PEPP, visit our website: [http://www.douglas.gc.ca/pages/view?section\\_id=165&locale=en](http://www.douglas.gc.ca/pages/view?section_id=165&locale=en).
