Rationale		The course is being taught as a seminar and has a large writing component that, combined with the higher course number, allow it to fill the requirements of Honours complementary courses in PSYC. The course fits the criteria for a 500 level, since the professor wants to add 300 level prereqs (PSYC 305 or BIOL 373 and PSYC 311) and because the course involves critical reading of primary articles, discussions, presentations and writing. Moving it to 500 also helps offset the reduction of higher level courses in both PSYC and NSCI caused by moving								

		PSYC 429 to 328, and moving PSYC 505 to PSYC 302.						
Responsible Instructor		Jelena Ristic, PhD						
Course Description	An introduction to cognitive properties and neural mechanisms of human attention. The material will include an overview of the history of attention research, contemporary theories of attention, the varieties of attention, behavioral and neuroimaging experimental methods, the nature of attentional dysfunctions, and the links between attention and other cognitive functions including memory and consciousness.
