1. **Preamble**

The purpose of this policy is to outline the basic principles for the care of animals involved in research, teaching or testing at McGill University and affiliated institutions1 (henceforth McGill University).

McGill University recognizes the importance of animal research in our efforts to further our knowledge of natural processes, diseases and conservation. McGill University also recognizes that animal models are a valuable component of teaching.

Research, educational and testing projects must be conducted with full commitment to the wellbeing of the animal subjects. In order to limit animal use to meritorious research or educational projects, McGill University relies on stringent peer review processes, along with assessment of ethical issues by the Animal Care Committee (ACC). Decisions of ACCs are of the utmost importance to the entire review process; the objective of ACCs is to keep a balance between the need for high quality research, teaching and testing, and compassionate treatment of animal subjects.

McGill University recognizes that the use of animals in research, teaching and testing carries significant responsibilities. McGill University will continue to develop and maintain guidelines and regulations, following the high standards established by the Canadian Council on Animal Care (CCAC).

McGill University is committed to conducting the highest-quality research and to providing animals with the best care. At McGill University, all research, teaching and testing involving animals is guided by the Russell-Burch tenet of Replacement, Reduction and Refinement2. A rigorous review by ACCs ensures that animals are used only when necessary and under humane conditions.

McGill University regards the use of animals in research, teaching, and testing to be an integral component of continued progress in medicine, science, education, environmental sciences and agriculture, resulting in enormous potential benefits for human and animal health.

2. **Policy Statement**

All individuals involved in the oversight, care and use of animals:

a. Have a responsibility to the scientific community and society as a whole for the proper stewardship of the animals under their care;

b. Will be aware of their responsibilities in the use of animals in research, teaching and testing, as determined by public concerns, federal and provincial laws and regulations, and McGill University policies.

3. **Office and Committees Responsible for Monitoring the Care and Use of Animals**

a. Vice-Principal (Research & International Relations)- VP RIR
   - The VP RIR has executive responsibility for the Animal Care and Use Program;
   - The VP RIR hears and decides appeals of administrative or Animal Care Committee actions and/or decisions.

b. Animal Compliance Office (ACO)
   - The ACO is headed by its Director who reports directly to the VP-RIR;
• It works closely with the University Animal Care Committee (UACC) for establishing McGill University institutional policies on the care and use of animals;
• It assists investigators, research staff, students, veterinary and animal care staff, FACCs, and administrators in remaining compliant with animal care and use regulations, policies and guidelines;
• The ACO promotes University-wide understanding of the requirements for the ethical conduct of research, teaching, and testing involving animals.

c. University Animal Care Committee (UACC)
• The UACC is the institutional body responsible for ensuring the humane care and use of animal in research, teaching and testing, and has final authority to suspend any activity involving animals, which does not comply with applicable laws, regulations, policies and guidelines, where the Facility Animal Care Committee (FACC) refuses or fails to act. To that end, it has the right to investigate any area where animals are housed or used. When such inspections are deemed necessary by the UACC, efforts will be made to minimize the risks of compromising ongoing scientific investigations, and whenever possible, a collaborative approach will prevail;
• The Committee works closely with the ACO;
• The Committee’s specific composition and function will accord with the requirements of the CCAC and are detailed in its Terms of Reference.

d. Facility Animal Care Committees (FACC)
• The FACCs are the local bodies responsible for ensuring the humane care and use of animals in research, teaching or testing, within its jurisdiction according to CCAC guidelines and policies;
• The FACCs are responsible for the ethical review and certification of Animal Use Protocols (AUPs). The Committees are also responsible for monitoring compliance with approved protocols;
• The FACCs, with the assistance of the Quality Assistant responsible for post-approval monitoring, have the authority to suspend any activity involving animals that does not comply with the applicable laws, regulations, policies and/or guidelines. The FACCs have the right to inspect areas where animals are housed or used. When such inspections are deemed necessary by the FACC, efforts will be made to minimize the risks of compromising ongoing scientific investigations and whenever possible, a collaborative approach will prevail;
• The Committee’s specific composition, jurisdiction and function will accord with the requirements of the CCAC and are detailed in its Terms of Reference.

The responsibility for ensuring compliance is shared with all the constituents of the program.

4. Use of Animals in Research, Teaching and Testing

The use of animals in research, teaching and testing must be described in an Animal Use Protocol (AUP). At McGill University, all AUPs:

a. Are peer-reviewed for scientific or pedagogical merit;
b. Are approved by the Facility Animal Care Committee (FACC) before animals are purchased and/or used in laboratory or field studies;
c. Comply with the CCAC policies and guidelines;
d. Ensure that work with animals is performed in an area approved by the FACC and/or a CCAC certified institution’s facility, which will consistently ensure the appropriate care of animals and the safety of staff through high standards of animal care and management.

In addition, all AUPs conducted outside Canada by McGill individuals:

a. Are ideally performed in an institution or facility accredited by the CCAC, the International Association for Assessment and Accreditation of Laboratory Animal Care (AAALAC) or other national or international accreditation organizations;
b. Failing the existence of any official accreditation policy in the relevant location, it is the responsibility of the McGill researcher to obtain reasonable assurance that all work will
be conducted in an environment where animals are treated humanely to the satisfaction of the FACC.

The AUP will contain detailed explanations on:

a. Alternatives: Whenever compatible with research, teaching or testing objectives, alternative methods for replacement (non-animal use), reduction in the number of animals, and refinement in procedures and husbandry will be applied for the proposed project;

b. Animal numbers: Animal numbers will be minimized and justified based on a clear description of the objectives, the study design and/or on a statistical rationale;

c. Endpoints: Any anticipated signs of morbidity will be clearly outlined and will warrant appropriate monitoring by trained individuals. Procedures which cause severe pain near, at, or above the pain tolerance threshold of unanesthetized conscious animals, or death and moribundity as clinical endpoints or study goals are not permitted.

d. Pilot Project: The FACC may require a pilot study if the clinical signs, and their severity or frequency, are unknown. Results from this pilot study will be reported to the FACC before approval of the complete protocol. Animals will be removed from the study, treated or euthanized at the earliest possible endpoint consistent with the objective(s) of the proposal, and in accordance with the endpoints in the AUP accepted by the FACC;

e. Long term housing and reuse of animals: These issues will be carefully considered by the FACC, taking into account the general welfare of the animals;

f. Research, teaching, testing and husbandry procedures: These will be performed in conditions that consider both the welfare of the animals and the success of the procedures. They will be performed by trained individuals who are capable of ensuring appropriate care;

g. Euthanasia: The method used will follow the recommendations of the CCAC. The euthanasia will be carried out by trained individuals and be performed in conditions which avoid unnecessary pain or distress to the animal;

h. Source of animals: The source of animals will be legal, recognized and reputable. The FACC will approve the source of the animals before they are ordered or used;

i. Hazardous materials: The use of hazardous agents (radioactive materials, recombinant DNA/RNA, human/plant/animal pathogens, toxins, chemical carcinogens, etc.) must be described in detail including the potential health risks to humans and animals, special animal care and containment requirements, precautions for individuals, animal disposal and related waste requirements as well as applicable emergency procedures. Individuals working with hazardous material must adhere to applicable environmental and safety guidelines.

5. Animal Care

Animals will be maintained in an environment and using practices that will promote their health and psychological wellbeing in terms of housing, social, dietary and behavioural needs unless approved otherwise by the FACC for a specific AUP.

6. Veterinary Care

a. The veterinarians have the authority and responsibility to make determinations concerning animal wellbeing and to assure that this is appropriately monitored and promoted;

b. The veterinarians participate in the development of policies and procedures for animal care, animal study, the training and qualification of animal users and animal care personnel, standards of husbandry, facilities and equipment, procedures for alleviation of unnecessary pain or distress; procedures for the proper and effective use of anesthesia and analgesia; standards for post-operative care and procedures for euthanasia;

c. The veterinarians have the authority to remove an animal from a study, test, or teaching activity that is adversely affecting its wellbeing beyond a level reviewed and approved by the FACC;

d. The veterinarians have the authority to use appropriate treatment or control measures, including euthanasia if indicated, following diagnosis of an animal disease or injury. Whenever possible, the veterinarian will discuss the situation with the principal investigator (PI) or designate to determine a course of action consistent with the study goals. However, if the PI or designate is not available, or if agreement cannot be reached, the veterinarian has the authority to act to protect the health and wellbeing of the animals;
e. The veterinarian has the right to inspect areas where animals are being used or housed. Efforts will be made to minimize the risks of compromising ongoing scientific investigations and whenever possible, a collaborative approach will prevail;
f. Veterinarians providing professional services to McGill University will have an appropriate certification and training or experience. They will be knowledgeable in the care of the species being used or capable of identifying appropriate sources of expertise and be cognizant of concepts involved in animal-based research;
g. External providers of veterinary services will have a contractual agreement in which their responsibilities and obligations are clearly outlined, according to the Canadian Association for Laboratory Animal Medicine (CALAM) Standards of Veterinary Care.

7. Education and Training

a. Before undertaking a procedure or using and caring for a species, all individuals involved will have appropriate training and preparation in accordance with UACC policies;
b. All classroom projects involving animals must be approved by an FACC. Students who are part of such projects and work under the direct and constant supervision of a certified animal user, will be instructed on the ethical care and use of animals but are not required to obtain individual training certification.

8. Occupational Health

a. Individuals who are exposed to animals, tissues, body fluids, wastes, bedding, living quarters or equipment involved in the care and use of animals are strongly encouraged to participate in an occupational health program. For individuals working with non-human primates, participation in the program is mandatory. Any costs related to mandatory compliance with this policy shall be borne by McGill University (or Affiliated Hospital when applicable).
b. All individuals working with or exposed to non-human primates will be tested yearly for tuberculosis for their own safety and the safety of the animal colonies.

9. Record Keeping

a. The Principal Investigator is responsible for maintaining research records which should include pertinent information such as number of animals used, date of inoculations, history of surgical procedures, post-operative care and information on study procedures, etc.;
b. Records documenting such activities as the provision of appropriate veterinary care and occupational safety as it pertains to animal research must conform to the recommendations of the CCAC and with commonly accepted standards;
c. All records must be readily available for inspection by regulatory authorities, veterinary staff and animal care staff.

10. Physical Plant

a. All housing and procedure facilities for animals involved in research, testing and teaching must be conducive to the wellbeing and safety of the animals, provide an appropriately appointed and safe workplace for personnel, and establish an appropriate research environment. All facilities will be maintained, managed and operated in compliance with all pertinent laws and regulations, including CCAC guidelines and policies. All of the institution’s facilities (including animal facilities and laboratories where live animals are studied) and their operations will be inspected and reviewed at least annually by the appropriate FACC;
b. All major proposals, plans, and construction documents which are developed in order to create facilities, to accommodate or house new species, or to renovate existing animal facilities, must be developed in compliance with all applicable laws and regulations, including CCAC guidelines and policies, and will be reviewed and approved by the FACC and/or UACC as appropriate.
11. Procedure for Reporting Violations of this Policy

a. Any individual who is aware of possible violations to existing animal care and use regulations must report this concern to the Chair of the relevant FACC or the Animal Compliance Office (ACO). If so desired, his/her name will be kept confidential.

b. The ACO will inform the relevant FACC Chair, who will evaluate the situation, in conjunction with ACO, and, if warranted, will further investigate.

c. If the charges are substantiated, the FACC may suspend a previously approved protocol, or a portion thereof. In addition, disciplinary measures may be taken, in accordance with applicable University regulations. These actions will be reported and discussed at FACC meetings.

d. All individuals who are involved in any reporting and/or investigation process are obliged to maintain confidentiality of the proceedings. At the request of a party to the complaint, after the investigation has concluded and if warranted by the circumstances, the VPRIR may release publicly and/or to the appropriate committees a summary notice of the case, the issue, and the resolution.

e. Attempts by individuals to discredit others through inappropriate use of this policy are not permitted; such individuals will be considered for disciplinary action.

f. For those not wishing to use the procedures outlined above, consult the Policy on Safe Disclosure.

g. All individuals are to refer to the UACC’s Policy on Animal Welfare and Compliance Concerns posted on the UACC Web site for information on resolution guidelines, authority and reporting.
