

Table of Contents:

- Chapter 1: Gene Transfer Lost in Translation: An Introduction
- Chapter 2: What is Gene Transfer?
- Chapter 3: Safety, Values, and Legitimacy: The Protean Nature of Risk in Translational Trials
- Chapter 4: Taming Uncertainty: Risk and Gene Transfer Clinical Research
- Chapter 5: Succor or Suckers? Evaluating the Benefits of Trial Participation
- Chapter 6: Looking Backward: A Model of Value for Translational Trials
- Chapter 7: Over the Chasm: The Initiation of First-in-Human Trials
- Chapter 8: Tropic of Cancers: Gene Transfer in Resource-poor Settings
- Chapter 9: Great Expectations and Hard Times: Managing Expectations in Gene Transfer
- Chapter 10: Something in the Sight Adjusts Itself: Conclusion

"This fine book delivers an in-depth analysis of gene transfer research, and much more. Kimmelman's informed and careful examination is relevant to many areas of cutting-edge science... [and] offers incisive criticism, but admirable balance as well.... In an era that emphasizes translational work in biomedical research, Kimmelman supplies much-needed guidance to ethicists, scientists, and policymakers."

Rebecca Dresser, JD
Daniel Noyes Kirby Professor of Law
Professor of Ethics in Medicine
Washington University in St. Louis

"Sets a new standard for bioethical scholarship that is at once scientifically well-grounded, politically astute, philosophically original, and a pleasure to read. In addition to providing an exceptionally clear guide to the history and challenges of human gene transfer research, Kimmelman uses that story to introduce the next chapter in our ethical thinking about the first human trials of all kinds."

Eric Juengst, PhD
Professor of Bioethics,
Director, Center for Genetic Research Ethics and Law
Case Western Reserve University
