Justice (considered relationally)
Prof. Jarrett Zigon

MONDAY APRIL 12, 2021 / 12:30PM-2:30PM

Typically, justice is conceived in terms of fairness, distribution, or retribution. Too often these are articulated instrumentally and by means of calculation. This talk will instead attempt to think justice relationally and situationally, and in terms of attunement. To do so, I will engage some of my ethnographic work with the anti-drug war movement, their concern with policing and mass incarceration, and the increasing use of what I call algorithmic “justice” in order to consider justice relationally.

Jarrett Zigon is the Porterfield Professor of Bioethics and Professor of Anthropology at the University of Virginia. His research interests include the anthropology of ethics, problematics of being human, questioning the political, ontological relationality, and thinking anthropology with philosophy. These interests are taken up from a perspective strongly influenced by post-Heideggerian continental philosophy and critical theory, and are explored in his most recent books Disappointment: Toward a Critical Hermeneutics of Worldbuilding and A War on People: Drug User Politics and a New Ethics of Community.
