Miniature Series 07
Micro-Fog Lubricator
1/8” and 1/4” Port Sizes

- Compact design
- Provides air line lubrication to one or more air driven tools or other devices
- Nearly constant oil density output with varying air flow
- All around (360°) visibility of the sight-feed dome simplifies installation and adjustment
- Screw-on bowl reduces maintenance time
- Can be disassembled without the use of tools or removal from the air line

Technical Data
Fluid: Compressed air
Maximum pressure:
  - Transparent bowl: 10 bar (150 psig)
  - Metal bowl: 17 bar (250 psig)
Operating temperature:*
  - Transparent bowl: -20° to +50°C (0° to +125°F)
  - Metal bowl: -20° to +80°C (0° to +175°F)
* Air supply must be dry enough to avoid ice formation at temperatures below +2°C (+35°F)
Start point (i.e., minimum flow required for lubricator operation):
  0.24 dm³/s (0.5 scfm) at 6,3 bar (90 psig) inlet pressure
Typical flow at 6,3 bar (90 psig) inlet pressure at 0.3 bar (5 psig) pressure drop:
  1/8” ports: 5 dm³/s (10 scfm)
  1/4” ports: 6.7 dm³/s (14 scfm)
Nominal bowl size: 31 ml (1 fluid ounce)
Drain connection: 1/8” pipe
Recommended lubricants: See page N/AL.8900.935
Materials:
  - Body: Zinc
  - Bowl:
    - Transparent: Polycarbonate
    - Metal: Zinc
  - Sight-feed dome: Transparent nylon
  - Elastomers: Neoprene & nitrile

ISO Symbols
No drain
Manual drain

Port Size: 1/4"

Typical Flow Characteristics

Outlet Pressure (bar g) vs. Air Flow (dm³/s)

* Approximate flow at 6.3 bar (90 psig) inlet pressure and 0.5 bar (7 psig) pressure drop.

Ordering Information. Models listed include ISO G threads and transparent bowl without drain.

Warning

These products are intended for use in industrial compressed air systems only. Do not use these products where pressures and temperatures can exceed those listed under 'Technical Data'.

Before using these products with fluids other than those specified, for non-industrial applications, life-support systems, or other applications not within published specifications, consult NORGREN.

Through misuse, age, or malfunction, components used in fluid power systems can fail in various modes. The system designer is warned to consider the failure modes of all component parts used in fluid power systems and to provide adequate safeguards to prevent personal injury or damage to equipment in the event of such failure.

System designers must provide a warning to end users in the system instructional manual if protection against a failure mode cannot be adequately provided.

System designers and end users are cautioned to review specific warnings found in instruction sheets packed and shipped with these products.

Water vapor will pass through these units and will condense into liquid if air temperature drops in the downstream system. Install an air dryer if water condensation could have a detrimental effect on the application.
