

My Rather Unexpected Open Science Journey

Dr Jane Roskams

MNI, Nov 18, 2019

From the Isle of Man to Olfaction to Genomics to the BRAIN Initiative To Open Data Sharing (with 2 different Microsoft Co-Founders) to the White House To Citizen NeuroScience Game Design, and International Brain Data Analytics and Training

1995/6: My Beginning in **Open** – A Journey into the Human Genome (CSHL via NCBI)

- *“Why don’t we ever show what it looks like when we screw up?”*
-
- *-Life Lessons in epigenetics, and Game-Changing Collaboration across Genomics communities ->Human Genome Project*

Understanding and Unlocking Human/Cell Potential

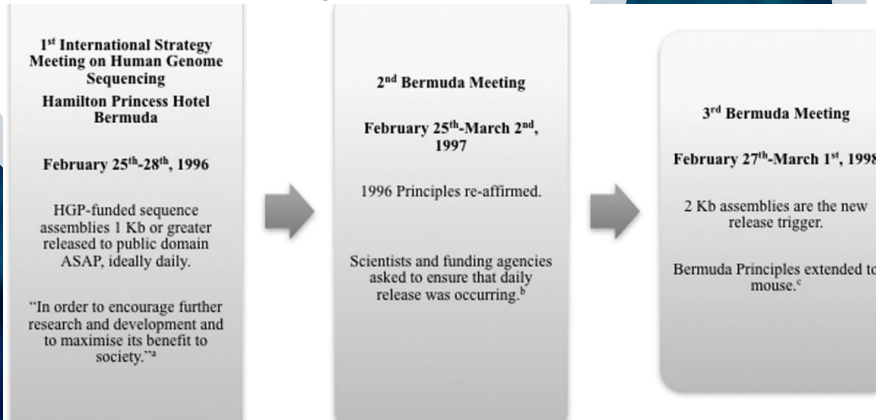

OPEN DNA/Chromatin and its Many Impactors...

What happens in Bermuda (1996-7)....

Sirs John Sulston
and Sydney
Brenner

Francis Collins and
J Craig Venter

- Quality Standards
- Sequence Submission and Annotation
- Sequence Claims (IP) and Etiquette
- Increased funding of open tools for data exchange and technology development
- Coordination network/governance

1996-97: The Exponential Growth of NCBI (*and birth of my education in informatics*)

- Sequence deposited from all over the world, and coordinated through NCBI
- Huge amount of brain data coming off the pipeline
- dbEST, xrefdB, etc
- New tools for alignment
- The birth of NLP, genome-style
- Computational modeling across genomes
- And MUCH more to take to my new UBC lab!

Mark Boguski

Stephen Friend

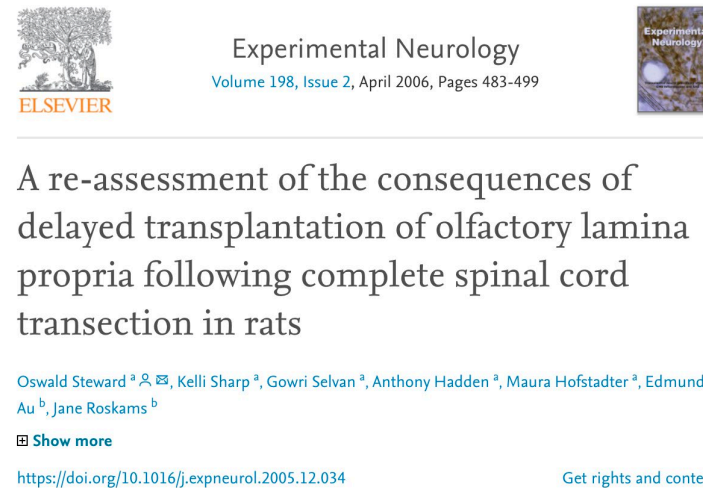

JaneLab **Open** for Business - at UBC, 1997-2014)

- Lab pioneered the development of in vitro, lesion and ko/ transgenic approaches to understand **olfactory system** regeneration and degeneration mechanisms.
- **Openly** Published active protocols on our lab website; shared mice
- Developed embryo-derived “stem cell” lines - **openly** shared with dozens of labs worldwide
- **Open** collaboration with Don Nicholson, Merck-Frosst on neuronal cell death inhibitors
- Welcomed trainees from many collaborator’s labs (across Canada, US, UK, S Africa, Germany and Holland) to **openly** train in lesion, stem cell culture techniques we developed
- Jumped collaboratively (with W Tetzlaff, UBC; others) into the spinal cord injury world
- **Co-funded** for research on regeneration, remyelination and stem cell transplants with colleagues at UBC, UCSD, U of Utah, Miami Project, UCI, Univ of Cambridge, UCL, ISB
- Invited to participate in **NIH SCI replication studies (2004-2008)**

WHY OPEN? 2004-2014: THE ENORMOUS CHALLENGE OF Spinal Cord Injury REPRODUCIBILITY!

- Different injury models
- rat vs. mouse (vs. primate?)
- behavioral assessment
- Transgenic mice-genetic variability across strains
- immune variables
- How to transplant ??
- Secondary Damage?
- What to assess?
- How?

NIH-Funded – Me + collaborators = 2 “failures to replicate” (and new insight!)

SCI is Highly Complex: Gazillions of tiny measures of biofunction

2019: Democratization of SCI Data Science – Community-Driven Open Data Sharing => Hope for Reproducibility

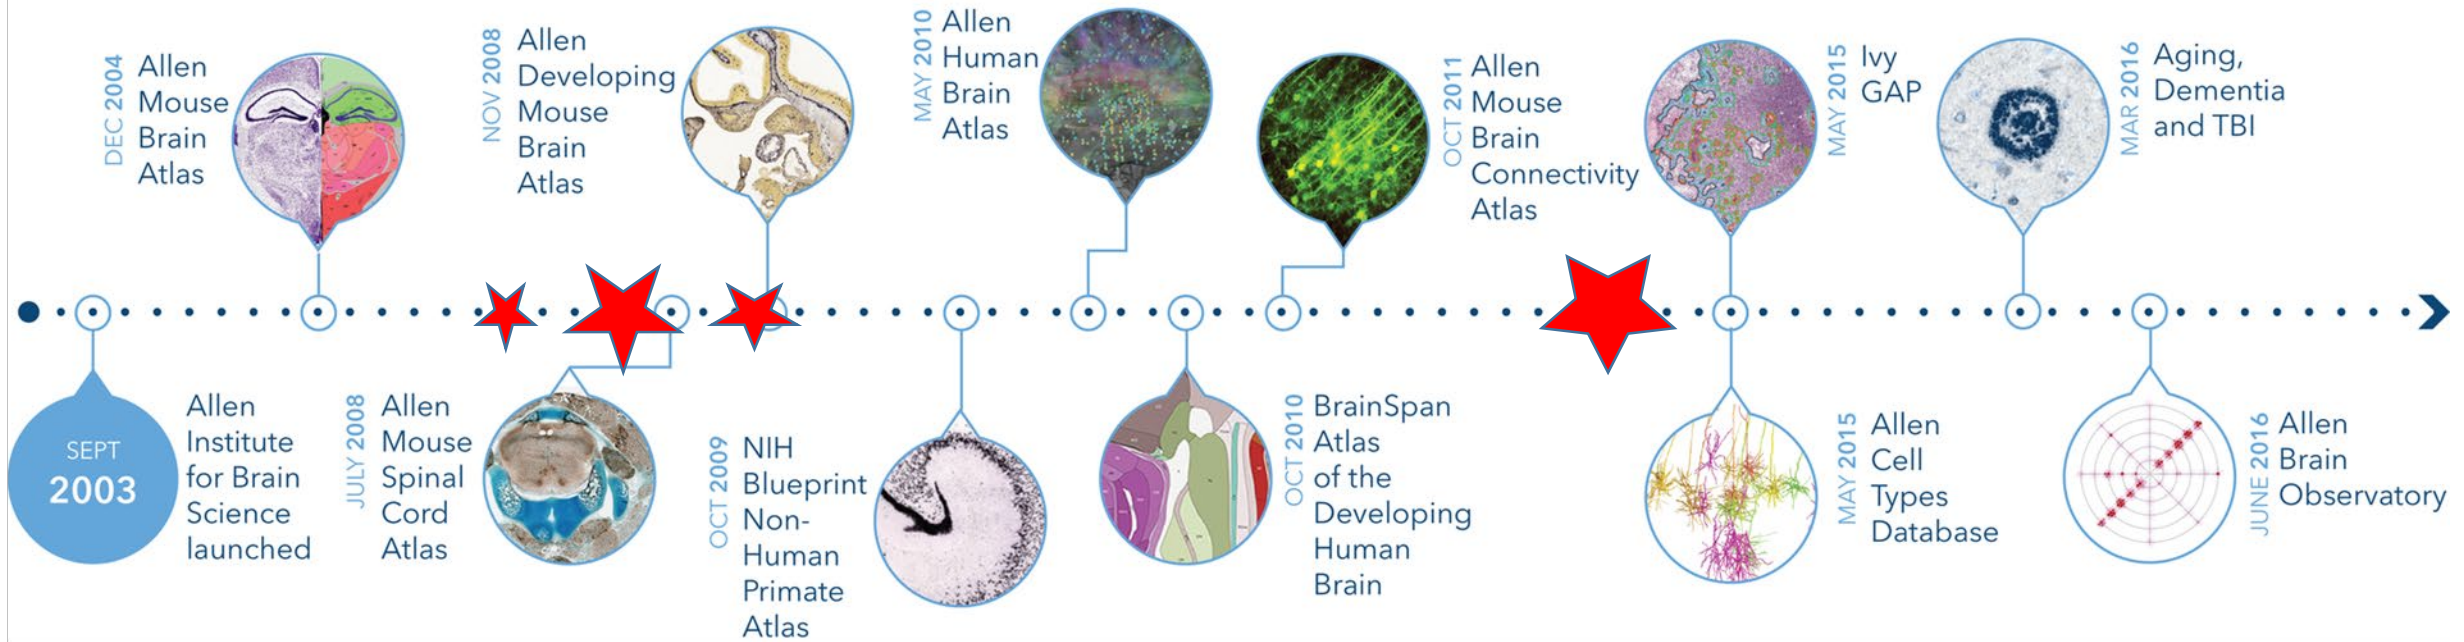

[HTTP://ODC-SCI.ORG](http://ODC-SCI.ORG)

In 2014, I decided to
jump off the academic
lab merry-go-round and
commit to the world of
Open Science

2014 Destination Seattle: Pioneering Open Science & Data - The Allen Institute for Brain Science

- Since 2003, their product portfolio includes downloadable data repositories, software applications, reference standards and training toolkits – open to all

2003-2012: 50,000 visitors/month

- Users from around the globe
- **>3 Petabytes data** generated
- **>5000 engineered mice**
- > 1 million microscope slides

Over 35 million page visits through brain-map.org by 2019

Data & tools are available at brain-map.org

- Research tools and rich reference datasets covering human brain in health & disease, model organisms and standards for scientists
- Resources for brain, eye, spinal cord research
- Access to publications, laboratory resources, workshops & training toolkits

BRAIN 2025 A SCIENTIFIC VISION

Brain Research through Advancing Innovative
Neurotechnologies (BRAIN) Working Group
Report to the Advisory Committee to the
Director, NIH

June 5, 2014

Goal: See circuits in action to understand the Brain

- How the brain moves, plans, executes
- How to monitor/manipulate circuits for improved function
- That disordered brain circuits cause neuro/mental/substance use disorders

Long-term goal: Make circuit abnormalities the basis of diagnostics, and normalization of circuit function the target of intervention

- 7 PRIORITY research areas - **Discovering diversity, Maps at multiple scales, the brain in action, demonstrating causality, Identifying fundamental principles, Advancing human neuroscience, integration**

THE BRAIN INITIATIVE®

Focus on Circuit Structure and Function

\$4.2B: Projected total for BRAIN

\$550M: BRAIN Funding through 2017

BRAIN Initiative announced
April 2013

1st meeting of the BRAIN MCWG
August 2014

1st BRAIN PI Meeting
November 2014

Neuroethics Division established
August 2015

BRAIN Initiative Alliance website launches
November 2016

4th NIH BRAIN awards
May, October 2017

BRAIN 2025 Report released
June 2014

1st NIH BRAIN awards
September 2014

1st BRAIN Initiative Alliance discussion
July 2015

Public-Private Partnership Program established
September 2015

21st Century Cures Act signed into law
December

4th BRAIN PI Meeting
April 2018

There's going to be so many piles of Data! What to do with it all?

So Many Neurons In the Brain – how will we understand the form and function of all of them?

Mozak: Democratizing Neuronal Reconstruction - Gamifying to Make the World a Neuroscience Lab

With Zoran Popovic, UW, *FoldIt*

Mozak – Create a Game to Rebuild the Brain one Neuron at a time (NSF-pilot, NIH Funded)

What
We
Need

What
We
Get

<https://www.mozak.science/landing>

Player Actions:

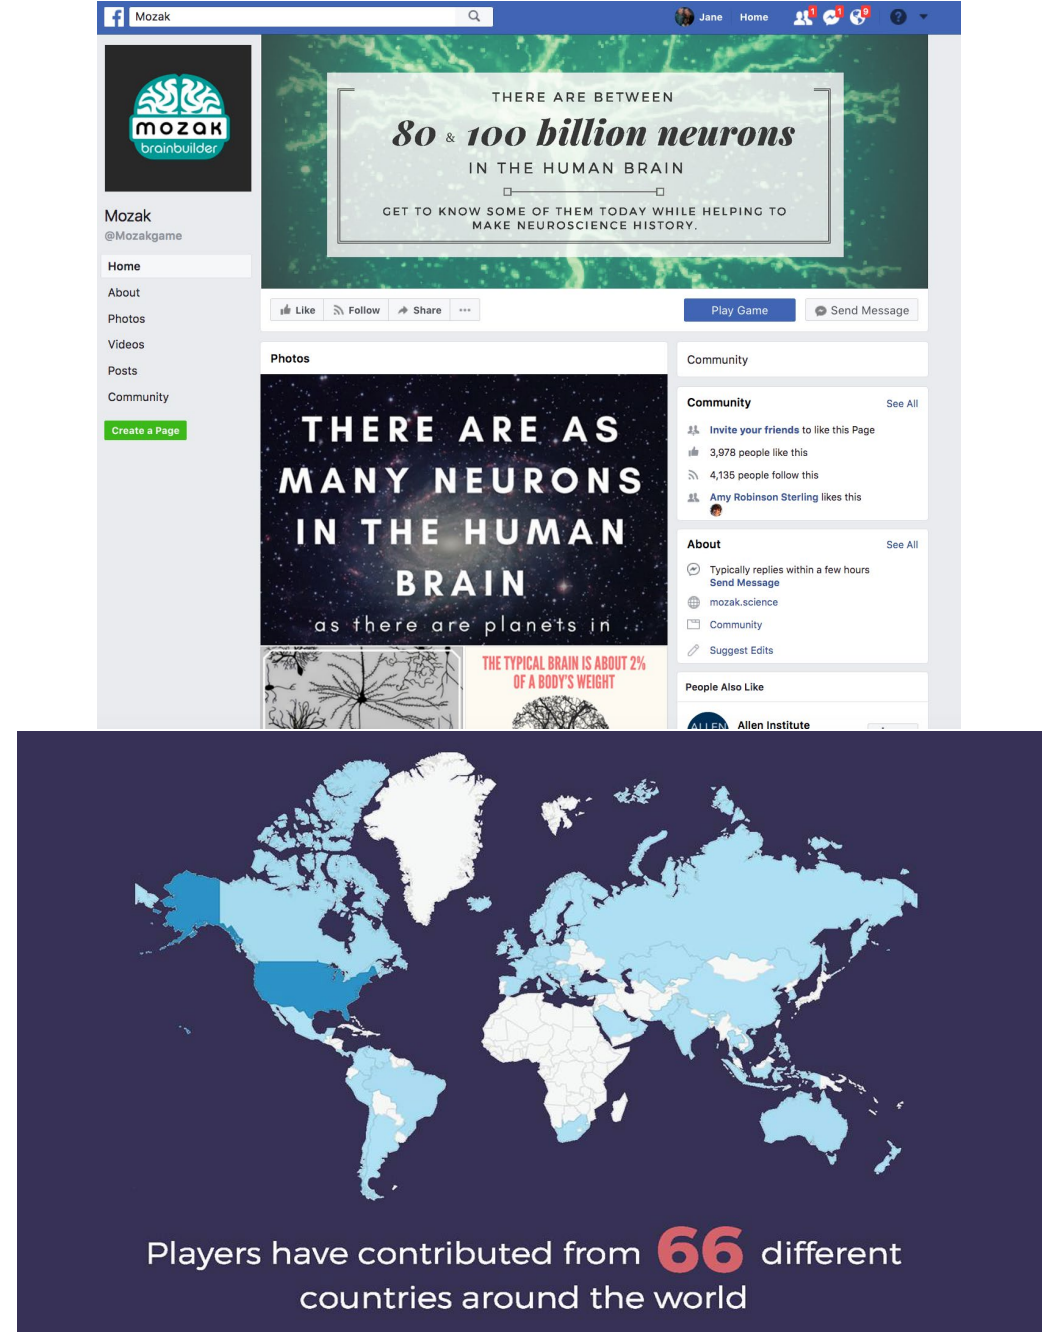

- Create neuron edges
- Delete edges
- Connect edges
- 3D: Rotate, pan, zoom
- Navigate 2D map
- Adjust colors/contrast

Automated Actions:

- Calculate consensus
- Add/remove edges from consensus

Mozak – Building a Global Community of Discoverers

- **The good side of social media** – FB, Twitter, NNR (Neuro News and Research)
 - and the NYT Science Section
- **100K players by 2018**
 - Increased output >4 fold over “experts” at AIBS
 - >90% accuracy on gold standard reconstructions
 - Already enhanced algorithm development
 - **Now funded by NIH through 2024**

2016: A year of Open Science, Citizen Science, 21st Century Cures, Hope....

- and heart-break

BILL & MELINDA
GATES foundation

HEALTHY BIRTH, GROWTH & DEVELOPMENT

knowledge integration

N. L'ntshotsholé “Shasha” Jumbe

HBGD_{ki} What Do we Really Need in our First 1,000 days?

OVERALL GOALS- STUNTING (AND BEYOND?)

- HBGD_{ki} GOAL - to determine the **right** interventions in the **right** dosage to get the **right** response and avoid the **wrong** outcomes
- Integrating knowledge to quantify drivers of variability, determine effect size and enumerate interactions
- While focus is on poor communities with greatest need, counterfactual data collected to accelerate learning on intervention effects

WHAT I LEARNED – THE GOOD, BAD, CHALLENGING

What Do we Need in our First 1,000 days?

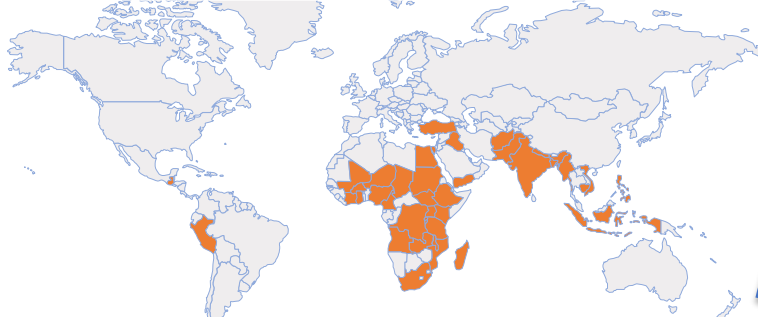

HEALTHY BIRTH, GROWTH & DEVELOPMENT

data, discovery, decisions

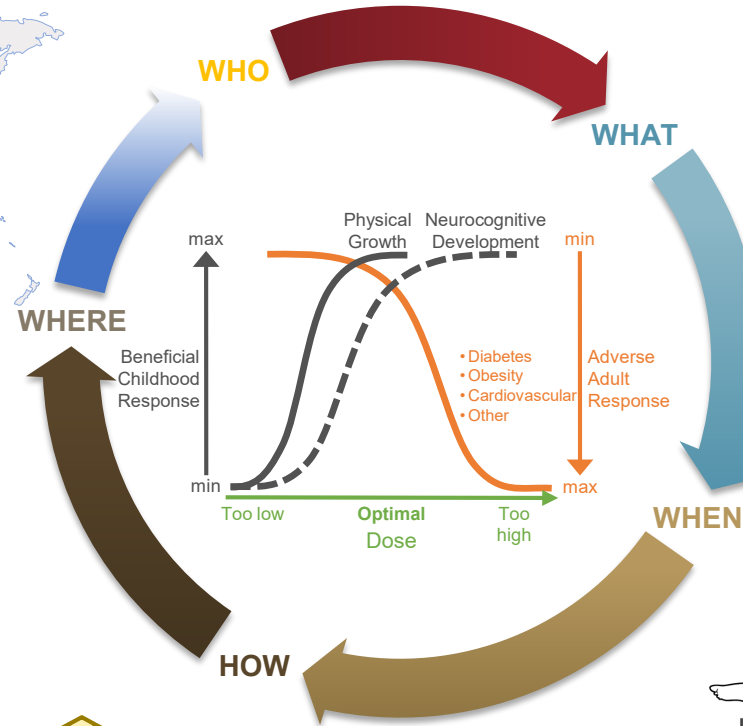

90% OF THE STUNTING BURDEN LIES IN 39 COUNTRIES

- 1** Preventive "base" intervention
- Nutrition, Infection control
 - Nurturing, Parental education

- 2** Therapeutic intervention
- Acute treatment protocols
 - Counseling

- 3** Preventive +

Early Development is Highly Complex: Gazillions of tiny variables

The Hbgdki Knowledge base contains LMIC and counterfactual HIC data as natural experiments

- **Reality: LMIC**
- **153 studies:**
 - From most high stunting burden countries
- **~10.5M subjects data:**
 - 100s of covariates
- **DHS+:**
 - Dozens of prospective collaborations
 - \$\$\$

Counterfactual: HIC

- **16 studies:**
 - Denmark, Netherlands, Singapore, US
- **+7.5M individual subject data:**
 - 1000s of covariates
- **DHS+:**
 - Dozens of prospective collaborations
 - \$

What was different about HBGD*ki*?

- Integrating knowledge to quantify and understand drivers of variability

OPEN DATA and
ANALYSIS - DRIVING
CATALYTIC CHANGE...

Aim to achieve
greatest impact in the
shortest period of time
with the *least amount*
of human and financial
resources.

What is a BRAIN Commons?

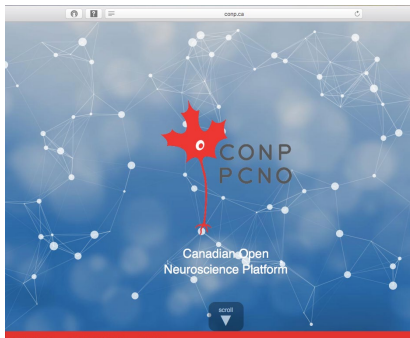

- ✓ A scalable, centralized big data cloud-based platform for computational innovation and data driven discovery for brain diseases
- ✓ Integrates individual level data across data types (*genomics, biomics, imaging, wearable, etc.*)
- ✓ Able to scale to work with large quantities of data (**begin with PTSD**)
- ✓ Equipped with data-analysis and systems biology tools
- ✓ FISMA Moderate Security & HIPAA Compliant & Controlled Data-sharing

Regulation, Governance, legal obstacles across studies, importance of core analysis

The International Neuroinformatics Coordinating Facility

What is INCf?

A standards organization for open and FAIR neuroscience

The mission of INCf is to develop, evaluate, and endorse standards and best practices that embrace the principles of Open, FAIR, and Citable neuroscience. INCf also provides training on how standards and best practices facilitate reproducibility and enables the publishing of the entirety of research output, including data and code.

Standards

INCf serves as a standards organization dedicated to open and FAIR neuroscience by vetting, endorsing, and promoting the use of community standards and best practices.

Training

INCf provides informatics educational resources for the global neuroscience community both online and through in-person courses and workshops at the INCf Assembly.

Working groups

In our Working Groups and Special Interest Groups, users and developers work collaboratively to develop community standards and best practices and implement them in tools and resources.

INCf Assembly

The INCf neuroinformatics conference provides a forum for researchers, infrastructure providers, and developers to connect and train or be trained in neuroinformatics.

The International Brain Lab (IBL), Intern'l Brain Initiative (IBI)

Lessons Learned

- **OPEN** = data and software and AI and ideas and protocols and minds (and hearts)
- Egos cannot drive open, but smart, ethical people reaching consensus can
- Without acceptable standards, data is not FAIR
- Without open software sharing (models, analytics), data are just data
- Listen to and understand the people who collect, and **users** who need to use, the data
- **Use Cases** will get you closest to the answers you are looking for
- UX Design (**User interface**) is critical for engagement
- **Track users** - where do data/software go, who is using them, how?
- Understand and respect (and change?) the ethical and legal restrictions for “open” use of data, software, AI, publishing

The AI revolution is Coming (Open AI Commons)!

It takes an entire Network of Communities to Make Open Science Happen

- The Chemical Senses community
- The Spinal Cord Community/Neurotrauma community
- The Stem Cell Community (Stem Cell Network of Canada)
- The International Brain Org Community – IBRO, INCF
- Global Teaching and Outreach – SfN, BrainFacts.org, Dana Foundation
- Open Data Sharing and Open Science Community (including Sage Bionetworks, CONP, ODSC)
- The Citizen Science Community (inc. DREAM Challenges)
- The Patient Communities (and advocates) who let us use their data

The Philanthropy Community—Brain Canada, BRAIN Initiative, Reeve Foundation (CDRF), Spinal Research (ISRT), Wings For Life, NMSS, MSHRF, MS Canada, Kavli, Gatsby, Simons Foundation, UsAgainst Alzheimer's (George Vradenburg), OneMind, Xprize, Wellcome Trust, Paul and Jody Allen, Bill and Melinda Gates Foundation, Ludmer Foundation, Larry Tannenbaum (TOSI).
