Vaccines: Impact on Global Health and Economics

VACCINES HAVE SAVED MORE LIVES THAN ALL OTHER THERAPIES

PRESENTED BY:

Lorne A. Babiuk Canada Council Killam Prize Winner in Health Sciences, 2013

Dr. Babiuk will describe new formulations and vaccine delivery methods that can further reduce morbidity and mortality in humans. Since over 70% of newly emerged diseases are transmitted from animals to humans, developing dual-use vaccines to prevent their spread from animals to humans is critical. Controlling disease in animals has the potential to increase food security in developing countries and improve their economic stability.

January 20, 2014 5:30 p.m. 3450 McTavish Faculty Club

A reception will follow. Seating is limited; please register early.

RSVP by January 15 www.mcgill.ca/research/killam2014-rsvp

Established in 1965, the Killam Trusts comprise some \$425 million (Cdn), the income on which is largely devoted to scholarships at the graduate and postgraduate levels in Canada. Funding for the Killam Trusts came from Izaak Walton Killam and his wife Dorothy J. Killam with the intent of advancing research in Canada.
