DEPRESSD
WEBINAR
2021

Addressing overestimation of prevalence based on self-report questionnaires:

Are there cost-effective alternatives?

PRESENTERS

Dipika Neupane

Analytical Coordinator

Brooke Levis

Postdoctoral Research Fellow

The presentation will
1) demonstrate why using screening questionnaires to estimate prevalence can overestimate prevalence and blur distinctions between low- and high-prevalence populations
2) discuss possible strategies for generating prevalence estimates
3) describe how a two-stage estimation method that combines screening questionnaires and diagnostic interviews can reduce resource requirements and generate valid prevalence estimates for depression

16 JUN

12 - 1 EST UTC-5
