

Grant application

The 2015 call for proposals aims to further enhance GEPROM's focus on understanding the molecular basis of disease and strengthening translation research within the group. Therefore, priority will be given to projects that have a clear translational component or are directly linked to a disease. The projects should be distinct from any operating grants currently held by the applicants including current funding from GÉPROM.

The competition is open to all regular members of GÉPROM. Each regular member can submit only one application. Individual grants will be funded at \$10K/grant with team grants of 2 at \$15K/grant and 3 or more at \$20K/grant. Funding should be expended by June 2016.

Application deadline: December 4, 2015.

Submit documentation listed below in a single pdf file to geprom.med@mcgill.ca

1. Title of proposal

2. Applicant(s) (individual or team)

3. Summary of research proposal (250 words or less)

4. Outline of research proposal (no more than 1000 words, including references)

Provide a clear, concise outline of your research proposal, your objective(s) and research plan. Explain if and how the project uses a GEPROM supported core facility.

5. Explanation of this application (500 words or less)

State how this application differs from funds applied for and/or received. Explain how the application is innovative in one of two themes: (i) understanding the molecular basis of disease or (ii) developing a translation research program

6. Details of budget (funds for personnel and consumables only)

7. Other funds

Other funds (a) applied for or (b) received, for all research projects. (Give agency, amount, year, and title and summary page of project).
