McGill University

Department of Chemical Engineering

UNDERGRADUATE STUDENT HANDBOOK

for students entering the B.Eng. program
in Chemical Engineering in September 2009 or January 2010

Much information concerning courses and regulations is contained in the current University Announcement. However, because the Faculty Announcement is printed in December of the previous year and changes in the curriculum do occur, the present document is considered the definitive statement of the department's B.Eng. program for students entering the program at the times stated above. Please do not discard your copy until you graduate. You will need to consult the Faculty Announcement for additional information or any changes that may occur during your stay within the department.

S. Omanovic, Chairman
Undergraduate Curriculum Committee

N. Tufenkji
Undergraduate Curriculum Committee

J.-L. Meunier
Undergraduate Curriculum Committee

Please retain your copy of this book until your graduation

II. DEPARTMENTAL ASSISTANCE TO STUDENTS

a) Academic Advisers

Each student has an Academic Adviser to assist in the choice of courses, in the timely progress and completion of all requirements for graduation, as well as to answer questions which may arise while at McGill. It is, however, the student's responsibility, as part of a pre-graduation procedure, to provide proof that all requirements for the degree are fulfilled. The Academic Advisers for new students entering in 2009-2010 are Professors M. Maric, R. J. Munz, and N. Tufenkji.

b) Undergraduate Curriculum Committee (UCC)

The committee is composed of two to four students elected by their classes (U1, U2 and U3) and two staff members. The committee provides a forum for all matters involving undergraduate student/staff interactions. Meetings are open and the agenda and meeting place are posted on the UCC Notice Board prior to each meeting. Electronic mail is also used for communication between students and UCC members.

Elections are held in October (U1) and in February (U2, U3). For the Academic Year 2009-2010, the membership is:

- U4 - TBD
- U3 - Annabelle Martensen
- U2 - Ziyad Shukri
- Staff - Professors S. Omanovic (Chairman), N. Tufenkji, and J.-L. Meunier

c) Canadian Society for Chemical Engineering (C.S.Ch.E) Student Chapter

The President of the Student Chapter in 2009-2010 will be Jennifer Guyot. Professor Reghan Hill is the Faculty Adviser for the Student Chapter. The role and activities of the Student Chapter are described in the University Announcement.

d) Financial Aid and Scholarships

Bursaries and loans are applied for through the Student Aid Office, Brown Student Services Bldg., Suite 3200, 3600 McTavish St. (http://www.mcgill.ca/studentaid/). The primary criterion is financial need.

The scholarships awarded through the department and/or the Faculty of Engineering, primarily for outstanding academic achievements, do not require an application by students.

e) Facilities in the Department

Room Wong 1090 is reserved for the use of Chemical Engineering undergraduate students. This multifunctional room is available as a work space and communication centre. Individual mailboxes are located beside room Wong 1175. Each student must make sure he/she has a mailbox at all times. Please be tidy and quiet in Room 1090. It is not a recreational area, and if so used, it can be lost to us. Undergraduate students can also use Room Wong 1130 for course and research related meetings and presentations. The room has to be booked in advance through Ms. Jo-Ann Gadsby (Room 3060).
The department owns a substantial amount of equipment in its undergraduate and research laboratories. Specialized department services are provided by:

- Undergraduate Laboratories: Wong 4200 - Mr. F. Caporuscio
- Lab. Equipment & Supplies Stores: Wong 3270 - Ms. M. Gorman
- Workshop: Wong 3260 - Mr. L. Cusmich
- Electronics Shop: Wong 3250 - Mr. G. Lepkyj
- Analytical Laboratory: Wong 4200 – Mr. R. Roy
- Secretarial Office: Wong 3060 - Ms. E. Musgrave

f) **Handbook of Chemical Engineering**

An electronic copy of Perry's Chemical Engineers' Handbook is available on the Knovel’s web-site (www.knovel.com). The handbook is accessible through the McGill Library web-site.
III. MISCELLANEOUS INFORMATION

a) **French**

A knowledge of French, essential for engineers to work and communicate effectively in Quebec, is a valuable additional qualification to maintain your ability to move freely in Canada, and provides an important additional attribute for working and travelling internationally. If you do not have a working knowledge of French, you will greatly reduce your opportunities for summer or permanent jobs with companies with Quebec operations. It is also necessary for an engineer to show competence in French to become a member of the Order of Engineers of Quebec and thus to be licensed to practice as a professional engineer. Moreover, we live in a dynamic French milieu whose social and cultural riches cannot be enjoyed without a knowledge of French. It is, therefore, highly advantageous to acquire or improve your ability in French during your years at McGill.

The needs of individual students in this area vary widely. Some need beginner's courses while others require practice in speaking or technical vocabulary, etc. A number of ways of improving skills in French are:

- Write Technical Paper I and/or II in French. Allowance is made in marking of grammar and style when French is not your first language.
- Take Free Elective courses at UQAM, Ecole Polytechnique or U. de Montreal under the Montreal universities exchange of credits scheme. See Registrar's Office for the necessary form.
- Take one or more French Department courses.
- Be a member of a laboratory group which communicates internally and externally (wherever possible) in French.
- Arrange a French discussion or practice group.
- Use all opportunities available (e.g. shopping, television, internet, newspapers, radio) to practice and improve your French.

b) **Photocopying**

Numerous coin-operated and card-operated copying machines are available in the Wong and McConnell Buildings and Libraries.

c) **Oral Presentations**

- Transparencies (write-on or photocopier-type) and special felt pens can be purchased from the Department Store.
- Computer-based presentations: most classrooms are equipped with projectors for the use of computers in presentations. Other projectors are also available to students from the Instructional Communications Center (ICC, Leacock Bldg, room B12).
IV. COURSE ORGANIZATION

a) **Course Progress**

At the first advising session, new students should note the Graduation Requirements form (p. 25-27) which can be used to plan and follow their progress at McGill. Students will record on the form all additional admissions requirements, exemptions or advanced credits (see Section V below) and course marks. This form will eventually be turned in to the Adviser as part of a pregraduation procedure.

b) **Course Loads and Length of Program**

The normal course load per semester is 15-18 credits. Students taking 11 credits or less per semester are registered as part-time students. Students receiving certain bursaries and loans may be required to maintain full time status. Check with your financing provider prior to taking less than 12 credits in one semester. A student who wishes to register for more than 18 credits in a term may only do so with special permission of the Undergraduate Program Coordinator.

Students on probationary standing (see Announcement for criteria and conditions for proceeding) must take a reduced load of no more than 13 credits per semester including repeated courses. The exact number of credits will be recommended by the Academic Adviser on the basis of the difficulties experienced by the student. Care should be taken in the choice of courses for a reduced load to try and meet pre-requisites for courses to be taken in following semesters or years. For example, CMP (CHEE 204 (given in winter)) in the second semester, is a pre-requisite for both Fluid Mechanics (CHEE 314 (given in Fall)) and Separation Processes (CHEE 351 (given in Winter)).

c) **Course Change Deadlines (2009-2010)**

<table>
<thead>
<tr>
<th></th>
<th>Fall 2009 Semester</th>

<td>Last day for withdrawal</td>
<td>Sept. 20 (Sunday)</td>
<td>Jan. 24 (Sunday)</td>
</tr>
<tr>
<td>(with a W)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Beyond this time, student names will appear on the examination lists, and in the event of students not taking the examination, they will be given a "J" grade.

d) **Course Grades**

Course grades (see the University Calendar under General University Information and Regulations) are defined as follows:

1) Grades of A, A-, B+, B, B- and C+ indicate the extent to which ability superior to that required to
qualify for the professional degree is demonstrated.

2) A grade of C (satisfactory) implies achievement at a level of performance consistent with awarding a B.Eng. degree and thus with the practice of the engineering profession.

3) Grades of D and F indicate the extent of deficiency below the required level.

The procedure used to arrive at the letter grades is decided by each instructor in a way appropriate to that course. Note that, in contrast to the Faculties of Arts and Science, in the Faculty of Engineering there is no general relationship between the course grade and percentage marks which may be used for assignments, quizzes, end of term examinations, etc. However, at the beginning of the semester, each course instructor will explain the general terms of the procedure for arriving at a course grade.

e) **Reassessment of a Grade**

The present guidelines are summarized below:

1) A student may request the professor to review the course grade. The professor will check that all the student's work has been marked and that the computation of the grade has been correctly performed. If omissions and errors are discovered, these will be corrected by report to the Associate Dean for Student Affairs.

2) A student may request a re-read of the final examination on payment of a $35 fee. An alternate examiner will then re-evaluate the exam and recalculate the grade with the aid of information provided by the examiner. If the course grade is improved, the fee is refunded. The request for a re-read must be made through the Associate Dean for Student Affairs on or before the last working day of March, July, and November for the Fall, Winter, and Summer courses, respectively. It should be noted that as final exams are normally only one component of the course grade and as some courses do not have a final exam, the final examination re-read is little used in the Faculty of Engineering.

f) **Standings**

In the Faculty of Engineering, a decision on the student's academic standing is based on the CGPA (Cumulative Grade Point Average) according to the criteria listed below:

- **Satisfactory standing:** CGPA of 2.00 or better
- **Probationary standing:** CGPA between 1.20 and 1.99
- **Unsatisfactory standing:** CGPA less than 1.20 or failure to meet the conditions of Probationary standing as described below (if this is the student's first term, the student is normally readmitted to Probationary Standing by Faculty decision).

**Note:** The Faculty makes academic standing decisions after the completion of each term (Fall, Winter and Summer) based on academic results to date. Thus, if a student has been granted permission to defer one or more examinations, the standing decision will be made regardless of such deferrals.
Satisfactory Standing - Students in satisfactory standing may proceed, with the following conditions:

All core courses in which D or F grades were obtained must either be repeated successfully (grade C or better) or be replaced by an alternative approved course which is completed successfully. All other courses in which F grades were obtained must either be repeated successfully at some point before graduation or be replaced by some alternative approved course which is completed successfully before graduation. Students in poor academic standing are strongly urged to contact the Faculty of Engineering, Student Affairs Office in the Engineering Student Centre to discuss their situation. An adviser is available to help guide students and to provide useful advice to help students achieve their goals. Helpful workshops are provided by Student Services, e.g., study skills, stress management, test anxiety. Students who are experiencing difficulties are encouraged to explore these avenues.

Probationary Standing - Students placed on Probationary Standing may proceed with their studies under the following conditions:

Students must reduce their credit load to a maximum of 13 credits per term and must achieve at the end of the term either a CGPA of 2.00 or better, or a term GPA (TGPA) of 2.50 or better in order to continue. If you have already registered for more than 13 credits, you are required to meet with an Adviser in your department/school in order to assist you in decreasing your credit load prior to the add/drop deadline of the subsequent term. A student whose TGPA is 2.50 or better, but whose CGPA is less than 2.00, may continue on with his/her studies but will remain on Probationary Standing. Failure to achieve either the TGPA or CGPA requirements noted above will result in the student being placed on "Unsatisfactory Standing" (see below). Students will remain on probationary standing until they achieve a CGPA equal to or exceeding 2.00, at which time their standing will be changed to "satisfactory". Students placed on Probationary Standing who need to reduce their credit load but are unable to drop course(s) must complete a Course Authorization Form and submit it to the Faculty of Engineering, Student Affairs Office in the Engineering Student Centre. The course(s) will then be deleted manually from the student's record.

Unsatisfactory Standing - Students who have been placed on Unsatisfactory Standing will be asked to withdraw from the Faculty of Engineering for a minimum of one term. Courses for which the student is currently registered will be deleted automatically from the student's record by the Faculty. Students whose most recent academic standing is currently unsatisfactory as indicated on Minerva, and who wish to return to the Faculty of Engineering after a compulsory absence of a minimum of one term away, must apply for readmission on Minerva, no later than November 1 (Winter term) and June 1 (Fall term), at www.mcgill.ca/engineering/student/sao/current/faculty_transfer_readmission. Upon readmission, the student will be placed back on Probationary Standing. While on probation the student must reduce his/her credit load to a maximum of 13 credits per term, and must meet or exceed a TGPA greater than or equal to 2.50 or a CGPA greater than or equal to 2.00. A student will remain on probationary standing until they achieve a CGPA greater than or equal to 2.00, at which time their standing will be changed to "satisfactory". Students who fail to achieve the required TGPA will be permanently withdrawn from the program with no chance of readmission. In addition, students who have returned to satisfactory standing, but whose CGPA falls below 2.00 in a subsequent term, will be required to permanently withdraw from the program with no chance of readmission.
g) **Readmission**

A student wishing to return after an absence of a portion of an academic year or more must make application in writing to the Office of the Associate Dean of Engineering (not to the Admissions Office) to be readmitted, stating the reasons for his/her absence from the University, giving a summary of activities during that period.

Students who withdrew because of illness must provide some indication that they are ready to resume studies.

h) **Summer Courses**

Summer course offerings are published in the Summer Session Announcement available in the early winter of the corresponding year. Normally very few engineering courses are offered. Chemistry 212 and 234 are usually offered. A considerable number of courses are offered in management (Faculty of Management) and in French (Faculty of Arts and Centre for Continuing Education). Note that prior approval must be obtained from the Academic Adviser for any course that is to count for degree credit.

Research Seminar Courses CHEE 494, CHEE 495, CHEE 496 and Project Courses CHEE 363 and CHEE 464 are also available in the summer if arrangements can be made with an academic staff member of the Chemical Engineering Department.

i) **Definition of Advanced Credit and Exemption**

Students who have previously taken a required course in the program may be granted advanced credit or exemption for that course. For exemption, the credits of the course must be replaced by an equal or higher number of credits of another course having the same accreditation category breakdown (e.g. Basic Science, Mathematics, Engineering Science, Engineering Design, Complementary Studies). No replacement is needed for advanced credits.

There is no equivalence between Science Math courses and Engineering Math courses for students who do not hold a degree in Science.

Computer courses taken outside McGill, while a student is registered in Engineering, do not count for credit.

j) **Pre-requisites**

Students must have the required pre-requisite in their academic history in order to register in a course through Minerva. In exceptional cases pre-requisites may be overridden for individual students by using the Student Registration Permit Override Form.
V. SPECIFIC PROGRAM REQUIREMENTS

A. GENERAL

a) Introduction

This Handbook states the rules applicable to students entering the first year of the program in September 2009 or January 2010.

b) Classification of Courses

The program includes several categories of courses:

1) Required Departmental courses
2) Technical Complementary (TC) courses
3) Required Non-departmental courses
4) Complementary Studies (CS)
5) Free Electives

Courses in categories 1), 2) and 3) are referred to as "core" courses.

c) Total and Distribution of Credit Requirements

See following pages.

**TOTAL** 111
d) **Departmental Technical Complementary courses**

The following courses are offered as Technical Complementary (TC). Consult Minerva for TCs that are offered in 2009/2010.

- CHEE 363, 464 Projects in Chemical Engineering
- CHEE 438 Engineering Principles in Pulp & Paper Processes
- CHEE 458 Computer Applications
- CHEE 494, 495 Research Project and Seminar
- CHEE 496 Environmental Research Project
- CHEE 541 Electrochemical Engineering
- CHEE 543 Plasma Engineering
- CHEE 561 Introduction to Soft Tissue Biophysics
- CHEE 562 Engineering Principles in Physiological Systems
- CHEE 563/MECH 563 Biofluids and Cardiovascular Mechanics
- CHEE 571 Small Computer Applications in Chemical Engineering
- CHEE 582 Polymer Science and Engineering
- CHEE 584 Polymer Processing
- CHEE 585 Foundations of Soft Matter
- CHEE 591 Environmental Bioremediation
- CHEE 592/MECH 534 Industrial Air Pollution Control / Air Pollution Engineering
- CHEE 593/CIVE 430 Industrial Water Pollution Control
- CHEE 594 Biocolloids in Environmental Systems
- CHEE 595 Energy Recovery, Use, & Impact

At least 2 Technical Complementary courses are to be selected from those offered by the Department or substitute courses as given in Appendix C. Permission is given to take the third complementary course from other suitable undergraduate courses in the Faculty of Engineering.

No more than 4 of the 9 Technical Complementary credits may be project courses such as CHEE 364, 464, 494, 495 and 496.

Students may wish to select their Technical Complementary courses to comprise an area of specialization. The department has four major areas of specialization (polymers, biochemical and biomedical engineering, pollution control and pulp and paper) which are discussed in the McGill Undergraduate Calendar at the end of the Faculty of Engineering section.
e) **Other Complementary Courses**

In selecting non-departmental complementary courses, students must verify with the department concerned that they have the pre-requisites and that they will be accepted for enrolment into the desired courses. Some departments place limits on enrolment and give preference to their own students.

Students registering in Continuing Education courses must report to the Centre for Continuing Education, presenting a completed form available from the Faculty Records Office.

The Faculty regulations for complementary course electives are summarized in Section 9.3.4 of the Faculty of Engineering Announcement in the University Calendar 2009/2010. In addition to the required courses, chemical engineering students must take 3 credits of the Impact of Technology on Society and 3 credits of Social Sciences or Humanities (HSS) (Appendix A). Out of province (High School) students need an additional 3 credits of pre-engineering Social Sciences and Humanities (SSH) requirement.

f) **Minors**

Minors are coherent sequences of complementary courses that may be taken in addition to the courses required for the B.Eng. or B.Sc. (Arch.) degree program. Minor programs normally consist of 18 to 24 credits, allowing up to 12 credits of overlap with the degree program. The real credit cost to the student is typically 9 to 18 credits, representing one semester beyond the B.Eng. or B.Sc (Arch.) degree program. All courses in a Minor program must be passed with a grade of C or better.

Minors are available to Chemical Engineering students in the following areas: Arts, Biomedical engineering, Biotechnology, Chemistry, Computer Science, Construction Engineering and Management, Economics, Environmental Engineering, Environmental Studies, Management, Materials Engineering, Mathematics, Physics, Technological Entrepreneurship, and Software Engineering. They are described in detail in Section 9.6 of the Engineering Announcement in the University Calendar 2009/2010.

As part of a pre-graduation procedure, students doing a Minor must provide proof that all requirements are fulfilled.

Note that students must pre-register early for Management courses. Preregistration forms are available from the Student Affairs Office (Room 22, Frank Dawson Adams Building).

Students intending to register for a Minor program must complete a form declaring their intent and submit it to Student Affairs Office, Rm 22, Frank Dawson Adams Building. If subsequently the plan is changed, it must be communicated in writing to the same office. Failure to do so may result in delayed graduation.
g) Course Exemptions for CEGEP Graduates

Chemistry courses

Exemption can be given for two courses:

- CHEM 212 (Intro. Organic Chem. I, 4 credits) for Chemistry 202 at CEGEP level
- CHEM 234 (Select. Top. Organic Chem. II, 3 credits) for Chemistry 302 at CEGEP level

The same or higher number of credits corresponding to a course exemption must be taken as any other basic science courses (e.g. Atmospheric and Oceanic Sciences, Biology, Chemistry, Earth and Planetary Sciences, Earth System Science, Mathematics or Physics) at McGill in addition to the regular elective load.

B. ADMISSION REQUIREMENTS

Note that the rules and the decisions on this question are handled by the Admissions Office. As part of a pre-graduation procedure, students must ensure that all admission requirements are fulfilled.

Placement Tests

Students may write a placement test only at the time of admission to McGill. They are available in Biology (BIOL 112), Chemistry (CHEM 111, CHEM 121, CHEM 212), Mathematics (MATH 140, MATH 141, MATH 133, MATH 260) and Physics (PHYS 131, PHYS 142). Up to 12 credits of material passed in placement tests may be classified as advanced credit i.e. the credits will not be transferred to other material. A grade of C or better is required to obtain credit. Credits above 12 will be treated as exemptions.

Tests will be available only during the week of registration and the week following.

C. TRANSFERS

The following policy applies for transfer of credits.

1) The maximum number of credits transferred into any Engineering Minor from studies completed prior to entering an Engineering Program, and taken outside McGill, be six (6).

2) The maximum number of credits transferred into any Engineering Minor from studies that have received prior approval and completed outside McGill after entering an Engineering Program be six (6).

3) The combined total number of credits transferred into any Engineering Minor under items (1) and (2) above be six (6).
a) **Transfer from Science Programs to the B.Eng. in Chemical Engineering Programs**

Students who have completed all or most of the requirements for the B.Sc. in Chemistry and other chemistry-oriented disciplines (Major or Honours) may qualify for admission to a reduced B.Eng. program. A typical program is listed in this Handbook.

b) **Transfer of Credits for Courses Completed Outside this Department**

Students must complete a minimum of 60 credits of program-related courses at McGill.

While registered in the B.Eng. program core courses may not be taken outside the department. Under exceptional circumstances, permission may be granted to take core course elsewhere. See your Adviser for information.

c) **Summer Session Forms**

Students who wish to take courses at other universities which they want counted towards their B.Eng. requirements should obtain and submit the Authorization of Courses for Exemptions and/or Advanced Credits form to the Engineering Student Center (Rm. 22, Frank Dawson Adams Building). This serves as the written approval form for the Host University upon authorization by the Academic Adviser. Once the transcript of the completed course from the Host University is received by the Engineering Student Center it is matched with the approval form and placed in the student's file.

D. **RECORDING OF COURSE EXEMPTIONS OR ADVANCED CREDIT**

It is the responsibility of students to request such course exemptions or advanced credit and to ensure that they are properly recorded in the department and the Faculty.

For courses completed at other institutions, Students should request exemptions or advanced credits using the appropriate form (“Authorization of Courses for Exemptions and/or Advanced Credits”) available at the Engineering Student Center (Rm. 22, Frank Dawson Adams Building). This must be completed by the student, signed by their departmental adviser, and submitted to the Engineering Student Center for approval by the Associate Director.

A request can only be considered granted and recorded when it appears on the transcript or course verification form.

(Please refer to [www.mcgill.ca/engineering/student/sao/newstudents/credit](http://www.mcgill.ca/engineering/student/sao/newstudents/credit) for details and the process on obtaining transfer credit.)
• All pre-engineering courses must be completed preferably in the first year of studies or soon thereafter. They must not be deferred to the third or fourth years of studies.

• Students are responsible to ensure that they meet the course requirements for the B.Eng. They must complete the appropriate check list (p. 25 or 26) and demonstrate to their Adviser that they meet the degree requirements in each category of courses e.g. core, technical, minor program, free complementaries etc.

• Students must meet their Academic Adviser and verify their final year course selection prior to the commencement of their U-3 year. Timetable conflicts may cause difficulties in some cases if course selection is not planned well in advance.

Total Credits: 17

---

* Students having successfully completed a calculus course in High School may take Calculus A (MATH 150) and Calculus E (MATH 152). Students passing MATH 150 & 152 will receive exemption with credit for MATH 262 (Intermediate Calculus). In the event that the student has some prior calculus, but is not sufficiently confident to proceed with MATH 150/152, the appropriate sequence is MATH 140/141. If a student has no previous calculus exposure, MATH 150/152 may be replaced with MATH 139/141.

**One “Impact of Technology on Society” course, and two Humanities and Social Sciences courses.
d) 72-Credit Program for Students from Science Faculty Program

1) Chemistry Programs: Students who have completed at least the U2 level McGill B.Sc. program in Chemistry, or the equivalent, will normally have completed most of the equivalences noted below. Students who at the time of transfer have completed only part of the math equivalence may choose to take the missing courses in the Faculty of Science or to take the equivalent courses in the Faculty of Engineering. The typical 72-credit program outlined in the following page considers that the student has passed MATH 315 and the equivalent courses for MATH 260/265; that the student has 6 credits in allowable complementary studies courses and has courses with laboratory component equivalent to CHEE 291.

2) Biochemistry, Biology, Mathematics and Physics Programs: Students from these programs in Faculty of Science also qualify for a credit allowance, the exact number of credits depending on which of the courses on the left below have been taken.

NOTE: Science transfer students can replace up to 6 credits of Technical Complementaries with 6 credits of previously taken 400-level (or equivalent) science courses approved by the Adviser.

</tbody>
</table>

Total Credits: 73

Programs of those who have studied Chemistry at other universities must be examined in detail to determine how many credits, up to the maximum of 45, may be allowed in their case.

Note that Technical Paper I and II can be taken in either semester, but not simultaneously as the former is a pre-requisite for the latter.

Although the above program, in some instances, does not respect the course pre-requisites, they are upheld where possible. Students admitted with advanced standing should, with their Adviser, plan a program in the awareness of the possible difficulties of taking courses out of the pre-requisite sequence. The Adviser must approve this action.
Six credits of Complementary Studies are required in addition to the core courses of the program; of these, 3 credits must be chosen from the list "Impact of Technology on Society Courses" below and the remaining 3 credits must be taken from A, B, or C below. Out of province (High School) students need to take an additional 3 credits of pre-engineering courses from A, B or C below.

**Impact of Technology on Society Courses**
