

### Equipment Training Certification

Prior to using any potentially hazardous equipment, apparatus, device, or material, students must acquire training related to proper and safe usage. This training must be conducted by personnel appropriate to the equipment and area in question. "After hours" use of such equipment requires separate approval.

For work involving potentially hazardous equipment or procedures (as determined by Academic Supervisor or Laboratory Manager), there must be at least two people in the laboratory at all times. If a companion is not deemed necessary, the student should maintain contact with someone working on the same floor. If this is not possible, the student must inform Campus Security (x3000) of their presence in the laboratory, including arrival and departure times.

All completed forms must be submitted to the Departmental Safety Coordinator prior to commencing work.

Any student found using equipment without proper consent (via this form) may face disciplinary action.

Student Name:	Student ID:	Laboratory (Room #):
Equipment:	Companion Needed?  YES      NO  To be determined by Academic Supervisor and Laboratory Manager.	WHMIS Certified?  YES      NO  All personnel working in McGill laboratories are required to hold valid WHMIS certification.
<input type="checkbox"/> I have received training on the operational procedures for this equipment.  <input type="checkbox"/> I have received training regarding the safety issues related to this equipment.  <input type="checkbox"/> My ability to operate this equipment has been confirmed through direct observation.
