

Leacock Amphitheatre

Project 15-056

Current conditions

Deterioration of:

- Underground concrete structure (roof to basement of Leacock Building), west and south of building
- Exterior stairwell
- Building foundation
- Exterior columns (three sides W-S-E)
- Exterior glass walls (« curtain wall »)

Project description

- Repair structural slabs beneath the terraces, improve waterproofing
- Repair foundation and retaining walls
- Repair columns and precast concrete elements of envelope
- Replace exterior glass walls ('curtain walls')
- Replace foot grills at various entrances

Project description (cont'd)

- Demolish and rebuild exterior staircase
- Redesign west-side terrace as multi-purpose exterior amphitheatre
- Redesign west-side (upper) terrace on single level to provide reduced-mobility access on west side
- Water retention on terraces and green spaces

Community impact

- Noise, vibrations & dust
- Pedestrian traffic rerouted through McTavish Gates
- Access to building maintained at all times
- Relocation of classes
