

# Income Distribution

## ECON 473

Markus Poschke

McGill University  
Fall 2021

### Course description and objectives

Income inequality has been a topic of long-standing interest to economists. Its importance to society is hard to overstate. Recent increases in income inequality in many developed countries, as well as policy changes, have heightened this interest.

The purpose of this course is to develop a theoretical understanding of the ideal distribution of income, consumption and wealth; to build on this to develop methods of measuring inequality; to translate these tools into empirical analysis of data; to analyze potential determinants of changes in income distribution; and to discuss the theory and empirics of redistributing income.

### Learning outcomes

You will learn how to use and understand others' use of measures of inequality; how inequality has evolved and how it differs across countries; what factors are the most likely drivers of inequality; and what the effects of potential policy responses might be.

You will practice how to work with microeconomic data using Stata, to analyze inequality and to conduct regression analysis. This skill is useful for many other contexts. You will practice how to theoretically analyze economies with heterogeneity, both with a positive and a normative perspective. You will see how theory informs empirical analysis, and how empirical findings prompt progress in the formulation of theories.

### Administrative Issues and Course Structure

3 credits

**Contact:**

email: markus.poschke@mcgill.ca

**Classes.** Mon/Wed 11.35am-12.55pm in Leacock 110.

This course will be in person. The classroom does not have lecture recording equipment. I therefore strongly encourage you to come to class. If there is a legitimate factor that prevents you from attending class, please let me know as soon as possible.

**Office hours.** Mon 1.30-3.30pm, via Zoom. (Link on *mycourses*.) I will use the waitroom feature. Should office hours become very busy, I will switch to a sign-up system. If you intend to come to office hours as a group, please let me know so I can admit you together.

**Prerequisites and tools:** *ECON 230 or ECON 250; ECON 227 or ECON 257 or equivalent; Calculus 1 and 2.*

The theoretical part of the course uses both differential and integral single-variable calculus in analyzing social welfare functions and inequality measures. The empirical part of the course requires the ability to run ordinary least squares regressions and to interpret their results. More advanced knowledge of econometrics is helpful but not required. The course will make use of some economic tools you may have already encountered in intermediate micro, related to insurance, taxation, labor supply and utility possibility frontiers; these will be reviewed in class. Although macro is not a prerequisite, you may also encounter some concepts that students who have taken intermediate macro would be familiar with.

Several problem sets will require the use of the statistical program **Stata**. Stata is the statistical software used by most empirical economists. Its great advantage for the purpose of this course is that users have programmed various measures of inequality and poverty that can be downloaded (if you have write permission in the applications folder of your computer) and used. Knowledge of Stata is not a prerequisite for this course. I will post a separate document on how to use Stata at McGill on *mycourses*. To get started with Stata, consult the resources list below. I am recruiting a dedicated Stata assistant for the class. He will hold three lectures introducing you to Stata, on Sep 13, Sep 20 and Oct 14, and provide support to you after that. We will also both from time to time demonstrate in class how to do various things using Stata.

**Course materials:** There is no textbook covering all class topics. Some of the material on measurement is covered in Frank Cowell (2011), *Measuring Inequality*, 3rd edition, Oxford University Press (e-book available; referred to as C below). You may also be interested in *Capital in the 21st Century* by Thomas Piketty.

Most of the course will be based on journal articles. I will post the articles on *mycourses* as we go along. I will also make class notes (slides) available. Warning: The list of articles in the course outline is incomplete.

Continuous class attendance is strongly encouraged. Any points raised in class can end up in the examinations.

Finally, I will occasionally post links to news articles on Twitter (@mposchke) or on *mycourses*. These are for your background information and not required reading, except for the ones that I may from time to time discuss in class.

***mycourses:*** I will use *mycourses* for posting relevant materials such as readings and problem sets and for making announcements. You should therefore regularly check the course's *mycourses* page. You may also want to download the *myCourses Pulse* mobile app to stay connected.

**Evaluation:** The grade for the course will be based on three assignments, an essay, a final exam, and class participation.

The *final exam* will account for 50% of the grade and will take place in the end-of-term exam period. It will be an in-person, closed book exam. If you miss the exam due to medical reasons, the usual McGill procedures apply.

There will also be three individual *assignments*. Each assignment accounts for 10% of the total course grade. These assignments will involve working with actual individual and household level data using Stata. (You may use other software if you prefer.) You will analyze these data in a guided way, generate results, and be asked to interpret them and compare them to other evidence discussed in the course. I will give detailed instructions for each assignment in due time. The required coding skills for data analysis will mostly be covered in the Stata introduction sessions in the course. You will need to submit results in writing. The deadlines for the assignments most likely will be Sep 29, Oct 20 and Nov 3. No late assignments will be accepted.

There will also be an essay, accounting for 15% of the total course grade. The deadline for the essay most likely will be Nov 17. Your short essay will need to use empirical and theoretical elements covered in the course, and use them to support a well-argued opinion.

Finally, your class participation accounts for the final 5% of the grade. This includes asking and answering questions in class and actively participating in discussions.

**Stata resources.** There are tons of online resources on data analysis with Stata, or Stata more generally. A web page with links to lots of useful resources for economists (going far beyond what you need in this course) is <https://www.stata.com/links/resources-for-learning-stata/>.

**Two complementary events:** With three colleagues, I have organized two interdisciplinary events on inequality this term, entitled “Cross-Disciplinary Perspectives on Inequality”. The first one, on Sep 21, 3-4.30pm, is on “Inequality and Institutions”. The second one, on Nov 26, is on “Redistribution and Fiscal Policies”. Both events will bring together a set of distinguished speakers. I strongly encourage you to attend them. Further info to follow.

**University statements:** In case of absence at the final exam for medical reasons, please refer to the University Regulations Concerning Final Examinations. Note: According to Senate regulations, instructors are not permitted to make special arrangements for final exams. Please consult the Calendar, section 4.7.2.1, General University Information and Regulations at [www.mcgill.ca](http://www.mcgill.ca).

McGill University values academic integrity. Therefore, all students must understand the meaning and consequences of cheating, plagiarism and other academic offences under the Code of Student Conduct and Disciplinary Procedures (see <http://www.mcgill.ca/students/srr/honest/> for more information).

L’université McGill attache une haute importance à l’honnêteté académique. Il incombe par conséquent à tous les étudiants de comprendre ce que l’on entend par tricherie, plagiat et autres infractions académiques, ainsi que les conséquences que peuvent avoir de telles actions, selon le Code de conduite de l’étudiant et des procédures disciplinaires (pour de plus amples renseignements, veuillez consulter le site <http://www.mcgill.ca/students/srr/honest/>).

In accord with McGill University's Charter of Students' Rights, students in this course have the right to submit in English or in French any written work that is to be graded.

Conformément à la Charte des droits de l'étudiant de l'Université McGill, chaque étudiant a le droit de soumettre en français ou en anglais tout travail écrit devant être noté.

As the instructor of this course I endeavor to provide an inclusive learning environment. However, if you experience barriers to learning in this course, do not hesitate to discuss them with me and the Office for Students with Disabilities, 514-398-6009

No audio or video recording of any kind is allowed in class without the explicit permission of the instructor. The use of Mobile Computing and Communications Devices devices must, in all cases, respect policies and regulations of the University, including in particular the Code of Student Conduct and Disciplinary Procedures; the Policy Concerning the Rights of Students with Disabilities; and the Policy on the Responsible Use of McGill IT Resources.

Instructor generated course materials (e.g., handouts, notes, summaries, exam questions, lecture and class recordings etc.) are protected by law and may not be copied or distributed in any form or in any medium without explicit permission of the instructor. Note that infringements of copyright can be subject to follow up by the University under the Code of Student Conduct and Disciplinary Procedures.

End-of-course evaluations are one of the ways that McGill works towards maintaining and improving the quality of courses and the student's learning experience. You will be notified by e-mail when the evaluations are available. Please note that a minimum number of responses must be received for results to be available to students.

In the event of extraordinary circumstances beyond the University's control, the content and/or evaluation scheme in this course is subject to change.

## Course outline

The course outline is subject to revisions, the order of topics may be changed, and topics may be dropped or added depending on the pace of the course. I have made the outline very detailed to give you a good impression of what to expect. Note: The list of references to articles is incomplete.

week	topic/event
1	Introduction, measurement <i>Inequality: an overview</i>
2	<i>Stata intro 1</i> ; a snapshot of current distributions of earnings and income (Díaz-Giménez et al. 2011, Piketty and Saez 2007)
3	<i>Stata intro 2</i> ; recent developments (Heathcote et al. 2010) <i>Causes of wage inequality</i>
4	The relative-demand/relative-supply framework (Katz and Murphy 1992, Autor et al. 2008)
5	Skill-biased technical change and the college wage premium
6	<i>Thanksgiving; Stata intro 3</i>
7	Capital-skill complementarity (Krusell et al. 2000)
8	Labor market polarization (Autor and Dorn 2013) <i>Theory</i>
9	Utilitarianism and Social Welfare Functions (C 1 & 3)
10	The leaky bucket: a thought experiment (C 1)
11	A short introduction to optimal redistribution (Diamond and Saez 2011) <i>Recent developments</i>
12	Robots
13	The top 1%
