

**EDKP- 206 BIOMECHANICS OF HUMAN MOVEMENT (CRN 962)****Department of Kinesiology & Physical Education, McGill University****JANUARY-APRIL 2021**

**INSTRUCTORS:** **David J Pearsall**, PhD, Associate Professor  
 Office: Currie Memorial Gymnasium, Room A215  
 Phone: (514) 398-4400 extension 0472  
 email: [david.pearsall@mcgill.ca](mailto:david.pearsall@mcgill.ca)

**Teaching Assistants:** Julien Clouette, Taylor Leger, Caitlin Mazurek  
**Graders:** Harry Brown, Matthew Kelly, Gabrielle Thibault, Samuel Tremblay

**COURSE LOCATION and TIME**

Please note that all lectures and labs will be delivered via Zoom.

Lectures

Though the lecture is officially scheduled on Mondays 12:35-2:55pm, lectures will be pre-recorded and posted on myCourses 48-72 hours in advance of the scheduled time. We recommend viewing this content prior to the synchronous portion of the course.

*Synchronous student participation is expected via Zoom from 1:55pm-2:25pm on the day of each lecture.*

Labs

Labs are officially scheduled on Thursdays as follows: Section 1 11:35-1:25pm, Section 2 1:35-3:25pm, Section 3 3:25-5:25pm.

**Unless otherwise noted**, asynchronous lab material will be recorded and posted on myCourses 48-72 hours in advance and *synchronous student participation is expected via Zoom during the following times:*

Session 1 – 12:20-1:25pm                      Session 2 – 2:20-3:25pm                      Session 3 – 4:20-5:25pm

**REQUIRED TEXT, READINGS and MATERIALS:**

Oatis, Carol (2017) *Kinesiology: The Mechanics & Pathomechanics of Human Movement*. 3rd ed.

*Required and recommended readings are listed for each weekly lecture and lab session in the course calendar.*

*Scientific calculator*

**Description:**

This course applies general principles of mechanics and math to analyze human movement. Students will explore the development of forces within muscles, the strength properties of bones, the variety of joint designs and resulting different rotational degrees of freedom, and how all of these initiate and control human movement. These concepts will be applied to understand human posture and movement mechanics along a continuum from athletic to normal to pathological, and across the lifespan from child to adult to elderly.

**COURSE DETAILS**

**Learning Format:** Lecture, Lab  
**Contact Hours:** 2 hr Lectures, 2 hr Lab per week  
**Semester Length:** 13 weeks  
**Prerequisite background courses** PHYS 101 or PHYS 1313.

**COURSE CURRICULUM****Learning Outcomes**

Upon completion of this course, students will be able to:

1. Apply knowledge of human anatomy to describe human movement in both anatomical and mechanical terms.
2. Describe the mechanical properties of the tissue building blocks of the musculoskeletal system
3. Describe the fundamental mechanical principles applicable to analyzing human movement and posture.
4. Describe tools (hardware, electronics, software) used to acquire and quantify human movement and show an understanding of their diagnostic strengths and limitations.
5. Discuss the biological and physical mechanisms related to
  - a. Independent daily living functions
  - b. Manifestation of injury as they relate to internal and external forces
  - c. Augmentation of human function by physical and athletic training
  - d. Children, adults and elderly

- e. Motor control
6. Derive and solve equations of human motion in two dimensions.
7. Draw and use the concept of a free-body diagram as it applies to human movement.
8. Explain how forces are generated by the muscle-tendon complex.
9. Interpret graphs and simple models used to explain human movement.
10. Apply related peer-reviewed research to interpret data collected.
11. Apply active learning, critical thinking, and problem solving skills in the qualitative analysis of human movement.

## **COURSE CONTENT**

### **1. Anatomical concepts to describe human movement**

- 1.1. Movements in the sagittal, frontal and transverse planes.
- 1.2. Movements occurring about the medio-lateral, antero-posterior and longitudinal axis.
- 1.3. Muscle, bones and joints with the correct terminology.
- 1.4. Degrees of freedom at a joint based on its anatomy.
- 1.5. Proper terminology to describe human movement.

### **2. Describing human movement – Kinematics**

- 2.1 Kinematic variables using vector analysis to quantify human movement.
- 2.2 Problems in 2-dimensions involving: displacement, velocity, acceleration, time.
- 2.3 Factors that affect the trajectory of a projectile.
- 2.4 Free-body diagrams to illustrate the variables that affect the trajectory of a projectile.
- 2.5 Graphical interpretation to determine relationships between kinematic variables in 2-dimensions.
- 2.6 Peer-reviewed research applied to the interpretation of kinematic data.
- 2.7 Tools used to acquire human movement data.

### **3. Forces that change motion – Kinetics**

- 3.1. Kinetic variables to the quantification of human movement.
- 3.2. Problems in 2-dimensions involving: mass, force, friction, acceleration, moment of inertia, work, power, energy, momentum and impulse for both linear and angular movements.
- 3.3. Free-body diagrams to understand the net effect of forces on a body or system. These free-body diagrams are used to solve problems involving balanced or unbalanced forces and objects on inclined surfaces.
- 3.4. The role that play internal and external forces in the development of acute and chronic injuries.
- 3.5. Graphical interpretation to determine relationships between kinetic variables.
- 3.6. Peer-reviewed research applied to the interpretation of kinetic data.
- 3.7. Kinetic data collection with the appropriate tools.

### **4. Muscle-Tendon Complex (MTC) – generators of force**

- 4.1. The elements of the human musculo-skeletal system and how the system's properties interact during human movement.
- 4.2. How muscles generate forces and their effect on the structures surrounding them.
- 4.3. Concepts of force-length, force-velocity, hysteresis, compression, tension, shear, strain and Young's Modulus to explain musculo-skeletal adaptation.
- 4.4. The interaction of the mechanical properties of the musculo-skeletal system as they affect human movement.
- 4.5. Collecting data using surface electrodes over appropriate anatomical landmarks during a range of human movements.
- 4.6. The conceptual framework for EMG analysis of human movement and the physiological and biomechanical basis for recording electrical potentials from striated muscles using surface electrodes.

### **Methods of Instruction**

- Lecture
- Discussion group
- Audio-visual presentations
- Labs – data collection, analysis and presentation
- Critical thinking and problem solving
- Work stations
- Demonstrations

**EVALUATION SUMMARY**

Evaluation will be carried out in accordance with McGill University policy.

The instructor will present a written course outline with specific evaluation criteria at the beginning of the semester.

Evaluation will be based on the following criteria:

Assignment	Due Date	% of total grade
Participation	Jan 18, Feb 4, Feb 15, Mar 25, Apr 8	5%
Reports (5% x 4)	Feb 1, Mar 8, Mar 29, Apr 16	20%
Midterm Exam	Week 7 – Feb 22	25%
Group Project	Presentation recordings due Apr 12	15%
Final Exam	TBD	35%

**Participation:** Participation will be scored based on *completion* of participation “quizzes”. These will be corrected to provide feedback for students, but grading will be based on completion rather than correctness. Participation is worth 5% of the total course grade.

**Reports:** You are required to submit four reports which track your progress in the course (approximately every three weeks; see calendar). Reports should be typed using Microsoft Word templates that are available on myCourses; there are separate templates for Reports 1, 2, 3, and 4. They should be submitted via myCourses by the due dates listed on myCourses and in the calendar. Up to 5 points will be awarded per report (20 points total), based on one’s level of engagement, timely progress, and thoughtfulness.

*Discussion Board Posts (Reports 2 & 4):* To help facilitate student engagement, we will be using the Discussion Board within myCourses. Each student is expected to write at least two brief posts – one in the first half of the term and one in the second half. Posts should be brief and can include, for example, (a) insights or information that stand out to you in your course engagement, (b) a brief summary of an academic article you found interesting, (c) a brief summary of a news article or other media to bring to your classmates’ attention. Students are encouraged to comment on posts and engage with each other through the Discussion Board, and you are also welcome to write additional posts if you wish.

**Midterm Exam:** This exam is composed of multiple-choice questions, short answer, and calculation questions intended to assess students’ learning of lecture and lab content. The midterm exam includes a combination of lab and lecture material from week 1 to week 6 of the course. The midterm exam is worth 25% of the total course grade.

**Group Project:** The final group project assesses the students’ understanding of key biomechanical concepts, the ability to assess existing scientific literature, and think critically to create a research question. Students will work in groups to create a biomechanical research question related to a selected topic. Students will be responsible for an oral presentation recorded in advance via Zoom and submitted via myCourses by April 12. Presentation should include the following: literature review (including knowledge gap), research question, hypothesis, and proposed methods (including participant information, data collection procedures, rationale for biomechanical analysis methods, and limitations).

In addition to your presentation video, each group will submit one brief Word document listing the contributions of each individual group member to the project.

**Final Exam:** This exam will be comprised of multiple-choice questions, short answer, and calculation questions intended to assess students’ learning of lecture and lab content. The final exam will be a cumulative exam including a combination of lab and lecture material from the entire course with emphasis placed on weeks 8-12. The final exam is worth 35% of the total course grade.

**IMPORTANT DATES AT MCGILL:** <https://www.mcgill.ca/importantdates/key-dates>

- **Classes begin:** [Thursday, January 7](#)
- **Study break:** [from March 1-5](#) (some exceptions apply)
- **Makeup Day:** Thursday, April 15<sup>3</sup>
- **Classes end:** [Friday, April 16](#)
- **Study Days:** Saturday, April 17 and Sunday, April 18
- **Exams begin:** [Monday, April 19](#)
- **Exams end:** [Friday, April 30](#) (10 days, including evening exams)

If your course has a schedule pattern of:	Your first class is on:	Your last class is on:
Monday (M) lecture Thursday (Th) lab	Monday, Jan. 11 Thursday, Jan. 14	Monday, Apr. 12 Thursday, Apr. 15

Other important dates built around the Key Academic Dates include:

- **Deadline to cancel registration:** [Thursday, December 31](#)
- **Deadline to register without penalty** (new students only): [Monday, January 4](#)
- **Add/Drop deadline:** [Friday, January 22](#)
- **Course or University Withdrawal with refund deadline:** [Friday, January 29](#)
- **Course or University Withdrawal WITHOUT REFUND deadline:** [Tuesday, March 9](#)

Legal holidays

Administrative offices are closed on the following dates:

- **Good Friday:** April 2, 2021
- **Easter Monday:** April 5, 2021

**ACADEMIC STATEMENTS:**

*In accord with McGill University's Charter of Students' Rights, students in this course have the right to submit in English or in French any written work that is to be graded. This right applies to all written work that is to be graded, from one-word answers to dissertations. Instructor addition: French/English dictionaries will be permitted during exams (however, supplemental notes marked within the dictionary will not be tolerated, see following statement of academic integrity).*

*McGill University values academic integrity. Therefore all students must understand the meaning and consequences of cheating, plagiarism and other academic offences under the Code of Student Conduct and Disciplinary Procedures (see: [www.mcgill.ca/students/srr/honest/](http://www.mcgill.ca/students/srr/honest/) for more information).*

*L'université McGill attache une haute importance à l'honnêteté académique. Il incombe par conséquent à tous les étudiants de comprendre ce que l'on entend par tricherie, plagiat et autres infractions académiques, ainsi que les conséquences que peuvent avoir de telles actions, selon le Code de conduite de l'étudiant et des procédures disciplinaires (pour de plus amples renseignements, veuillez consulter: [www.mcgill.ca/students/srr/honest/](http://www.mcgill.ca/students/srr/honest/)).*

*Instructors who may adopt the use of text-matching software to verify the originality of students' written course work must register for use of the software with Educational Technologies ([support.ist@mcgill.ca](mailto:support.ist@mcgill.ca)) and must inform their students before the drop/add deadline, in writing, of the use of text-matching software in a course.*

**ACADEMIC EXPECTATIONS:**

- Please turn on camera during live lecture and lab sessions to enhance class engagement
- Check MyCourses for notes prior to attending lecture
- Please read the recommended text. It will add to the framework of class slides.
- **\*\*If you do not understand something, please ask!\*\***
- Requests for supplemental assignments to raise grades will NOT be accepted

**LAND ACKNOWLEDGEMENT:**

*McGill University is situated on the traditional territory of the Kanien'kehà:ka, a place which has long served as a site of meeting and exchange amongst many First Nations including the Kanien'kehà:ka of the Haudenosaunee Confederacy, Huron/Wendat, Abenaki, and Anishinaabeg.*

## TENTATIVE COURSE SCHEDULE EDKP 206 2021

Week	Date	Topic (lecture/lab)	Prior to Class	Out of Class
1	Jan 11	Introduction to Biomechanical Analysis Mechanical Properties of Materials Biomechanics of Bone	Oatis Ch. 1-3 What Is Biomechanics (YouTube)	
	Jan 14	Free body diagrams: intro to force & moments	**Need calculator** Review Oatis Ch. 1	Participation Quiz 1 Week 1 Problem Bank (optional)
2	Jan 18	Biomechanics of Tendons and Ligaments	Oatis Ch. 6 <b>Submit Participation Quiz 1</b>	
	Jan 21	Free body diagrams: calculating joint reaction forces and moments	**Need calculator**	Week 2 Problem Bank (optional)
3	Jan 25	Biomechanics of Cartilage	Oatis Ch. 5	
	Jan 28	Work, Power, & Energy	Crash Course Video (YouTube)	Complete Report 1 Participation Quiz 2 Week 3 Problem Bank (optional)
4	Feb 1	Biomechanics of Skeletal Muscle Electromyography	Oatis Ch. 4 <b>Submit Report 1</b>	
	Feb 4	Electromyography (EMG)	<b>Submit Participation Quiz 2</b>	Week 4 Problem Bank (optional)
5	Feb 8	Hip structure, function, analysis of forces during activity	Oatis Ch. 38-40	
	Feb 11	Ground Reaction Force/Balance/Centre of Pressure		Participation Quiz 3 Week 5 Problem Bank (optional)
6	Feb 15	Knee structure, function, analysis of forces during activity	Oatis Ch. 41-43 <b>Submit Participation Quiz 3</b>	Week 6 Problem Bank (optional)
	Feb 18	Midterm review		
7	Feb 22	Midterm		
	Feb 25	No labs		Complete Report 2
March 1-5		<b>Reading Week</b>		

Week	Date	Topic (lecture/lab)	Prior to Class	Out of Class
8	Mar 8	Ankle & foot structure, function, analysis of forces during activity	Oatis Ch. 44-46 <b>Submit Report 2</b>	
	Mar 11	Walking/Running Gait Video Analysis & Interpreting Gait Waveforms		Week 8 Problem Bank (optional)
9	Mar 15	Characteristics of Normal Gait Inverse Dynamics Running Mechanics	Oatis Ch. 47, 48	
	Mar 18	Qualitative kinematic video analysis	Download Kinovea	Participation Quiz 4 Week 9 Problem Bank (optional)
10	Mar 22	Lumbar spine structure, function, analysis of forces during activity Normal posture and postural abnormalities	Oatis Ch. 32-34	
	Mar 25	3D Motion Capture + create groups for project	<b>Submit Participation Quiz 4</b>	Complete Report 3 Week 10 Problem Bank (optional)
11	Mar 29	Shoulder structure, function, analysis of forces during activity Elbow structure, function, analysis of forces during activity	Oatis Ch. 8-10 Oatis Ch. 11-13 <b>Submit Report 3</b>	Week 11 Problem Bank (optional)
	Apr 1	Introduce Group Project		
12	Apr 5	Wrist & hand structure, function, analysis of forces during activity Mechanics and patho-mechanics of pinch & grasp	Oatis Ch. 14-16, 19	Participation Quiz 5 Week 12 Problem Bank (optional)
	Apr 8	Group Project Prep	Email finalized groups and topic to TA	<b>Submit Participation Quiz 5 by 6pm on April 8</b>
13	Apr 12	Final Review	<b>Submit presentation recordings</b>	Complete Report 4, <b>due April 16</b>
	Apr 15	No class meeting – watch presentations		
	TBD	FINAL EXAM 35% between April 19 to 30
