Assistant Professor of Surgery, McGill University.
Hepato-Pancreato-Biliary and Transplant Surgeon, MUHC
Leader, Quebec Pancreas Cancer Program

MODEL: We provide a team model approach to assessment and treatment of NeuroEndocrine malignancies and have established a comprehensive database and experience with a large number of patients diagnosed with Neuroendocrine Tumour Liver Metastases.

REFERRALS:

- Our multidisciplinary team can either help with diagnosis and treatment options: medical, surgical, radiologic and through targeted nuclear and radiotherapeutic options, for patients suspected of having neuroEndocrine tumours.
- We can either (1) take over management of patient or (2) render a NET tumour board opinion. Please specify.
- We offer access to ongoing clinical trials in the management of NeuroEndocrine tumour.
- **For surgical consideration:** All cases with local disease, including locally advanced disease. Patients will be evaluated as to whether they are candidates for resection or liver directed therapy.
