

## Gas-Leak Detector

Gas-leak detectors are high quality instruments in the program of T&D Messtechnik. Used in cooling and air conditioning industry, even SF<sub>6</sub>-gas in the high voltage switchgear industry, you can build on reliable devices.

### Electronics Halogen Leak Detector

HI300 CPU-C • HI300 CPU-1F • HI300 CPU-1G

The new „HI300 CPU “- series brings you already the technology of the future at present day. We did not only change the design, we also increased the technical functions of our leak detectors. The innovative MPC circuit technology and the modern digital signal working are monitoring the sensing tip up to 8000 time per second. Automatic resetting, a clean mechanical pump and visual display devices accelerate and simplify the search for leaky places. A completely newly conceived sensor increases sensitivity, improves the reliability and last for two times longer than the former one. Finally longer availability and lower maintenance costs.

### Features:

- Mikroprocessor-control, with Advanced Digital Signal Processing
- Battery Voltage Indication
- Certifiet nach SAE J1627
- To 18-Level and tricolor leak alarm
- Real time sensitivity adjustment
- Detects all Halogenated gases with maximum up to 3g/yr
