Data-Analysis in the Time of Cholera & COVID-19

Wednesday, January 13, 2021
3:30 pm – 4:30 pm – [Zoom Link](#)

Abstract:

I will present, and comment on, some of the analyses of data from the 1849 Cholera Epidemic in England/London and the South London data from the 1854 Epidemic. I will evaluate the validity of the 'excess mortality' method when applied to the 1849 data, and show applications to the 1918-19 and 2020 Epidemics.
