UNDERGRADUATE RESEARCH ASSISTANT POSITIONS – SUMMER 2024

Our group is looking for undergraduate research assistants to help with the establishment of several new field sites in Southern Quebec. The new sites will allow us to monitor soil moisture, shallow groundwater, plant moisture content, plant transpiration, streamflow, and streamwater chemistry in response to a range of (extreme) weather events.

You are an ideal candidate if you:
- Are a student enrolled in a Geography, Earth Science, Environment, or Civil Engineering program
- Enjoy being outdoors and do not mind getting wet and dirty
- Are eager to learn more about field data collection and processing
- Have recently taken a hydrology or water-related course
- Have a valid driver’s license

What the job will entail:
- Working from late April to mid-August 2024
- Juggling lab work and field work
- Analyzing data (software-specific training will be provided if needed)

The experience you will gain includes:
- Basic field and/or instrumental skills
- Data-crunching skills

Number of positions to be filled: 2 or 3**

** Small research projects can be designed for students applying for NSERC USRAs or SURAs, and for prospective Honours thesis students

Interested? Contact Dr. Genevieve Ali (genevieve.ali@mcgill.ca)

N.B.: To be officially considered, please email your resume and unofficial transcripts. Review of applications will start on February 7, 2024
