

Mount Sinai Hospital

Mount Sinai Hospital is a community based hospital having a palliative care unit, pulmonary rehab and longterm care beds. In addition to working on the palliative care unit at Mount Sinai, the resident will be exposed to the care of 20 home-based palliative care patients. As well, during this month, the resident will accrue 2 to 3 homecare patients for which he/she will be responsible during the rest of the year; protected time will be offered during other rotations to ensure the resident has time for homecare visits of his/her patients as needed.
