# Mixing qualitative research and randomized controlled trials: why and how?

Pierre Pluye, MD, PhD, Professor

Roland M Grad, MD, CM, MSc, FCFP,  
Associate Professor

Tibor Schuster, PhD, Associate Professor

As a result of attending this seminar, participants will be able to describe main mixed methods designs integrating qualitative research and randomized controlled trials. A rationale for such integration will be proposed. Based on a literature review, three strategies for integrating these methods will be presented. Then, presenters will describe concrete examples (primary mixed methods research and systematic mixed studies review). Finally, this presentation will be discussed in line with advanced knowledge on observational and experimental studies.
