

MCGILL FAMILY MEDICINE RESEARCH SEMINARS

“Big Participatory Research”

Neil Andersson, MD, PhD

Dr. Neil Andersson is a physician-epidemiologist and current director of Participatory Research at McGill (PRAM). He coined the term Big Participatory Research as part of a response to the Big Problems of the day, including the HIV pandemic, youth suicide, gendered violence, obesity, dementia associated with aging, resistant arboviral vectors spreading to urban areas and, in all of these and other areas, failure of public services to reach those who are most in need. Big Participatory Research applies participatory tools and activities to a range of services and enterprises, to interventions and, beyond its usual place in small-scale local projects, to large scale multi-disciplinary research. Across many if not all sectors, people expect to have a say in matters that affect them; managers of services delivery, governments and industry need reliable ways to hear end-user voices and to find common ground with stakeholders on quality improvement. In education, participatory research activities are relevant not just to engage learners with special needs, but to nearly all learners and their families.

Thursday September 13, 2018
From 12:30-2:00 p.m.
Department of Family Medicine
5858 ch. de la Côte-des-Neiges, Suite 300

BRING YOUR LUNCH!

There is no parking on site and parking is limited in the area.
Taxis and public transport are advised.

Cannot make the seminar physically, but would like to attend?

Please join the webinar here: <https://zoom.us/j/431852176>.

(Note: Students from FMED 504 are expected to attend)
