Family Medicine Research Seminar

Caring Community:
An Innovative Model of Patient and Citizen Partnership in Primary Care

February 27th, 2020 15:00-16:00

Antoine Boivin, MD PhD & **Ghislaine Rouly**, Patient Partner

Social challenges are often unaddressed in medical care, although their impact on health is significant. Experienced patients and engaged citizens are experts in navigating across the healthcare system and their community, but their role is rarely recognized nor integrated within primary care. Caring Community bridges medical and community care by partnering with experienced patients and engaged citizens working in collaboration with primary care professionals to care for people with complex medical and social needs. This presentation will position the Caring Community model in relation with similar primary care initiatives (eg. peer-support, community navigator, social prescribing), and provide some key learning from testing the model in Montreal over a 3-year period.

The seminar will take place at the Department of Family Medicine at 5858, Côte-des-Neiges Rd, 3rd floor, classrooms 4 & 5
*There is no parking on site and parking is limited in the area. Taxis and public transport are advised.

Cannot be present in person but would like to attend? Join via webinar here
