

Pain Service Rotation Elective

The Montreal General Hospital has a well established interdisciplinary pain clinic and consult service where the resident may do an elective to:

1. To increase knowledge and skills regarding cancer pain syndromes, their diagnosis and management.
2. To increase knowledge and skills related to the use of interventions targeted at refractory cancer pain.
3. To increase knowledge and skills regarding chronic non-cancer pain syndromes, their diagnosis and management.

The resident will participate with the provision of care as a member of the pain consultation service, in the cancer pain clinics, the chronic pain clinics, and get the opportunity to witness various interventions such as vertebroplasties, intrathecal, and nerve blocks.
