

MCGILL FAMILY MEDICINE RESEARCH SEMINARS

“PARTICIPATORY RESEARCH IN ADAPTIVE MANAGEMENT OF PRIMARY HEALTH CARE”

CIET - PRAM

Community Information and Epidemiological Technologies (CIET) is a group of non-profit foundations, charities, non-governmental organizations and institutes dedicated to building the community voice into planning. Professor Neil Andersson started CIET, Centro de Investigación de Enfermedades Tropicales (Tropical Disease Research Centre), in Mexico in 1985 to promote wider participation in health planning. In Canada, the name became "Community Information and Epidemiological Technologies," reflecting the broader application of epidemiological methods to research areas beyond the health field.

Participatory Research at McGill (PRAM) is researchers working in partnerships with those affected by issues being studied, or those who must use the results, for the purpose of creating and translating knowledge for action or change in health practice or policy, or individual, community or population health.

Thursday September 22, 2016
From 12:30-2:00 p.m.
Department of Family Medicine
5858 ch. de la Côte-des-Neiges, 3rd floor, suite 300
