1. INTRODUCTION

We are about 1/6 of the way into the 21st Century. All of you were born before smartphones or Snapchat existed. Many of you could well be here to see the dawn of the 22nd Century. What will the world look like then? This question is encapsulated in some bumper-sticker wisdom: “I am my ancestors’ wildest dream.” Are we? Will our descendants say that?

This course is about one set of factors that will determine the answer: “world environmental problems.” These are essentially challenges that will dramatically affect the ecology of our species and will influence how the planet changes through your lifetime; how you leave it for your descendants. These problems—or challenges—are closely linked to what we loosely call “sustainable development” (SD). That is the process that will, if successful, lead us to a world in which we can live happily as we move deeper into this century. The alternative is not pretty! Literally, SD is taken to mean “development that meets the needs of the present without compromising the ability of future generations to meet their own needs” (Brundtland, 1987). There is much to question and to challenge in this definition, and in much of the research, policy development, and action that has taken place since 1987, but, nonetheless, the concept represents a turning point in the story of human development, that is, in the natural history of our unique, intriguing, astonishing and powerful species.

The concept of SD signaled the recognition of vulnerability to the impacts of what we have called “progress”. Progress is in quotes, because that too is an uncertain concept that bears exploration: what are we progressing from? What are we progressing towards? How do we measure advance or retreat? While most agree on the generalities (less violence, ignorance, poverty, disease and affliction; more peace, enlightenment, prosperity, health and well-being), there are some nuances with important implications (e.g.—to name a few—the costs of mechanization and reliance on fossil fuels; the vulnerability of interconnectedness and dependence on complex, managed systems; the consequences of globalization and the pressures on cultural identity, autonomy and local self-sufficiency; the emergence of the “Western Diet” with its implications for personal and ecosystem health; or even the concerns about social isolation in a wired world), and some paradoxes that must be addressed (e.g. how does prosperity link to increased consumption and growing inequality; how can social justice and ecological footprints be reconciled?)

Basically, the challenge of sustainable development is to avoid catastrophe, on our otherwise happy journey into a future...a future that we will create by our actions and decisions! This course is intended to help us take bearings in this journey, and perhaps allow you to help shape the direction we choose.

The premise is that, no matter what role you choose to play in the evolving future, or no matter what role you are able to play, you will have some influence on how—or whether—we navigate around the challenges we face. Will your descendants be your wildest dream? More on that later.

2. THE LEARNING OBJECTIVES. By the end of the course, if we succeed, you should:

- be familiar with the array of ecological problems that we face, and understand the scale of their importance to us;
- be aware of what the range of possible responses to the problems are, noting limits of knowledge, capacity, and will (e.g. what we understand about possible solutions, what we have the skills or resources to do, and what we are prepared to attempt);
- understand how the problems are interconnected or entangled with one another and with other important dimensions of human ecology and global ecology, and, lastly;
- recognize what can be done in your discipline or in others to address some aspects of these problems.
3. COURSE ACTIVITIES and GRADING

The course activities will include:

- **Lectures**: The text (see below) is subtitled “The Science behind the Stories”. Lectures will explore “the stories” and the ways that we approach understanding the stories, determining actions, and measuring success. This is a survey course, so lectures are about ideas supported by evidence, and will present case studies that illustrate the embedded context of the selected environmental problem. Whole courses are given on (and whole careers are based on) research and methods related to any one of the topics we cover, so once the ideas and the context are established, you may well wish to take advanced courses. Some lectures will be presented by guest speakers who will talk about their area of specialization.

- **Readings**: The readings are intended to provide you with a preliminary “state of knowledge” review regarding the science we use to explore the ecological challenges we will be discussing. The textbook is a worthwhile reference book that you can keep and refer to long after you graduate. Its approach to both Science and Stories is significant. The on-line PDFs on the Sustainable Development Goals will familiarize you with one framework that is intended to help shape the global agenda for addressing the challenges.

- **Group research projects**: you will work in small groups on specific research topics, and you will present both written and oral summaries of your findings. For your assigned topic, you will address each of the learning objectives as outlined above.

- **Evaluation activities**: quizzes and presentations that take place during class time.

**Evaluation and Grading**

- Two in-class quizzes that will assess your knowledge of the readings and the lecture material (2 x 30%) ……………………………………………………….. 60%
- One written report on your group project ………………………………………… 20%
- One oral presentation on your group project ……………………………………… 10%
- One individual written commentary on the full array of oral presentations. 10%

4. READING and STRUCTURE

There are three items from which required readings will be drawn.

Lectures and text readings are intended to complement, not duplicate, one another. You are responsible for both. The tests will draw on lectures and material from the book, including material not covered in class. Material from the lectures, not covered by the book, will also be examinable (so coming to class is a good idea). Additional readings may be assigned as needed for special topics.
5. INSTRUCTORS, OFFICE HOURS and CONTACTS.

The instructor for the course is Thomas Meredith.

There are also five TAs who will be actively involved in your group assignment.

Joanna Jordan,
Fanny Boudet,
Andreane Bellon de Chassy,
Frances Amyot,
Noelani Eidse

For practical reasons, email communication for the course will be limited. Office hours and contacts TBA

6. THE FINE PRINT

1. "McGill University values academic integrity. Therefore, all students must understand the meaning and consequences of cheating, plagiarism and other academic offences under the Code of Student Conduct and Disciplinary Procedures (see www.mcgill.ca/students/srr/honest/ for more information). (approved by Senate on 29 January 2003)
   "L'université McGill attache une haute importance à l'honnêteté académique. Il incombe par conséquent à tous les étudiants de comprendre ce que l'on entend par tricherie, plagiat et autres infractions académiques, ainsi que les conséquences que peuvent avoir de telles actions, selon le Code de conduite de l'étudiant et des procédures disciplinaires (pour de plus amples renseignements, veuillez consulter le site www.mcgill.ca/students/srr/honest/)."

2. "In accord with McGill University's Charter of Students' Rights, students in this course have the right to submit in English or in French any written work that is to be graded." (approved by Senate on 21 January 2009 - see also the section in this document on Assignments and evaluation.)
   "Conformément à la Charte des droits de l'étudiant de l'Université McGill, chaque étudiant a le droit de soumettre en français ou en anglais tout travail écrit devant être noté (sauf dans le cas des cours dont l'un des objets est la maîtrise d'une langue)."

3. Text-matching Software: In light of the policy on integrity, we reserve the right to use text-matching software for written assignments in this course, or, if plagiarism is suspected, to provide the student with the right to choose an alternative way of attesting to the authenticity of their work.

4. For information on university and department policies for student assessment, please go to http://www.mcgill.ca/geography/studentassessment.

5. Instructor generated course materials (e.g., handouts, notes, summaries, exam questions, etc.) are protected by law and may not be copied or distributed in any form or in any medium without explicit permission of the instructor. Note that infringements of copyright can be subject to follow up by the University under the Code of Student Conduct and Disciplinary Procedures.

6. "As the instructor of this course I endeavor to provide an inclusive learning environment. However, if you experience barriers to learning in this course, do not hesitate to discuss them with me and the Office for Students with Disabilities, 514-398-6009."

7. Guidelines for the use of mobile computing and communications (MC2) devices in classes at McGill have been approved by the APC.

8. "End-of-course evaluations are one of the ways that McGill works towards maintaining and improving the quality of courses and the student’s learning experience. You will be notified by e-mail when the evaluations are available on Mercury, the online course evaluation system. Please note that a minimum number of responses must be received for results to be available to students."

9. "McGill has policies on sustainability, paper use and other initiatives to promote a culture of sustainability at McGill. (See the Office of Sustainability.)"

10. In keeping with McGill's preparedness planning strategies with respect to potential pandemic or other concerns: "In the event of extraordinary circumstances beyond the University’s control, the content and/or evaluation scheme in this course is subject to change."

11. "Additional policies governing academic issues which affect students can be found in the McGill Charter of Students' Rights"
