

For the third year, hundreds of people interested in ending infectious disease epidemics gathered in Montreal for the McGill Summer Institute in Infectious Diseases and Global Health. Hosted by the internationally-known research groups on TB, HIV, and neglected tropical diseases of McGill and the McGill University Health Centre, participants were part of courses that challenged them with new knowledge and provided opportunities to meet leaders in the field and fellow global health professionals.

— We thank all our funders, sponsors and partners for making the Summer Institute a big success! —

2017 COURSES

- TB Research Methods
- Global Health Diagnostics
- Advanced TB Diagnostics
- Introduction to Genomic Epidemiology of Infectious Diseases
- Qualitative Methods of Global Infectious Diseases

AT A GLANCE

- **374** participants
- **53** countries
- **5** courses
- **1** out of every **3** attendees from a LMIC country

“I immensely benefited from the knowledge and connection with colleagues from across the globe. I look forward to using the knowledge to end TB in my country.”

- 2017 Summer Institute participant
