

# IHSP

## POLICY TALKS

### Webinar Series

December 1st

12:30-1:30 EDT

## Citizen Engagement in Artificial Intelligence Ethics: Enabling People's Input in Population Health Policy-Making

Jean-Christophe Bélisle-Pipon, PhD

Visiting Researcher, The Petrie-Flom Center for Health Law Policy, Biotechnology, and Bioethics, Harvard Law School

It has quickly become a truism that the ethics of artificial intelligence (AI) is necessary and must help guide technological developments. In recent years, an impressive number of statements of principles, normative guidelines and ethical commitments have emerged from academia, industry, government and civil society. While providing a basis for discussion and exchange on the appropriate regulation and policy-making for this new technology, it is not always clear how these ethical guidelines were developed, and whether citizens were involved in their enunciation. In this webinar, I will review the state of citizen and stakeholder engagement in AI ethics and propose a way to enable and capture citizen perspectives to inform policy-making in population health.
