

McGill Integrated Program in Neuroscience Presents:

Post-Synaptic Careers: Life after a Neuroscience Degree

Discussion Series

What can one do after a degree in Neuroscience?

This discussion series will address this question through informal conversations with some successful non-academics with graduate degrees in neuroscience; the series will compliment IPN's Pathways and Connections, which is the academic equivalent of Post-Synaptic Careers. This is your chance to talk to those who were once where you are. Ask the guest speakers about the often difficult decision to leave academia and the important, but sometimes serendipitous, connections that led them to where they are now.

Stephanie Laroche-Pierre, Project Manager at Montreal International

Stephanie is currently a Project Manager at Montreal International. Long before that, however, she did an MSc. at McGill in the Graduate Program in Neurological Science (IPN's predecessor). During her graduate research, she identified the essential domains for the neuroprotective function of the Prion protein (PrP). After graduating in 2008, Stephanie became a consultant for Montreal International, a company that promotes Greater Montreal on the world stage, increasing the city's international business ties. In January 2010, Stephanie became a project manager, and now works "with the Director of Business Development to attract foreign companies to Metro Montreal and promote the growth of their local subsidiaries."

DeGrandpre Amphitheatre, MNI (3801 Rue University), starting at 6:00 pm on Thursday, June 20th, 2013.

**Please RSVP to Joe Makkerh
