

**NATIONAL TOPOGRAPHIC
DATA BASE**

DATA DICTIONARY

NTDB DATA DICTIONARY

The data dictionary of the National Topographic Data Base (NTDB) contains all of the entities that may appear in the NTDB, together with their relations and other pertinent information. The dictionary comprises two parts: one containing entity descriptions; the other is an appendix containing various tables.

ENTITY DESCRIPTIONS

The first part of the dictionary presents the entities in alphabetical order. Each entry includes the entity name in both official languages, the theme the entity belongs to, the entity definition, entity attributes and their authorized values, the authorized combinations of attribute values and their corresponding code, the authorized geometric representation qualifiers, guaranteed sizes, the type of spatial representation (two or three dimensions), the altimetric exclusion area icon, relations, a figure and additional notes.

In detail, for each entity, the following items are found:

ENTITY NAME

The entity name corresponds to the topographic feature about which information is required. It is provided in both official languages.

THEME

The group with which the entity is associated.

DEFINITION

The definition describes the entity as it pertains to the NTDB.

FIXED ATTRIBUTES

This section presents attributes that have a limited domain of authorized values. If an entity does not have any fixed domain attributes, the value "None" is present. The following are given in order for each attribute:

- its name;
- its domain of values;
 - number identifying the attribute value;
 - attribute value;
 - definition associated with the attribute value.

Example:

Entity: DAM
Attribute: DAM TYPE
Domain:

<u>Number</u>	<u>Value</u>	<u>Definition</u>
(0)	Generic/Unknown:	
(1)	Other:	All other than "sluice gate".
(2)	Sluice gate:	A device for regulating water through a sluice or irrigation canal.

Certain attributes may be given the values "Generic/Unknown" or "Other".

- Generic/unknown: Value indicating that an attribute value for this entity is not applicable or that it is impossible to determine the value that should be assigned to the attribute.
- Other: Value indicating that an attribute value is other or different than that or those listed. In the preceding example, the value "Other" for the attribute "Dam Type" indicates that the dam is neither a "sluice gate" nor "generic/unknown".

VARIABLE ATTRIBUTES

This section presents the attributes that have a variable domain of attributes. The following are given in order for each attribute:

- its name;
- its definition.

Attribute Values

The alphanumeric attribute (C) is left blank if its value is unknown. The integer attribute (E) takes the value "-1" if its value is unknown.

AUTHORIZED GEOMETRIC REPRESENTATION QUALIFIERS

This section presents the authorized values that the geometric representation qualifier may have. The domains of values for point and line entities are:

- Point: (1) position definite;
(2) position approximate;
- Line: (1) position definite;
(2) position approximate;
(3) position virtual/continuity;
(4) position virtual/discontinuity.

AUTHORIZED COMBINATIONS OF ATTRIBUTE VALUES

This section presents the authorized combinations of values for attributes that have a fixed domain. The value "Generic/Unknown" is given in all cases; the same code is used when an entity has no fixed domain attributed or when none of the fixed attributes of the entity is known. When an entity:

- has a single attribute, the list of authorized values for the attribute is given;
- has two or more attributes, the authorized combinations of values for the attributes are given.

The authorized geometric representations for the 1:50 000 and 1:250 000 scales and their corresponding codes are provided for each combination of attribute values.

Example: Built-up Area

Authorized Combinations of Attribute Values	NTDB Code	1:50 000			1:250 000		
							
generic/unknown	184	184		4280	184		4280
other	185			4281			
mobile home park	186			4282			

-  Symbol used for oriented point entity. The orientation must have a value within the range "1 to 359 degrees (["1-359]); the value ""1" indicates that the orientation is unknown;
-  Symbol used for point geometric representation;
-  Symbol used for line geometric representation;
-  Symbol used for area geometric representation.

Three combinations of attributes are authorized in the example above. The value "generic/unknown" is authorized at both scales. The codes 184 and 4280 are associated with the geometric representations "point" and "area" respectively. The values "other" and "mobile home park" are authorized solely at the 1:50 000 scale and bear the codes 4281 and 4282, respectively for the geometric representation "area". The codes shown under the icons , , ,  are for the exclusive use of the Centre for Topographic Information¹. The distributed data bear the codes in the column entitled "NTDB Code".

¹ The linear code is obtained by adding 2048 to the NTDB code; the surficial code is obtained by adding 4096 to the NTDB code.

GUARANTEED SIZE

This section presents the guaranteed sizes for each entity occurrence depending on whether it is geometrically represented as a point, line, or area. These sizes, expressed in planimetric metres, are presented in the following manner:

1:50 000				1:250 000			
	●	~			●	~	
Range >	0				0		
Width >			15				75
Length >		100	100			500	500

To illustrate, the table shows that the entity is represented at the 1:50 000 scale by:

- an area, if it is at least 100 m in length and at least 15 m in width;
- a line, if it is at least 100 m in length and less than 15 m in width;
- a point in all other circumstances.

The value in the "Range" row indicates the length of the side of a square corresponding to the superficies for entity representation. For an entity to be included in the NTDB, however, its width must be equal to half the value indicated in the row "Range", as long as the minimum superficies corresponding to that range is satisfied, as illustrated in the table opposite.

Range (m)	100	250
Minimum Superficies (m ²)	10 000	62 500
Minimum Width (m)	50	125

A complex area will necessarily contain one or more exclusions. In such complex areas, the guaranteed size applying to an exclusion is equal to the "range" of the entity. For example, at the 1:50 000 scale, a "non-built" zone within a built-up area is governed by the minimum range of the built-up area, which is 300 m. This rule prevails unless otherwise specified in the "Notes" and/or "Diagram" section of the Data Dictionary.

PRESENCE OF ALTIMETRIC COORDINATES

2D ☒ 3D ☒

Entities may, under some circumstances, support an elevation (h); in such cases, the 3D box will be checked off. When only the 2D box is checked off, the entity cannot support an elevation. When only the 3D box is checked off, the entity must be described in three dimensions (x,y,h); this is the case with the entities "contour" and "elevation point". When both boxes are checked off, the entity can be described in two (x,y) or three dimensions (x,y,h).

ALTIMETRIC EXCLUSION AREA

This icon identifies the entity as being an altimetric exclusion area, as defined in section 6.9 of *NTDB Standards and Specifications*, third edition, version 1.

RELATIONS

This section briefly presents the connection and sharing relations between an entity and other entities or different occurrences of a same entity. An icon identifying the geometric representation of the entity (●, ●, ~, ||) appears in the upper left-hand corner of each subsection. Each subsection contains a list of relations that the entity can have with other entities of the same theme (intra-theme) or different themes (inter-theme). Each row contains the entity's name, its geometric representation (P : point; L : line; or A : area), the relation, the name of the related entity, and its geometry.

Relations between entities may be required, possible, or illegal. In addition, some entities require certain combinations of attributes in order to support relations. The appendix provides the details pertaining to relations between entities and the kinds of relation (required, possible, illegal).

FIGURE

The figure illustrates how the entity is modelled among other frequently encountered related entities. Some examples showing existing relations with other entities are also presented. Superimposed and/or adjacent areas may be shown when applicable. Figures are presented in planimetric (top) view. Figures are optional and are presented only to help readers understand the application of relations between entities.

NOTES

This section provides any peculiarity or additional information pertaining to the entity.

Note: The date at the bottom of the page indicates the most recent date on which the entity has been included or modified in the dictionary.

APPENDIX

The second part of the dictionary presents a detailed description of the relations between entities. It includes:

- table of entities, combinations of attribute values, NTDB codes and themes;
- table listing the relations and cardinalities of connection between the combinations of attribute values;
- table listing the relations and cardinalities of sharing between the combinations of attribute values;
- table listing the relations and cardinality of adjacency and superimposition between the combinations of attribute values;
- table listing the minimum sizes allowed and the orientation relations for the combinations of attribute values;
- bilingual entity list and combinations of attribute values;
- table of correspondences between the NTDB codes in editions 2 and 3 of the NTDB;
- table of differences between data set conforming to *NTDB Standards and Specifications* 3.0 and 3.1;
- types of administrative jurisdiction grouped by class.

Key:

Geometric Representation of Entities

Point

Primary point entity.

Primary oriented point entity.

Line

Primary line entity.

or

Secondary line entity.

Representation reserved for secondary linear entities in proximity to a primary surficial entity.

Area

Primary surficial entity.

Secondary surficial entity.

Representation reserved for waterbodies.

Representation reserved for primary surficial entities superimposed on waterbodies.

Representation reserved for secondary surficial entities superimposed on waterbodies.

Key (cont.):

Relations between Entities

	Representation showing a relation of connection between two entities of the same theme.
	Representation showing a relation of connection between two entities of different themes.
	Representation showing a relation of sharing.
	Unconnected point entity.
	Point entity connected to a secondary linear entity of the same theme.
	Point entity connected to a secondary linear entity of a different theme.
	Secondary linear entity connected to a primary surficial entity of the same theme.
	Secondary linear entity connected to a primary surficial entity of a different theme.
	Primary linear entity connected to a secondary surficial entity of the same theme.
	Primary linear entity connected to a secondary surficial entity of a different theme.
	Primary linear entity sharing a line with a secondary linear entity of the same theme.
	Primary linear entity sharing a line with a secondary linear entity of a different theme.
	Secondary linear entity sharing a line with a primary surficial entity of the same theme.
	Secondary linear entity sharing a line with a primary surficial entity of a different theme.
	Secondary surficial entity sharing a line with a primary surficial entity of the same theme.
	Secondary surficial entity sharing a line with a primary surficial entity of a different theme.

3D

Building

Bâtiment

FIXED ATTRIBUTES

Building Function:

(0) Generic/Unknown

(1) Arena: An enclosed, large surface used for sporting activities.

(2) Armoury: A building used by the militia.

(3) Barn/machinery shed: A large utility building on a farm complex.

(4) Cabin: A building in a remote or wilderness area.

(5) City hall: A building where the principal offices of a city administration are located.

(6) Coast guard station: A building housing the Coast Guard administrative offices.

(7) Community centre: A public building in which community gatherings and/or sporting activities are held.

(8) Courthouse: A public building housing the judicial courts.

(9) Customs post: A structure near or at an international boundary where travellers and vehicles crossing the border are inspected.

(10) Dome: A structure with a roof formed by grouped, rounded arches rising from a round base, normally used for storing salt or sand for road maintenance.

(11) Electric power station: A building where electricity is generated.

(12) Fire station: A building housing fire-fighting equipment.

(13) Fish hatchery: Where fish are hatched under controlled conditions.

(14) Grain elevator: A building used for the storage of grain, usually located along a railway.

(15) Hall: A building used for assembly.

(16) Highway service centre: A building beside and directly accessible from the highway, providing automotive services and restaurant facilities.

(17) Hospital: An institution where sick or injured people receive medical care

(18) Kiln (tobacco): A permanent, heated enclosure used for drying tobacco.

(19) Medical centre: Replaces a full service hospital in satellite communities or other areas without hospital services.

(20) Municipal hall: Where the main offices of a municipal administration are located.

(21) Museum: A public building set aside for the exhibition of natural, historic, artistic, or scientific objects.

(22) Observatory: A building equipped for astronomical observations

(23) Gas and oil facilities building: A building or structure dedicated to in the production or distribution of chemical products represented by the entity "Gas and oil Facilities" if its area is less than 30 m.

(24) Other: A residential, public, or commercial building with a function other than those listed herein. If the "Other" building is not residential, public, or commercial, its size must be greater than 10m X 10m. In the case of farm complexes, such a building other than "Barn/machinery shed" must be greater than 30m.

(25) Parliament building: A building in which the elected or appointed members of provincial or federal governments meet and enact laws.

2D

3D

Building

Bâtiment

FIXED ATTRIBUTES (continued)

Building Function:

(26) Police station: The main offices of a local or regional police force, including the RCMP.

(27) Railway station: A building along a railway where the train stops to load and unload passengers or freight.

(28) Sanatorium: A building used for the care and rehabilitation of people with mental or physical disorders.

(29) Satellite-tracking station: A building containing receiving devices to record information from satellites.

(30) Senior citizens home: A residence where cares are provided to the elderly.

(31) Shopping centre: A building that contains a large number of individual retail outlets. Represented by "Building (Other)" if its area is less than 30 m.

(32) Sportsplex: A building providing facilities for various sporting and recreational activities.

(33) Trading post: A building, in a remote area, where goods are purchased or exchanged.

(34) Warden/Ranger station: A building housing national/provincial park or forestry administrative offices.

(35) Weigh scale (highway): A complex along a highway for weighing commercial vehicles.

(36) Greenhouse: A building covered with a transparent material in which plants are grown.

(37) Industrial building: A building for manufacturing products, processing or preserving raw materials, or producing energy outlets. Represented by "Building (Other)" if its area is less than 30 m.

Industrial building replaces the following attributes values: steel mill, shipyard, cement plant, factory, sawmill, lumber mill, plant, automobile plant, chemical plant, water treatment plant, filtration plant, sewage treatment plant, pulp/paper mill, fish processing plant, petroleum refinery.

(38) Religious building: A building serving as a place of worship or residence for a Christian or non-Christian religious order. Religious building replaces the following attributes values: convent, church, non-Christian place of worship, monastery.

(39) Penal building: A facility for confining or rehabilitating of persons convicted of breaking the law. Penal facilities replaces the following attributes: correctional institute, reformatory, penitentiary.

(40) Lodging facilities: A building where restaurant services and sleeping accommodations are provided on a rental basis. Lodging facilities replaces the following attributes: hostel, hotel, motel.

(41) Educational building: An institution for elementary, secondary, or post-secondary education. Educational building replaces the following attributes: college, school, seminary, university.

Hazard to air navigation

Obstacle à la navigation aérienne

FIXED ATTRIBUTES

Type of Hazard to Air Navigation:

(0) Generic/Unknown

(1) Parabolic antenna: A dish-like structure, sometimes enclosed in a dome; required if its height ≥ 30 m.

(2) Chimney: An upright flue through which combustion gases and smoke are discharged into the air; required if its height ≥ 30 m.

(3) Tank: A cylindrical receptacle used for storage; required if its height ≥ 30 m.

(4) Cross: A structure in the shape of a cross used as a decoration and erected in honour of a historical event.; required if its height ≥ 30 m.

(5) Wind-operated device: A structure used to develop power from the wind; required if its height ≥ 30 m.

(6) Crane: A mechanical device used to lift and move heavy objects from one place to another; required if its height ≥ 30 m.

(7) Water disturbance: A site at which the natural flow of surface water is disturbed or impeded due to a change in slope; required if its height ≥ 3 m.

(8) Bridge: A structure erected along a travelled route to span a depression or obstacle and to ensure the continuity of the road and railway network; required if its height ≥ 60 m.

(9) Navigational aid: A structure for guiding marine navigators; required if its height ≥ 30 m.

(10) Tower: A structure built to provide clearance above the surrounding objects or features; required if its height ≥ 30 m.

(11) Aerial cableway: A transportation device for freight or passengers consisting of a carrier and a cable supported by towers; the height of aerial cableways is always "unknown."

VARIABLE ATTRIBUTES

Height of the hazard

Height of the hazard (metres).

Hazard to navigation

Entrave à la navigation

FIXED ATTRIBUTES

Hazard to navigation Type:

(0) Generic/Unknown

(1) Rock in water: A rock or earthen formation always visible above the water surface.

(2) Exposed shipwreck: The remains of a grounded ship that is partially above the water surface.

(3) Obstacle in water: A navigation hazard, such as an abandoned bridge pier (a structure in the water that was formerly used to support a bridge) or a crib (a crate-like structure of logs or beams, filled with stones, that is used as an offshore anchorage).

Limited-use road

Route d'accès limité

FIXED ATTRIBUTES

Limited-use Road Classification:

(0) Generic/Unknown

(1) Winter: A road that is useable only in the winter because it passes over lakes and wetlands.

(2) Cart track: A road receiving minimal maintenance that is only suitable for all-terrain vehicles.

(3) Dry weather: A road with a surface that is suitable for traffic other than offhighway vehicles only in dry weather.

Liquids depot/dump

Dépôt de liquide

FIXED ATTRIBUTES

Type of Liquid:

(0) Unknown : Impossible to determine the type of liquid from the data source.

(1) Water: Undrinkable water.

(2) Drinking water: Water for human consumption.

(3) Liquid waste: Liquid waste from an industrial complex.

Pond Type:

(0) Unknown: Impossible to determine the type of pond from the data source.

(1) Other: Other than a filtration pond, settling pond, or sewage disposal pond.

(2) Filtration pond: A pond or system of ponds used to filter water for domestic use or for reuse in an industrial facility.

(3) Sedimentation pond: A manmade pond or system of ponds used to separate settleable solids from liquid.

(4) Sewage disposal pond: A pond or system of ponds used to dispose of wastewater.

(5) Swimming pool: A large outdoor container used by the public for swimming.

Mining area

Zone d'extraction de minerai

FIXED ATTRIBUTES

Mining Area Nature:

(0) Unknown: Impossible to determine the mining area nature from the data source.

(1) Pit: An excavation from which gravel, sand, or clay are removed.

(2) Quarry: An excavation created by the removal of stone by blasting or cutting.

(3) Mine: An excavation or tunnel in the earth from which mineral substances are extracted.

Mining Area Type:

(0) Unknown: Impossible to identify the type of mining area from the data source.

(1) Open pit: The mined area is exposed to the surface of the earth.

(2) Underground: Under the surface of the earth.

Mining Area Status:

(0) Unknown: Impossible to define the mining area status from the data source.

(1) Operational: Can be used or is in full operation.

(2) Abandoned: Deserted or not maintained.

Permanent snow and ice

Neige et glace permanentes

FIXED ATTRIBUTES

Permanent Snow and Ice Type:

(0) Generic/Unknown

(1) Debris-covered ice: The portion of a glacier covered by earth and possibly low vegetation that delays the melting of the underlying ice.

(2) Other: This includes glaciers (a mass of permanent snow and ice flowing from an area), ice caps (a dome-shaped mass of permanent ice and snow with divergent flow), and icefields (an irregular-shaped mass of permanent snow and ice, generally forming an accumulation area for two or more glaciers, also referred to as snowfields).

Railway

Chemin de fer

FIXED ATTRIBUTES

Railway gauge:

(0) Unknown: Impossible to determine the gauge of the railway from the data source.

(1) Narrow: A railway in which the rails are 0.967 m apart.

(2) Special: A railway-like feature, such as a subway or miniature railway.

(3) Standard: A railway in which the rails are 1.435 m apart.

Railway relationship to the ground:

(0) Unknown: Impossible to determine the relationship to the ground of the railway from the data source.

(1) Ground level: A railway built directly on the ground.

(2) Other: A railway built on a structure such as a bridge, dam, or tunnel.

Railway Status:

(0) Unknown: Impossible to determine the status of the railway from the data source.

(1) Abandoned: A railway more than 500 m in length no longer suitable for rail traffic. A minimum of repair could restore the railway to limited service.

(2) Operational: In use or full operation.

(3) Under construction: Being built when the surveyed in the field.

Railway Type:

(0) Unknown: Impossible to determine the type of railway from the data source.

(1) Multiple: More than one set of rails on the same roadbed.

(2) Side track: A track connected to the main track such as a siding, passing track, spur, or wye.

(3) Single: Only one set of rails on the roadbed.

Road Route

FIXED ATTRIBUTES

Road Classification:

(0) Unknown: Impossible to determine the classification of the road from the data source.

(1) Highway: A road for motor vehicles designed for high-speed travel, usually lacking rail or road intersections. Each roadway of a highway is an entity occurrence.

(2) Main: A numbered thoroughfare.

(3) Secondary : A local or rural road not assigned a number.

(4) Street: A public road in a residential or commercial area with buildings on one or both sides.

(5) Rapid transit: A road restricted to vehicles of the public transportation system.

Road Support:

(0) Unknown: Impossible to determine road support from the data source.

(1) Ground level: A road built directly on ground level.

(2) Other: A road built on a bridge, on a dam, or in a tunnel.

Road Surface:

(0) Unknown: Impossible to determine the road surface from the data source.

(1) Hard surface: A surface made of concrete, asphalt, or tar gravel.

(2) Loose surface: A surface other than concrete, asphalt, or tar gravel.

Road Status:

(0) Unknown: Impossible to determine the road status from the data source.

(1) Operational: Any useable road.

(2) Under construction: A road in the preliminary stages of construction, which would include activities such as grading and/or building embankments for a bridge, and on which traffic is prohibited for an extended period of time.

Runway

Piste d'envol

FIXED ATTRIBUTES

Runway Category :

(0) Unknown: Impossible to determine the type of runway from the data source.

(1) Airfield: A land aerodrome with limited services.

(2) Airport: A land aerodrome licensed by Transport Canada with lighted, paved or loose-surface runways for airplanes, an operating control tower, and services for aircraft and passengers.

(3) Heliport: A land aerodrome for helicopters listed in the Canada Flight Supplement.

Runway Status:

(0) Unknown: Impossible to determine the status of the runway from the data source.

(1) Abandoned: No longer maintained for aviation purposes and listed as such in the Canada Flight Supplement.

(2) Operational: Being used or in operation.

Runway Surface:

(0) Unknown: Impossible to determine the surface of the runway from the data source.

(1) Hard surface: A surface made of concrete, asphalt, or tar gravel.

(2) Loose surface: A surface other than concrete, asphalt, or tar gravel.
