Message from Dr. Don Sheppard, Chair of MIMM
The COVID-19 pandemic has brought major changes to our lives in MIMM. Research operations (with the exception of COVID-19 research) have come to a standstill, we are all learning the ins and outs of zoom and e-learning, and there is a great deal of uncertainty about the duration of this crisis and its impact on our personal and professional lives. We have tried to keep you as informed as possible these last two weeks without deluging you with too many communications. This next week will present new challenges as we move to remote learning for our undergraduate and graduate students.

Message from Dr. Samantha Gruenheid, Associate Chair of MIMM
It's been a crazy couple of weeks for everyone. But as we have been physically distancing, we have also been "virtually" pulling together. It has been inspiring to see our professors working tirelessly to prepare for remote course delivery and adapting to information as it evolves daily. Our graduate students have been mastering remote seminars, committee meetings, comprehensive exams and defenses while winding down their benchwork for the time being. This week, we welcome back our undergraduate students as they settle into remote learning. As many of us stretch...
curriculum and live graduate student seminars by Zoom for the first time. I want to take this opportunity to thank everyone for their hard work, and positive energy during these last two weeks, and in particular, I would like to highlight the efforts of Dr. Gruenheid who has worked tirelessly with the course coordinators and lecturers to help migrate their courses and assessments to the new formats. I will close by asking for your continued support as we deal with these new challenges going forward, and encourage you to reach out to us if you have questions, concerns or suggestions about these changes.

MIMM ALUMNI HAS ISOLATED THE COVID-19 VIRUS

Dr. Robert Kozak, isolated SARS-CoV2 with a team of researchers. He completed his BSc, MSc and PhD at MIMM and worked in Dr. Marcel Behr's lab.

"Researchers from these world-class institutions came together in a grassroots way to successfully isolate the virus in just a few short weeks," said Dr. Rob Kozak, clinical microbiologist at Sunnybrook. “It demonstrates the amazing things that can happen when we collaborate.”

McGill24

Last month, during McGill24 on March 11th, the Tiny Earth initiative received a total of $3,549.88 - thank you for your donations. The goal is to raise a total of $7,000 and we have 7 weeks left to reach it! If you haven't yet made a gift, it's not too late: click here to make a contribution to provide a hands-on research opportunity to an undergraduate student to discover novel antimicrobials and fight COVID-19
