

## Postdoctoral fellowship position in host-pathogen interactions

The Nguyen lab is looking for a highly motivated postdoctoral fellow to work in a multidisciplinary research program investigating **host-pathogen interactions in *Pseudomonas aeruginosa* infections**. The project will involve microbiology, cell biology and genetic/genomic approaches to study various aspects of host-pathogen interactions important to chronic *Pseudomonas aeruginosa* infection and lung inflammation in the context of cystic fibrosis lung disease.

The position requires a PhD in microbiology, immunology, cell biology or related discipline, with a strong background in cell biology, microbiology and/or immunology, and familiarity with methods such as bacterial and mammalian cell cultures, flow cytometry and fluorescence microscopy. Experience in genomics, transcriptomics or other bioinformatic tools is an asset. The candidate will be expected to have demonstrated scientific independence and critical thinking, and to have a strong academic and publication record.

This position will provide numerous opportunities for local and international collaborations, as well as a rich training environment within the Translational Research in Respiratory Diseases program and the Department of Microbiology and Immunology. McGill University and the Research Institute of the McGill University Health Centre are world-renowned and one of Canada's top biomedical and hospital research centres. Montreal is a beautiful, multi-cultural and vibrant city with an unequalled quality of life.

The position is available immediately. Interested candidates should send a letter of interest, CV and contact information of two references to:

Dr. Dao Nguyen, MD, MSc, FRCPC.  
Associate Professor, Department of Medicine, McGill University
