

# The latest in wireless technology is all in your head.

With more than 100 billion neurons that make trillions of electrical connections, the brain boasts the most complex wiring in the universe. In fact, exploring the mind-boggling potential of our grey matter is what the Montreal Neurological Institute (MNI) is all about.

We're one of the world's leading neuroscience research centres and our breakthroughs are dramatically improving lives for young and old. Whether it's mastering stroke treatment or tackling multiple sclerosis and Parkinson's disease, the MNI is putting its brainpower to work for you.

For more on what's on our minds at MNI, go to [www.mni.mcgill.ca](http://www.mni.mcgill.ca)
