

Introduction

Dear Applicant,

The Department of Pediatrics at McGill University offers advanced pediatric training for senior pediatric trainees who choose to develop a career in Social Pediatrics.

This 12 month fellowship is intended for candidates wishing to develop the medical expertise and skills to engage, collaborate and help empower socially vulnerable populations, and to act as champions of positive change for the health of these populations.

The educational experiences include clinical training, medical education, advocacy, administration and research opportunities.

Our program is intended to offer the necessary flexibility to tailor clinical and academic training to each senior resident's future practice and career goals, while meeting the requirements from the Royal College of Physicians and Surgeons of Canada (RCPSC) and the Collège des Médecins du Québec (CMQ).

Sincerely,

Jae-Marie Ferdinand, MD, FRCPC, FAAP
Director, Social Pediatrics Training Program

Governance and Oversight of Advanced Training in Pediatrics at McGill

The pedagogic needs of fellows in Advanced Pediatric Training differ significantly from residents in core pediatric training. This program is overseen by the Advanced Pediatric Training Committee (APC), administratively functioning as a sub-committee of the Pediatric Residency Training Committee. The APC is also responsible for the coordination of the fourth year of Pediatrics, and for each of the other fellowships which may be offered to graduate Pediatrics trainees. The APC sub-committee is composed of the following members:

- Pediatric Residency Program Director or Directors (Chair)
- Coordinators of the fourth year of Pediatrics and of each fellowship
- Division Director of the Division of General Pediatrics
- Research Coordinator
- One Resident Representative for the fourth year of training and one per fellowship program
- Other Division of General Pediatrics Faculty may be invited to sit on the committee as appropriate

The Mandate of this committee is to assist the Pediatric Residency Program Director in overseeing the quality of the educational experiences of all advanced pediatrics fellows, and for the fourth year of residency, ensuring that the program meets the training requirements from the RCPSC and the CMQ. As such the committee addresses training problems and assesses resident's performance and progress through the advanced pediatric training. In addition to the Pediatric Program Director, a staff representative and a resident representative from the APC also sit on the Pediatric Residency Training Committee and act a liaison to this committee.

The minimum frequency of meeting for the Advanced Pediatrics Training Committee is four times/year.

Mission

To advance the field of Social Pediatrics through the support of Advanced Pediatric Training for pediatricians who will act as champions of positive change for the health of vulnerable populations.

Vision

All graduates will have the medical expertise, advocacy and research skills to engage, collaborate and help empower socially vulnerable populations. These graduates will also possess skills in lobbying for health policy change, health promotion, and will contribute to the knowledge growth of socially disadvantaged children.

Background

The Department of Pediatrics at McGill University has a long history of participating in the care of disadvantaged populations. There has been a core pediatrics rotation in social pediatrics for second year residents since 2002. A number of pediatricians affiliated with the department practice in socially disadvantaged urban areas, have links to community-based health organizations and are involved in community-based advocacy. There are long established programs in multiculturalism and Aboriginal health. Finally, there is a long tradition in Global Health within the department. Thus the resident interested in focusing on training in social pediatrics and models of care that are community based and sensitive to social context will have excellent opportunities to do so within the Department of Pediatrics at McGill University.

The evolution of pediatric practice has made the time ripe to develop the idea of a social medicine focus in the training of professionals in child health. Over the last 60 years, pediatrics has evolved from a specialty dealing with largely acute diseases to one with a significant population of children with chronic diseases and special needs. In the 21st century, pediatric practice continues to evolve, and research demonstrates that social factors clearly have long lasting effects on the health of children, and later as adults.

Medical Training

Having stated that an understanding of the social determinants of health and the effect of social context on health is integral to the training of all child health professionals, we recognize the need to enrich the community of pediatricians with individuals who possess the requisite knowledge, skills, and sensitivity to act as champions of positive change for the health of disadvantaged populations. Such a person must possess sound medical expertise in the specific health problems of socially vulnerable populations, the skills to appropriately engage and collaborate with communities, and the attitudes that have social justice as a core value. Clinical rotations are tailored to this training philosophy and are mostly community-based.

Clinical exposures generally run in a longitudinal fashion (e.g., one day/week over several months, mixed in with other similar exposures), and take place in a variety of community organizations in and around Montreal. These organizations have in common that they are rooted in the communities that they serve (providing community empowering models of care among socially vulnerable populations), with clinical supervisors committed to advocacy within the specific populations. A list of organizations is in the Annex.

To round out clinical experience, residents are able to undertake longitudinal electives in specific clinical areas (tailored to their needs and future career) in selected specialty and general pediatrics clinics at the Montreal Children's Hospital. Residents also undertake one mandatory month on the pediatric inpatient consult service (includes Child Protection), with significant teaching duties within the Division of General Pediatrics at the Montreal Children's Hospital. Ultimately, we seek to encourage the development of a diverse next generation of pediatricians, who are prepared as a group to respond to the needs of the children of Quebec, Canada, and the World.

Advanced Academic Skills

Experts in social pediatrics must not only gain complex medical expertise; they must also develop academic skills (including research and/or advocacy skills) in order to contribute to the improvement of the health of disadvantaged populations at the population health level. We see the social pediatrician as a physician who is able to undertake community-based medical research, who has the skills in community activism and lobbying for health policy change, and who views health promotion as a core value. Such an individual will incorporate this practice within an ethos that seeks to empower the communities that he or she serves.

Academic training, then, for the advanced trainee in social pediatrics will make use of the many links that have been made with the leadership in other faculties at McGill University, notably Social Work, Law, Epidemiology and Anthropology. The leadership in these faculties is very open to the idea of pediatric trainees receiving training with them in order to develop the academic skills needed to function as a positive agent of social change, and residents are

expected to undertake a major scholarly project in a domain pertinent to social pediatrics. Such projects might include: community-based clinical research (e.g., “epidemiology of Hepatitis C among street youth in Montreal”), advocacy (e.g., “improving access to health care for new refugees to Montreal”), or in other scholarly fields such as Medical Ethics, or Medical Education. Projects are assessed for suitability based upon relevance to the care of vulnerable pediatric and youth populations.

General Principles

- Residents continue (or start if they are new to the program) the Residents’ Continuity Clinic or a similar community based clinic throughout the 12 months of fellowship.
- Many of the exposures can be arranged to run longitudinally, rather than block by block.
- All residents are expected to contribute to the development of the protected teaching curriculum for advanced trainees.
- All residents will participate in the PHRESCA program (The Public Health Research Epidemiology Statistics Curricula). See Annex for information and sample curriculum.
- All residents are expected to complete and present the results of a scholarly project. The topic (e.g., advocacy, policy promotion, research), scale and presentation will depend on the resident’s training and career goals.
- On call duties. (see Annex)
- All Residents will have teaching duties within the Division of General Pediatrics, as a scholar role expectation e.g., in-training OSCE for pediatrics residents, Chief of Service rounds, teaching to medical students and junior pediatrics residents on the wards, Pediatric Consultation Center (PCC) or Residency Continuity Clinic (RCC) outreach education or other teaching.

Sample Rotation Training Grid (12 months)

Block	Rotations
1	Pediatric Inpatient Consult Service (includes Child Protection)
2	Sub-specialty
3	Junior Ward Attending or Ambulatory / Community Clinics
4	Ambulatory / Community Clinics
5	Ambulatory / Community Clinics
6	Research / Advocacy Project or Ambulatory / Community Clinics
7	Vacation
8	Research / Advocacy Project or Ambulatory / Community Clinics
9	Research / Advocacy Project or Ambulatory / Community Clinics
10	Research / Advocacy Project or Ambulatory / Community Clinics
11	Research / Advocacy Project or Ambulatory / Community Clinics
12	Research / Advocacy Project or Ambulatory / Community Clinics
13	Research / Advocacy Project or Ambulatory / Community Clinics

Educational Objectives of the Social Pediatrics Fellowship
(based on the Royal College of Physicians and Surgeons of Canada document
“CanMEDS 2015, Physician Competency Framework”)

These objectives are complementary to those described in the 2015 Royal College of Physicians and Surgeons of Canada document Objectives of Training in Pediatrics. At the end of the Social Pediatrics Fellowship Program the trainee will demonstrate the following skills:

Medical Expert

- Demonstrate the advanced knowledge, attitude and skills necessary to care for socially disadvantaged children, *including*:
 - Knowledge of the Social Determinants of Health; specifically, the demographics of social vulnerability and the assessment and management of common health problems encountered by socially vulnerable populations, including developmental, mental health and nutritional problems.
 - Identify and explore different models of care that are sensitive to the populations served and empowering of the patients and families. *By the end of their fellowship, residents should demonstrate their ability to effect positive change in these communities.*
 - Demonstrate proficient assessment and management skills of common health problems encountered by socially vulnerable populations.
 - Assess a child and family’s social context for vulnerability and resilience, and then incorporate this knowledge in the management plan.
 - Identify and explore the major impact exposure to social disadvantage has on health status and the pediatrician’s role in early intervention and ongoing management.
- Demonstrate the advanced knowledge, attitude and skills to identify ethical dilemmas, assemble pertinent information, and conduct an analysis with recommendations; if needed, in consultation with a Clinical Ethicist.
- Demonstrate the advanced knowledge, attitude and skills to conduct the medical evaluation and management of suspected child abuse and neglect.
- Demonstrate knowledge of the mandate of Youth Protection Services and the medico-legal responsibilities of all healthcare workers.
- Perform a complete assessment and develop management plans for children under the care of Youth Protection Services.

Communicator

Demonstrate advanced skills in communicating across diverse socially vulnerable populations, *including:*

- Exhibit a respectful, empathetic and non-judgemental approach when interacting with socially diverse populations.
- Address challenging communication issues e.g., with patients and families who do not speak one of the official languages.
- Become effective partners with these families in managing their children's health care.
- Develop rapport and trust while addressing challenging communications with patients and families e.g., ensuring comprehension by those with limited education and/or life experience.
- Exhibit advanced written communication, documentation and listening skills.

Collaborator

- Demonstrate an advanced understanding of the role of networks and partnerships between physicians, other health care professionals and community organizations in improving health care delivery to socially disadvantaged populations.
- Participate effectively in interprofessional and interdisciplinary team meetings occurring in a variety of environments e.g., community health centers, schools, outreach centers, Youth Protection centers, child care centers, harm reduction centers, etc.
- Liaise (interface) in various interprofessional environments that meet the needs of socially vulnerable children e.g., community organizations, schools, outreach vans and harm reduction clinics.

Manager

- Identify and work collaboratively with healthcare professionals in leadership roles, *including*, Health care organizations caring for socially disadvantaged children, and within the Department of General Pediatrics.
- Demonstrate the advanced knowledge, skills, and attitudes necessary to assume leadership roles in interprofessional health care organizations caring for socially disadvantaged children, *including:*
 - Principles of change management.
 - Organization of the health care system (with the focus on marginalization).
 - Social services network.
 - Time and resource management.

Health Advocate

- Advocate on behalf of vulnerable populations at the individual and family levels (may include engaging communities, assessing and collectively assigning advocacy strategies to address their needs).
- Identify opportunities for advocacy, health promotion and disease prevention at the individual, community, provincial and federal levels.
- Apply the process of quality improvement to prevention and health promotion e.g., during clinical encounters, simulation exercises, presentations, etc.

Scholar

- Demonstrate an evidence-based approach to the understanding of health problems of the socially disadvantaged.
- Demonstrate the ability to conduct a scholarly or research project reflecting a social issue confronting the pediatric population.
- Demonstrate advanced understanding of the Principles of Ethics.
- Demonstrate effective teaching skills at multiple levels and inter-professionally.

Professional

- Demonstrate the highest standard of professional behavior with vulnerable populations, including, honesty, integrity, responsibility, self-discipline, compassion, respect and sensitivity to diversity.
- Demonstrate knowledge of legal and ethical rules of professional behavior, including, patient confidentiality issues.
- Demonstrate the knowledge, attitude and skills necessary to sustain personal health and wellbeing.
- Recognize own limitations and seek advice when needed.

JM Ferdinand, May 2016

Annex

On Call Responsibilities

Junior staff model

- Sites for calls to be determined based on discussion between resident and fellowship coordinator
- Home calls 9 per block
- Calls related to clinical service (eg Pediatric Consults, Child Protection, Sexual Assault, Wards, Foster Care, etc)
- 1-2 ER shifts per block

PHRESCA Program

Summary

The Public Health Research Epidemiology Statistics Curricula (PHRESCA) is a course that encompasses major research topics including research methods, study design, data management, statistics, critical appraisal, research writing skills, time management, and ethics. Courses take place twice per month, and are spanned over one year.

Sample Curriculum

Presentation Topic	Presenter
Orientation / Introduction session (PHRESCA / CCHCSP)	E Constantin / C Quach / E Mok
CCHCSP	C Quach
Introduction to Epidemiology and Study Design I	E Constantin
CCHCSP	C Quach
Introduction to Epidemiology and Study Design II	E Mok
CCHCSP	C Quach
Searching and Managing Medical Literature	E Guadagno / G Gore
CCHCSP	C Quach
Developing a Research Question / Designing a Study	C Quach
CCHCSP	C Quach
Sample Size / Power Calculations Workshop	E Mok
Data Management	E Mok
CCHCSP	C Quach
PHRESCA / CHCSP	TBD
Ethics	L Seller

Curriculum committee

Evelyn Constantin, PHRESCA Course Director
Robert Brouillette, PHRESCA Associate Course Director
Elise Mok, PHRESCA Associate Course Director
Caroline Quach, CCHCSP McGill Centre Leader

Suggested list of Scholar Competencies Training Opportunities

(March 2015)

Advanced Pediatrics Trainee as Learners:

- Faculty Development Workshop, Fac. of Medicine, McGill Conferences
- Fellows weekly teaching
- General Pediatrics Rounds (and all other Rounds at the hospital)
- Graduate level courses

Advanced Pediatrics Trainee as Teachers:

- Interprofessional opportunities (allied health professional rounds within and outside the hospital)
- Medical student curriculum
- Resident teaching (didactic and/or bedside)
- Physical exam teaching
- General Pediatrics Evidence Based Rounds
- Canadian Pediatric Society - presentations or workshops
- Resident retreat (workshop)
- Practical Problems in Pediatrics
- PALS/NRP
- Elementary/high schools
- Family medicine or pediatric community practices
- Community Pediatricians evening rounds

Community Based Clinics

Assistance aux Enfants en Difficulté (AED) www.fondationdrjulien.org	
Address 1600 Aylwin Street, Montreal, QC, H1W 3B8 (Metro Joliette)	
Contact person Audrey Veilleux Administrative Coordinator	email aveilleux@pediatriesociale.org Telephone 514 527-3777 ext 247 / 514 528-8488
Site supervisors Dr Gilles Julien, Dr Julie Belanger	
Description AED, a non-profit organization, has held as its mission to help children (0-14 years old) and their families in difficulty. In search for local solutions to improve children's conditions of life, the team prioritizes working within a network and implementing the social pediatrics approach promoted by Dr Gilles Julien. Whose practice includes children of extreme social disadvantage (e.g., multigenerational welfare, parents with chemical dependence/prostitution, etc). Participation in clinical meetings with Dr Julien and the Social Pediatrics team in community. Clinic on Mondays (9h-16h30) Dr Belanger; Tuesdays (9h-12h or 16h30) Dr Julien; Wednesdays (9h-16h30) Dr Belanger; and Thursdays (9h-16h30) TBD.	

Batshaw Health Services Clinic www.batshaw.qc.ca/en/node	
Address 6 Weredale Park, Westmount, QC, H3Z 1Y5	
Telephone 514 937-9581 ext 1310	
Site supervisors Dr Geoffrey Dougherty (geoffrey.dougherty@muhc.mcgill.ca) Dr Jae-Marie Ferdinand (jae-marie.ferdinand@muhc.mcgill.ca) Dr Diane Munz (dianemunz@yahoo.ca)	
Description Batshaw HSC is a multidisciplinary clinic designed for children in the Youth Protection system. The team consists of pediatricians, nurse clinicians, social workers, educators, psychologists, and an occupational therapist.

Relais Famille www.relaisfamille.org	
Relays Family opened its doors in 1998, the initiative of people working with the prison population.	
Often their work brought them into sympathy situation with families of detained (s). There was no resource in Quebec for these people and they had a great need to be informed, supported and accompanied in the drama they lived.	
Mission: Relays Family is a nonprofit organization that provides a support service for families with a loved pending detention, detention or release following imprisonment. These families often feel isolated. Relays Family supports and helps them to live as serenely as possible their situation.	
The overall objective of Family Relais is joining families and people who want to "pass through" without being destroyed by feelings of shame, fear, rejection and guilt. Often they will be enriched by this trying experience. We firmly believe that any situation, whether negative it may be, can be turned into a fruitful experience. We are serving this amazing power of life.	
Relays Family Community is the only organization in Quebec dedicated exclusively to families and relatives of those pending detention, detention or release following imprisonment.	
Coordinator Telephone 514 419-6632	660 Villeray St, suite 2.103, Montreal H2R 1J1
