Introduction

Dear Applicant,

The Department of Pediatrics at McGill University offers advanced pediatrics training for senior pediatrics trainees who choose to develop a career in Social Pediatrics. Candidates to this program are required to have completed a fourth year of training in General Pediatrics and to meet eligibility requirements of McGill University.

This 12 month fellowship is intended for candidates wishing to develop the medical expertise and skills to engage, collaborate and help empower socially vulnerable populations, and to act as champions of positive change for the health of these populations.

The educational experiences include clinical training, medical education, advocacy, administration and research opportunities.

Our program is intended to offer the necessary flexibility to tailor clinical and academic training to each fellow’s future practice and career goals, while meeting the requirements from the Royal College of Physicians and Surgeons of Canada (RCPSC) and the Collège des Médecins du Québec (CMQ).

Sincerely,

Dr. Jae-Marie Ferdinand

Governance and Oversight of Advanced Training in Pediatrics at McGill

The pedagogic needs of fellows in Advanced Pediatric Training differ significantly from residents in core pediatric training. This program is overseen by the Advanced Pediatric Training Committee (APC), administratively functioning as a sub-committee of the Pediatrics Residency Training Committee. The APC is also responsible for the coordination of the fourth year of Pediatrics, and for each of the other fellowships offered to graduate Pediatrics trainees. The APC sub-committee is composed of the following members:

- Pediatric Residency Program Director or Directors (Chair)
- Coordinators of the fourth year of Pediatrics and of each fellowship
- Division Director of the Division of General Pediatrics
- Research Coordinator
- One resident representative for the fourth year of training and one fellow representative for the fellowship programs
- Other Division of General Pediatrics Faculty may be invited to sit on the committee as appropriate

The Mandate of this committee is to assist the Pediatric Residency Program Director in overseeing the quality of the educational experiences of all advanced pediatrics fellows, and for the fourth year of residency, ensuring that the program meets the training requirements from the RCPSC and the CMQ. As such the committee addresses training problems and assesses trainee performance and progress through the advanced pediatric training. In addition to the Pediatrics Program Director(s), a resident representative from the APC also sits on the Pediatrics Residency Training Committee and acts a liaison to this committee.

The minimum frequency of meeting for the Advanced Pediatrics Training Committee is four times/year.
Mission
To advance the field of Social Pediatrics through the support of Advanced Pediatric Training for pediatricians who will act as champions of positive change for the health of vulnerable populations.

Vision
All graduates will have the medical expertise, advocacy and research skills to engage, collaborate and help empower socially vulnerable populations. These graduates will also possess skills in lobbying for health policy change, health promotion, and will contribute to the knowledge growth of socially disadvantaged children.

Background
The Department of Pediatrics at McGill University has a long history of participating in the care of disadvantaged populations. There has been a core pediatrics rotation in social pediatrics for second year residents since 2002. A number of pediatricians affiliated with the department practice with socially disadvantaged populations, have links to community-based health organizations and are involved in community-based advocacy. There are long established programs in multiculturalism, Aboriginal health and children under Youth Protection. Finally, there is a long tradition in Global Health within the department. Thus the fellow interested in focusing on training in social pediatrics and models of care that are community based and sensitive to social context will have excellent opportunities to do so within the Department of Pediatrics at McGill University.

The evolution of pediatric practice has made the time ripe to develop the idea of a social medicine focus in the training of professionals in child health. Over the last 60 years, pediatrics has evolved from a specialty dealing with largely acute diseases to one with a significant population of children affected by the social determinants of health, with chronic diseases and special needs. In the 21st century, pediatric practice continues to evolve, and research demonstrates that social factors clearly have long lasting effects on the health of children, and later as adults.
Medical Training

Having stated that an understanding of the social determinants of health and the effect of social context on health is integral to the training of all child health professionals, we recognize the need to enrich the community of pediatricians with individuals who possess the requisite knowledge, skills, and sensitivity to act as champions of positive change for the health of disadvantaged populations. Such a person must possess sound medical expertise in the specific health problems of socially vulnerable populations, the skills to appropriately engage and collaborate with communities, and the attitudes that have social justice as a core value. Clinical rotations are tailored to this training philosophy and are mostly community-based.

Clinical exposures generally run in a longitudinal fashion (e.g., one day/week over several months, mixed in with other similar exposures), and take place in a variety of community organizations in and around Montreal. These organizations have in common that they are rooted in the communities that they serve (providing community empowering models of care among socially vulnerable populations), with clinical supervisors committed to advocacy within the specific populations. A list of organizations is in the Annex.

To round out clinical experiences fellows are able to undertake longitudinal electives in specific clinical areas (tailored to their needs and future career) in selected specialty and general pediatrics clinics at the Montreal Children’s Hospital. Fellows also undertake one mandatory month on the pediatric inpatient consult service (includes Child Protection), with significant teaching duties within the Division of General Pediatrics at the Montreal Children’s Hospital. Ultimately, we seek to encourage the development of a diverse next generation of pediatricians, who are prepared as a group to respond to the needs of the children of Quebec, Canada, and the World.

Advanced Academic Skills

Experts in social pediatrics must not only gain complex medical expertise; they must also develop academic skills (including research and/or advocacy skills) in order to contribute to the improvement of the health of disadvantaged populations at the population health level. We see the social pediatrician as a physician who is able to undertake community-based medical research, who has the skills in community activism and lobbying for health policy change, and who views health promotion as a core value. Such an individual will incorporate this practice within an ethos that seeks to empower the communities that he or she serves.

Academic training, then, for the advanced trainee in social pediatrics will make use of the many links that have been made with the leadership in other faculties at McGill University, notably Social Work, Law, Epidemiology and Anthropology. The leadership in these faculties is very open to the idea of pediatric trainees receiving training with them in order to develop the academic skills needed to function as a positive agent of social change, fellows are
expected to undertake a major scholarly project in a domain pertinent to social pediatrics. Such projects might include: community-based clinical research (e.g., “epidemiology of Hepatitis C among street youth in Montreal”), advocacy (e.g., “improving access to health care for new refugees to Montreal”), or in other scholarly fields such as Medical Ethics, or Medical Education. Projects are assessed for suitability based upon relevance to the care of vulnerable pediatric and youth populations.

**General Principles**

- Fellows continue (or start if they are new to the program) the Residents’ Continuity Clinic or a similar community based clinic throughout the 12 months of fellowship.
- Many of the exposures can be arranged to run longitudinally, rather than block by block.
- All fellows are expected to contribute to the development of the protected teaching curriculum for advanced trainees.
- All fellows will participate in the CCHCSP program (The Canadian Child Health Clinician Scientist Program). See Annex for information and sample curriculum.
- All fellows are expected to complete and present the results of a scholarly project. The topic (e.g., advocacy, policy promotion, research), scale and presentation will depend on the fellow’s training and career goals.
- On call duties. (see Annex)
- All fellows will have teaching duties within the Division of General Pediatrics, as a scholar role expectation e.g., in-training OSCE for pediatrics residents, Chief of Service rounds, teaching to medical students and junior pediatrics residents on the wards, Pediatric Consultation Center (PCC) or Residency Continuity Clinic (RCC) outreach education or other teaching.

Educational Objectives of the Social Pediatrics Fellowship
(based on the Royal College of Physicians and Surgeons of Canada document
Physician Competency Framework”)

These objectives are complementary to those described in the Royal College of Physicians and Surgeons of Canada document Objectives of Training in Pediatrics. At the end of the Social Pediatrics Fellowship Program the trainee will demonstrate the following skills:

Medical Expert

- Demonstrate the advanced knowledge, attitude and skills necessary to care for socially disadvantaged children, **including**:
  - Knowledge of the Social Determinants of Health; specifically, the demographics of social vulnerability and the assessment and management of common health problems encountered by socially vulnerable populations, including developmental, mental health and nutritional problems.
  - Identify and explore different models of care that are sensitive to the populations served and empowering of the patients and families. **By the end of their fellowship, fellows should demonstrate their ability to effect positive change in these communities.**
  - Demonstrate proficient assessment and management skills of common health problems encountered by socially vulnerable populations.
  - Assess a child and family’s social context for vulnerability and resilience, and then incorporate this knowledge in the management plan.
  - Identify and explore the major impact exposure to social disadvantage has on health status and the pediatrician’s role in early intervention and ongoing management.
- Demonstrate the advanced knowledge, attitude and skills to identify ethical dilemmas, assemble pertinent information, and conduct an analysis with recommendations; if needed, in consultation with a Clinical Ethicist.
- Demonstrate the advanced knowledge, attitude and skills to conduct the medical evaluation and management of suspected child abuse and neglect.
- Demonstrate knowledge of the mandate of Youth Protection Services and the medico-legal responsibilities of all healthcare workers.
- Perform a complete assessment and develop management plans for children under the care of Youth Protection Services.
- Actively contribute, as an individual and as a member of the team providing care, to the continuous improvement of health care quality and patient safety.
- Recognize and respond to harm from health care delivery, including patient safety incidents.
- Adopt strategies that promote patient safety and address human and system factors.
Communicator

Demonstrate advanced skills in communicating across diverse socially vulnerable populations, including:

- Exhibits a respectful, empathetic and non-judgemental approach when interacting with socially diverse populations.
- Becomes an effective partner with families in managing their children’s health care by engaging patients and their families in developing plans that reflect the patient’s health care needs and goals.
- Develops rapport and trust while addressing challenging communications with patients and families e.g., ensuring comprehension by those who do not communicate in one of the official languages, who may have limited education and/or life experience.
- Discloses harmful patient safety incidents to patients and their families accurately and appropriately.
- Assists patients and their families to identify, access and make use of information and communication technologies to support their care and manage their health
- Exhibits advanced written communication, documentation and listening skills by  
  a. Documenting and sharing written and electronic information about the medical encounter to optimize clinical decision-making, patient safety, confidentiality, and privacy  
  b. Communicating effectively using a written health record, electronic medical record, or other digital technology  
  c. Sharing information with patients and others in a manner that respects patient privacy and confidentiality and enhances understanding.

Collaborator

- Demonstrate an advanced understanding of the role of networks and partnerships between physicians, other health care professionals and community organizations in improving health care delivery to socially disadvantaged populations.
- Participate effectively in interprofessional and interdisciplinary team meetings occurring in a variety of environments e.g., community health centers, schools, outreach centers, Youth Protection centers, child care centers, harm reduction centers, etc.
- Liaise (interface) in various interprofessional environments that meet the needs of socially vulnerable children e.g., community organizations, schools, outreach vans and harm reduction clinics.
Hands over the care of a patient to another health professional to facilitate continuity of safe patient care

Determines when care should be transferred to another physician or health care professional

Demonstrates safe handover of care, both verbal and written, during a patient transition to a different healthcare professional, setting, or stage of care

Leader

Identify and work collaboratively with healthcare professionals in leadership roles, including, Health care organizations caring for socially disadvantaged children, and within the Department of General Pediatrics.

Demonstrate the advanced knowledge, skills, and attitudes necessary to assume leadership roles in interprofessional health care organizations caring for socially disadvantaged children, including:

- Excellent time, resource and management skills, and a vision for positive change.
- Contributing significantly to the improvement of health care delivery in teams, organizations, and systems, for example a. Applies the science of quality improvement to contribute to improving systems of patient care b. Contributes to a culture that promotes patient safety c. Analyzes patient safety incidents to enhance systems of care d. Uses health informatics to improve the quality of patient care and optimize patient safety.

- Engages in the stewardship of health care resources.
- Allocates health care resources for optimal patient care.
- Applies evidence and management processes to achieve cost-appropriate care.
- Facilitates change in health care to enhance services and outcome.
- Identifies and works in a Leadership role with healthcare leaders in inter professional health care organizations caring for socially disadvantaged children.

Health Advocate

- Advocate on behalf of vulnerable populations at the individual and family levels (may include engaging communities, assessing and collectively assigning advocacy strategies to address their needs).
- Identify opportunities for advocacy, health promotion and disease prevention at the individual, community, provincial and federal levels.
• Apply the process of quality improvement to prevention and health promotion e.g., during clinical encounters, simulation exercises, presentations, etc.

Scholar

• Demonstrate an evidence-based approach to the understanding and ongoing learning of health problems related to the social determinants of health.
• Demonstrate the ability to conduct a scholarly or research project reflecting a social issue confronting the pediatric population.
• Demonstrate advanced understanding of the Principles of Ethics.
• Demonstrate effective teaching skills at multiple levels and inter-professionally, including facilitating the education of patients, families, trainees, and other health professional colleagues
• Ensure patient safety is maintained when learners are involved

Professional

• Demonstrate the highest standard of professional behavior with vulnerable populations, including, honesty, integrity, responsibility, self-discipline, compassion, respect and sensitivity to diversity.
• Demonstrate a commitment to society by recognizing and responding to societal expectations in health care.
• Demonstrate a commitment to patient safety and quality improvement.
• Demonstrate a commitment to patients by applying best practices and adhering to high ethical standards.
• Exhibit professional behaviours in the use of technology-enabled communication.
• Demonstrate a commitment to physician health and well-being to foster optimal patient care, including a. Exhibiting self-awareness b. Managing influences on personal well-being and professional performance c. Managing personal and professional demands for a sustainable practice throughout the physician life cycle d. Promoting a culture that recognizes, supports and responds effectively to colleagues in need.

JM Ferdinand, May 2018
Annex

On Call Responsibilities

Junior staff model

• Sites for calls to be determined based on discussion between fellow and fellowship coordinator
• Home calls 9 per block
• Calls related to clinical service (eg Pediatric Consults, Child Protection, Sexual Assault, Wards, Foster Care, etc)

CCHCSP Program

Summary

The CCHCSP (Canadian Child Health Clinician Scientist Program) is a course that encompasses major research topics including research methods, study design, data management, statistics, critical appraisal, research writing skills, time management, and ethics. Courses take place twice per month, and are spanned over one year.

CCHCSP McGill Center Leader: Dr. Pia Wintermark

Moderators:
Dr. Aline Bogossian
Dr. Patricia Fontela

</table>

**Description**

Dr Julien practices in a very economically disadvantaged part of Montreal (Hochelaga-Maisonneuve district). His practice includes children of extreme social disadvantage (multigenerational welfare, parents with chemical dependence/prostitution). In addition to exposure to social medicine, fellows will have a chance to observe Dr Julien’s considerable advocacy on behalf of his clientele.

**Description**

“Many substance-dependent mothers are hesitant to seek drug addiction treatment for fear that they will lose legal custody of their children. They often feel judged as mothers and prejudiced against when priority is given to the protection of the child over their own need for rehabilitation treatment. In response to these concerns, Portage created a unique and innovative residential program to allow mothers with young children and pregnant women suffering from drug addiction to maintain custody of their children while in treatment. The Mother and Child program was established in 1996. The Mother and Child Program allows the family unit to stay together during this important learning and growing period. The mothers work on strengthening their bonds with their children while they address their addiction to drugs, their role as a parent, and problems of isolation, health care, and family and interpersonal relationships. The residential program is based on the therapeutic community approach and provides competency-based therapy through accredited treatment techniques.” *(from the Portage website)*

Clinics held Mondays 13h00-17h00

**Mountain Sights Community Center**
The Mountain Sight Community Center exists since 1992 and intervenes with families and residents (adults and children 0-17 years old) on an individual and collective basis. Its activities, services and preventive measures have an impact on the overall health of its community. The district is multiethnic, economically disadvantaged and heavily populated.

**Native Friendship Centre of Montreal Street Patrol**
The center was created in 1974. Its mission is to improve the quality of life for members of the Aboriginal community who are homeless and those at risk of homelessness, to stabilize the sharp transition and the huge cultural shock they suffer by migrating to the urban environment of Montreal.

The Street Patrol is a mobile referral, harm reduction and transport unit, which patrols throughout downtown to serve homeless and at-risk youth & adults. Its services include distribution of meals, blankets and other materials; clean needle exchange; peer counseling; referrals to health and social services; check-ups on at-risk individuals and transportation to shelters.

### Répit-Providence

Répit-Providence exists since 1995. It provides short term stay for children 0-5 years old and their siblings up to 12 years old. Its mission is to prevent risk situations and the placement of children. Respite also gives relief to families that are going through a burn-out or a temporary crisis. The respite is part of an intervention plan organized in conjunction with the family. Mostly on weekends (Saturday afternoon).

### YMCA-PRAIDA Asylum Seekers and Refugees Healthcare Access Project

The YMCA at 4039 Tupper Avenue accommodates newly arrived asylum seekers and RAMQ-funded refugees. This population has specific health care needs and many of them struggle to access services.

This project consists of information sessions about how and where asylum seekers and RAMQ-funded refugees can access healthcare services in Quebec. The fellow’s responsibility will be to present the material and then field questions from the audience. The resident will have scheduled time for revision of the content with one of the Pediatric residents prior to the presentation date.
