Training the next generation of clinicians: possible roles of the RCN

Joanne Alfieri – Radiation Oncology Program Director

James Tsui, PGY-3 Radiation Oncology

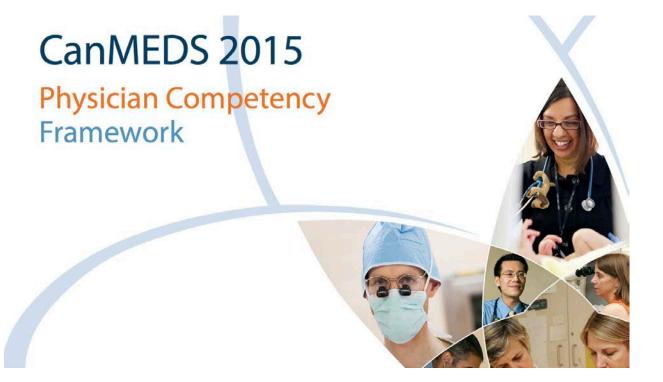

William Parker - Clinical chief, Department of Medical Physics

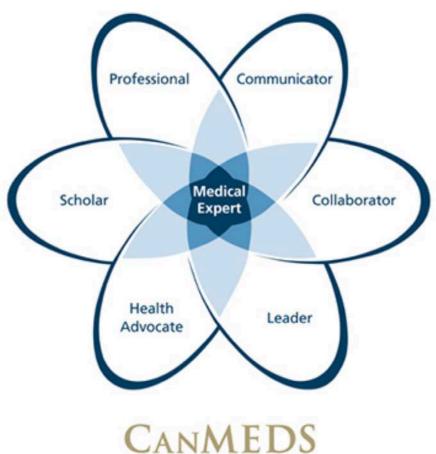

Eduardo Franco – Chair, Department of Oncology

Agenda

- Quality Improvement (QI) curriculum for radiation oncology residents
 - Joanne Alfieri
- Leading a QI project a resident's perspective
 - James Tsui
- Mentoring a resident through a QI project
 - William Parker
- Opportunities for advanced training in QI through the Graduate Program in Oncology
 - Eduardo Franco

Patient safety, Quality improvement & Resource stewardship

The CanMEDS 2015 Milestones Guide

	Entry to Residency	Transition to Discipline	Foundations of Discipline	Core of Discipline		tion to ctice	Advanced Expertise		
Medical Expert									
5.1 Recognize and respond to harm from health care delivery, including patient safety incidents	Describe the scope and burden of health-care-related harm Define the types of patient safety incidents	Recognize the occurrence of a patient safety incident Differentiate outcomes of medical conditions and diseases from complications related to the inherent risks of treatments and from patient safety incidents	Prioritize the initial medical response to harmful patient safety incident to mitigate further injury Incorporate, as appropriate, into a differential diagnoses, harm from health care delivery	Report patient safety incidents to appropriate institutional representatives Recognize near-misses in real time and respond to correct them, preventing them from reaching the natient Participate in an of patient safety incidents Apply the princip situational aware	analysis	Adopt st	trategies that	Evaluate the impact of system changes on the	
5.2 Adopt strategies that promote patient safety and address human and system factors	Describe the individual factors that can affect human performance, including sleep deprivation and stress Describe system factors that can affect patient safety, including resource availability and physical and environmental factors	Describe common types of cognitive and affective bias Describe the principles of situational awareness and their implications for medical practice	Use cognitive aids such as procedural checklists, structured communication tools, or care paths, to enhance patient safety Describe strategies to address human and system factors on clinical practice	clinical practice		system f	ress human and actors	Design safety initiative including those that incorporate needs and metrics identified by patients and their families	

Leader	Entry to Residency		Core of Discipline		Transition to Practice	Advanced Expertise
1.1 Apply the science of quality improvement to contribute to improving systems of patient care 1.2 Contribute to a culture that promotes patient safety	Describe the relevance of system theories in health care Describe a patient's longitudinal experience through the health care					processes to e the impact of and system on performance
	Describe the domains of health care quality Describe the features of a "just culture" approach to patient safety		Analyze and provide feedback on processes seen in one's own practice, team, organization, or system	Apply the science of quality improvement to contribute to improving systems of patient care		he science of xity to the ement of health
						e a health care that enhances and quality e the culture of tution or group
			cor of Mo pro	pat odel omo	uous improvement ient safety	afety and health quali hampion a just cultur o enhance patient afety

Quality Improvement Curriculum

- Dr. Catherine Pembroke, Clinical Fellow
- Drs. Tarek Hijal and Carolyn Freeman
- Alain Biron

McGill University Health Centre,
Department of Quality
McGill University, MedEd Class '77
Velindre Cancer Centre
Moondance Foundation

What is Quality Improvement?

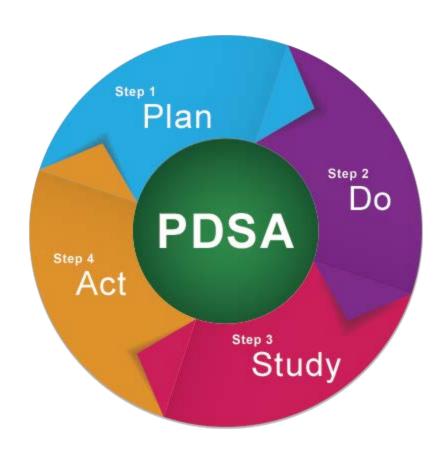

Quality improvement is a systematic approach that <u>uses specific techniques</u>, <u>methods</u>, <u>measures and strategies</u> to improve one or more dimensions of quality of health care

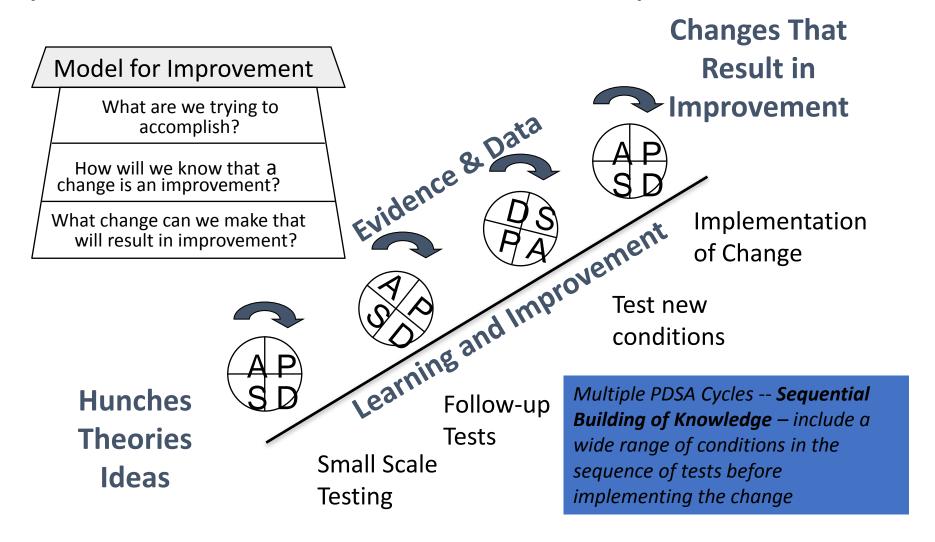

Quality Improvement in Healthcare

PDSA- Plan/Do/Study/Act

Repeated Use of the PDSA Cycle

Project Objectives

- Establishing key QI professional skills within the McGill Radiation Oncology Residency Training (PGY2-4).
- Improvements in clinical effectiveness, patient safety and experience within the department
- Program Evaluation and Improvement

QI Resident Curriculum Overview

QI Curriculum in Radiation Oncology

• QI fundamental competencies (September to December) PGY2-3

- Didactic lectures and workshops held during two academic half days throughout year.
- HQIP online modules (1-6)

• QI Intermediary competencies (December until June) PGY2-3 Each trainee will be expected to complete a QI project which includes

- Define a title and audit standards
- Create a *model for improvement* with a supervising senior.
- Collect and interpret data and instigate an appropriate change
- Re-collect data with same audit standards, has a change been of benefit?
- Present project process and findings at QI day in June

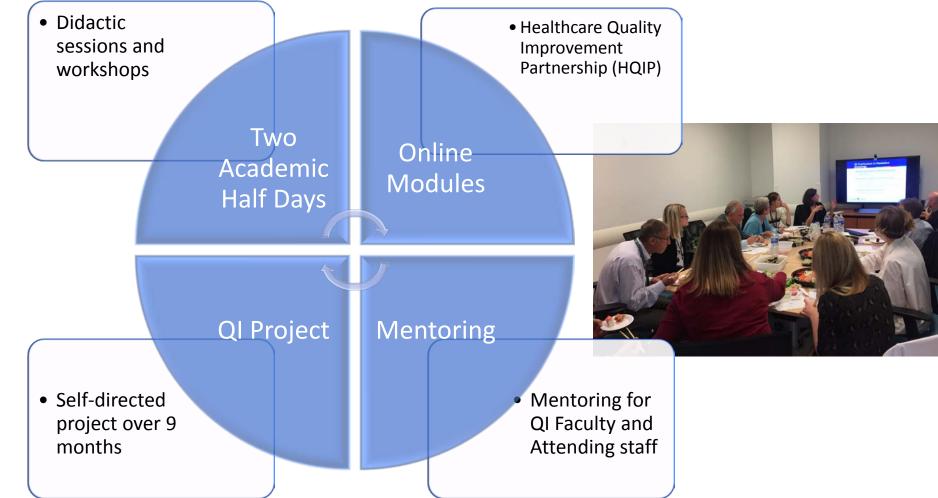

QI Advanced competencies (future years) PGY4

- Supervise a QI project
- Write abstracts and submit poster or publication.

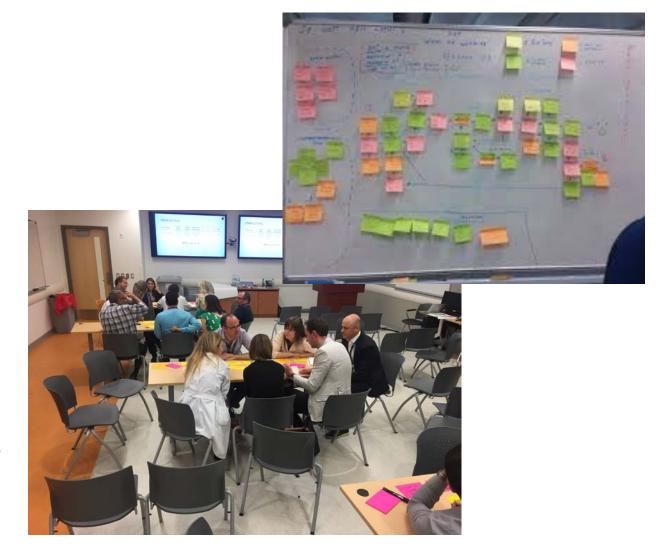

QI Teaching Methods

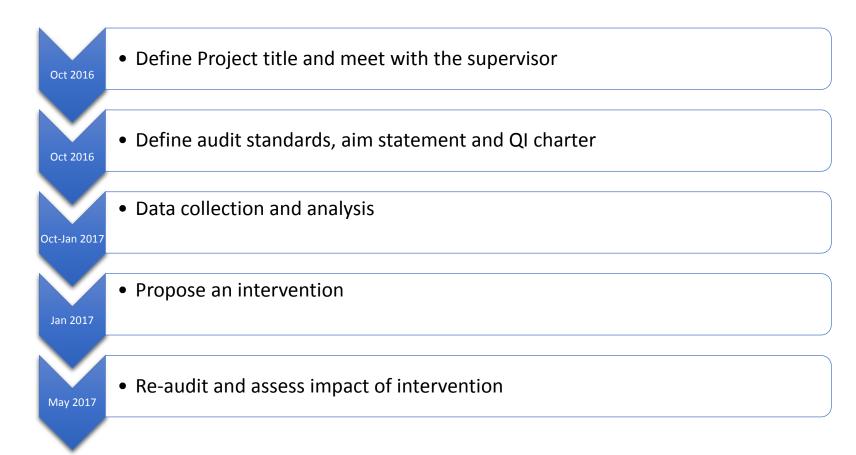

Academic Half Days Mixed Didactic and Practical Workshops

- How to conduct a QI project
 - Aim statements
 - SMART criteria
 - Project charters
 - Process mapping
 - Runcharts and methods of analysing variations in practice
 - Root cause analysis: Fishbone analysis and 5 whys
 - Using decision matrices to brainstorm possible interventions

QI Project Timeline Academic Year 2016-17

Residents Assessment

• Presentation 1

Nov 2016

Jan 2017

• Present project plan

• Balanced score card 1

• Presentation 2

• Project Findings, Proposed intervention and model for improvement

• Balanced score card 2

• Presentation 3 at QI day

• Project completion

• Balanced score card 3

QI Program Evaluation

McGill Curriculum Evaluation Proposal

QUANTITATIVE- PRE/POST

- Self-assessment questionnaires
- Quality improvement knowledge assessment tool (QI-KAT)

Before and after design/ 'theory building' concurrent evaluation designs

QUALITATIVE

- Questionnaires residents attitudes and satisfaction
- Descriptive case design

Results

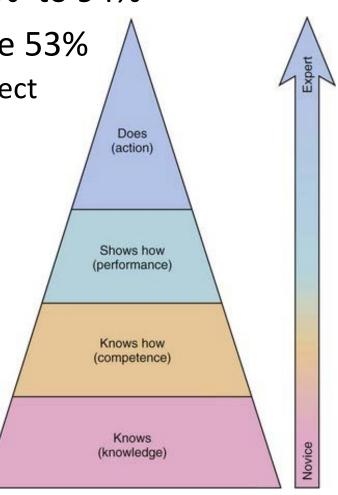

• Knowledge Pre-Post - Improvement in QI-KAT from 48% to 94%

• Self-assessment – mean satisfaction index (SI) baseline 53%

• Increased to 66.5% in those who did not complete a QI project

• Increased to 90% in those who did complete a QI project

- Learner attitudes SI increased from 50% to 75%
 - Challenges identified
 - Competing clinical demands (83%)
 - Lack of institutional culture of QI and patient safety (57%)
- Performance on QI day average score 82%

First Annual QI Day - 14th June 2017

RAISING YOUR IQ IN QI

- Residents presented their projects
- Annual QI award presented by expert judging panel
- Plenary lecture by an established QI expert Dr. Todd Pawlicki
- Departmental QI practical workshop in order to raise knowledge and awareness

Conclusion

- A new QI program has been introduced amongst the radiation oncology residents at McGill
- Formal program evaluation reveals an improvement in attitudes and QI skills
- PDSA cycle will ensure appropriate adjustments to the curriculum and teaching methods are made
