

The Principal's Prize for Outstanding Emerging Researchers

The Office of the Vice-Principal (Research and Innovation) created a new University-wide prize for outstanding emerging researchers in 2013 to encourage and celebrate our most outstanding early-career researchers.

DESCRIPTION

Up to three Principal's Prizes for Outstanding Emerging Researchers will be presented yearly to early-career faculty members (no more than ten years beyond the doctorate or other highest degree*) who have distinguished themselves by their exceptional contributions to research. The Principal's Prizes for Outstanding Emerging Researchers is a cash prize. The monetary award for 2022-2023 is \$5,000.

The selection committee will endeavour to ensure that the group of individuals honoured in a given year represents a diversity of research foci and disciplinary or interdisciplinary approaches.

*****Preference will be given to nominees who have not yet received a major non- discipline-specific external prize or award.*****

ELIGIBILITY

Nominees must be no more than ten calendar years beyond their doctorate or other highest degree awarded (**2013 or later, for the 2022-2023 competition**), be autonomous regarding their research activities and have an academic appointment at McGill University which allows the individual to supervise students and to publish research results.†

NOMINATIONS

Each Dean is invited to make one nomination per year for the Principal's Prizes, with the following exceptions for McGill's largest Faculties:

Medicine, up to three nominations

Arts, up to two nominations

Science, up to two nominations

MEMBERS OF THE SELECTION COMMITTEE

Principal or delegate

Vice-Principal (Research and Innovation) or delegate

Four previous recipients of this award or of other significant research awards

One graduate student

One undergraduate student

† Career interruptions such as maternity or paternity leave, extended sick or disability leave, clinical training or family care can be excluded from the ten-year limit and must be explained in

the nomination letter. In the case of nominees holding more than one doctorate, the ten-year limit is calculated from the first doctorate awarded.

NOMINATION PROCEDURE 2022-2023

Each nomination dossier shall include the following documents:

- A letter of nomination (maximum three pages) from the Dean of the researcher's Faculty outlining:
 - The rationale for the nomination
 - The nominee's research contributions and promise of future distinction
 - Why the nominee deserves an award as an outstanding emerging researcher
 - Career absences.
 - Confirmation that the nominee will keep their Faculty's Spring Convocation date, between May 30 and June 7, 2023 (tentative) available until the selection committee has made its decisions, or explain why it is impossible for the nominee to do so.

- The nominee's full curriculum vitae (maximum 20 pages), including the following information:
 - Publications
 - Invited lectures
 - Prizes and awards received
 - Graduate students supervised

- Two letters of reference from individuals who are experts in the nominee's field.
 - Referees should not be present or former collaborators of the nominee. (*Note: anyone with whom the nominee has co-authored publications or who has supervised the nominee is considered a collaborator of the nominee.*)
 - Referees should be external to McGill University
 - A short biographical note should be included for each referee.

Note: Persuasive letters of nomination and of reference, rather than merely summarizing factual information about the nominee's scholarly output and publication record, will

- a) explain convincingly to a non-specialist audience the significance of the nominee's discoveries and work, and*
- b) make clear in what way(s) the nominee's work is especially original, creative, or path-breaking*

Nomination dossiers must be received by the Prizes and Awards Officer in the Office of Sponsored Research, [Meredith Chatman](#), no later than **Tuesday, February 7, 2023**.

In accordance with the usual practice for nomination-based prizes and awards, nominators and successful nominees (but not unsuccessful nominees) will be informed of the selection committee's decisions.

Note: nominees are expected to be available to attend their Faculty's Spring Convocation between May 30 and June 7, 2023 (tentative dates). The letter of nomination must confirm that the nominee will keep these dates available until the selection committee has made its decisions, or explain why it is impossible for the nominee to do so.
