Course Title in Calendar :	Sleep Mechanisms and Behaviour				
<table border="1"> <tbody> <tr> <td>Rationale</td> <td>           This course is in the specialty area of a new faculty member. It addresses an area where we have no courses in Psychology nor in any other department, despite the large research representation in this area at McGill. A few undergraduate courses include 2 introductory lectures on the topic (e.g. PSYC 211, BIOL 326, BIOL 524) but the overlap is minor. The proposed course covers an important area of intersection between basic physiological processes (circadian rhythms, biological clocks) and cognition, mood and health. It adds to our offerings in Neuroscience, an area where there is enormous student interest and also to the area of Health Psychology in which our current course offerings are all at cap.         </td> </tr> </tbody> </table>		Rationale	This course is in the specialty area of a new faculty member.
