Rationale		The proposed change to ANAT 315 would be to reduce the number of lab hours per week (from 4 to 2 hours) as cadaver dissection activities are not required. Use of existing pre-dissected specimens (i.e. prosections) per se provide for effective learning of the 3D organization and inter-relationship of gross musculoskeletal anatomical structures of the upper and lower limbs as well as axial trunk.						
Responsible Instructor								
Course Description	The regional human gross anatomy of the skeleton, joints, muscles and neurovascular structures of the limbs and back.
