

POTH 455 NEUROPHYSIOLOGY

Credits: 3

Prerequisites: PHGY209 Mammalian Physiology 1 – 3 credits and
PHGY210 Mammalian Physiology 2 – 3 credits or
an equivalent knowledge base as judged by the professors

Course Coordinators:

Marie-Hélène Boudrias, Hosmer 206

Telephone: (514) 398-5457

Email: mh.boudrias@mcgill.ca

Karen Falcicchio, Davis House 34B

Telephone: (514) 398-2553

Email: karen.falcicchio@mcgill.ca

Teaching Assistants:

TBC

Communication plan: Students should post content-related questions on the discussion board of myCourses. For personal queries, course coordinators and instructors can be reached by email. In most circumstances, emails will be answered within 1 business day. Individual in-person, phone or Zoom meetings will be set when necessary.

The instructors and TAs will be responsible for evaluating specific assignments. Questions about the evaluations should be directed to the teaching assistant(s).

Course Description: This course aims provide the student with neurophysiological principles, concepts and mechanisms useful for understanding the nervous system and its aberrations in pathologies that impact upon the functioning of the individual. These principles will be illustrated by reference to normal brain functions in animals and man as well as through illustrations of the effects of their disruption in diseases and other conditions that compromise the normal functioning of the nervous system. The course also aims to prepare future rehabilitation professionals (Occupational and Physical Therapists) in the applied neurophysiological principles required to excel in clinical practice. At the end of this course, the student will understand the function of major brain structures and will have learned signs and symptoms of some important neurological disease processes that illustrate principles of brain function.

Course Structure: The course will offer a blended learning approach which will consist of in-person lectures and in-person clinical cases to link neurophysiological principles to neurological conditions.

McGill University is situated on the traditional territory of the Kanien'kehà:ka, a place which has long served as a site of meeting and exchange amongst nations. We recognize and respect the Kanien'kehà:ka as the traditional custodian of the lands and waters on which we meet today.

Student Learning Objectives: This course will cover essential competencies and milestones related to the domains of expertise, communication, collaboration and scholarship. Upon completion of this course, the student will be able to:

Course Objectives and Related Assignments					
		Exams	Preparatory quizzes	In-class Reflection	Presentation
<u>Expert</u>	1. Describe neurophysiological concepts, principles and mechanisms underlying normal functioning and explain their relationships to normal and pathological functioning of the individual.	√	√		√
	2. Identify key components of the etiology, epidemiology and clinical characteristics of common neurological conditions associated with malfunctioning of brain structures and appreciate factors leading to a differential diagnosis.	√	√		√
	3. Identify key components of the medical treatment, surgical interventions and rehabilitation associated with common neurological conditions and understand the impact of such treatment on the functional outcome of clients.	√	√		√
<u>Communicator</u>	4. Employ effective and appropriate verbal and nonverbal communication with lay public, peers and educators			√	√
<u>Collaborator</u>	5. Establish and maintain interprofessional and intraprofessional relationships while understanding the roles and responsibilities of team members.			√	√
<u>Scholarly Practitioner</u>	6. Organize available information about the neurological conditions presented and select information that is potentially important in regard to their needs as future rehabilitation specialists.			√	√
	7. Apply basic literature search and reporting principles.				√

McGill University is situated on the traditional territory of the Kanien'kehà:ka, a place which has long served as a site of meeting and exchange amongst nations. We recognize and respect the Kanien'kehà:ka as the traditional custodian of the lands and waters on which we meet today.

Course Materials:

- **Required text:** Purves, D, Augustine G.J., Fitzpatrick D, Hall W.C., LaMantia A.-S., Mooney R.D., Platt M.L, White L.E. (2022) Neuroscience (7th ed) Sinauer Associates: Sunderland, MA.
- **Required readings:** Readings for each week will be posted on myCourses
- **Lecture material:** All lecture material will be made available on myCourses before the time of the lecture as PowerPoint slides, recorded lectures, Word documents and/or web links.
- **Useful resources:** A list of resources that you may find useful is provided in Appendix B

Instructional Method:

- Lectures, case studies, presentations and exams will be held in person if the sanitary restrictions permit.
- During the in-person case studies, the clinician will provide a short overview of the condition and case. The students will then be split into small groups to answer specific questions related to the case for ~20 min. The class will then reconvene as a large group, and small each group will give share their answers. The invited clinician will provide opportunities for students to discuss and validate their answers.
- All course material can be found grouped by class period on myCourses.
- You can find information on these platforms by consulting the McGill [Remote Learning Resources](#).
- Polling may be used in this course to enhance engagement and increase interactivity.
- During a class with polling questions, you will respond to questions from the instructor from a personal device (smartphone, tablet, or laptop).
- Students should come to class with their devices charged and [connected to the Internet](#).
- Polling will be available through www.mcgill.ca/polling.
- To participate in Polling sessions, you must first register for an account by clicking on [register your account](#) at www.mcgill.ca/polling and logging in with your McGill username and password. Follow the prompts to agree to the terms of use and create your account. For more information, please visit the **Getting Started for Students** section at www.mcgill.ca/polling.
- For any technical problems with polling, please contact the IT Service Desk: <https://www.mcgill.ca/it/students>.
- If you do not have a phone, tablet, or laptop to use to respond to polling questions, please contact the instructor immediately in order for appropriate arrangements to be made.
- To maintain a safe and respectful classroom environment, please ensure that any polling responses you submit are appropriate and relevant to the question asked. Please note that unless the poll is labelled as anonymous, your responses are identifiable to the instructor. Please see the [Code of Student Conduct and Disciplinary Procedures](#).

McGill University is situated on the traditional territory of the Kanien'kehà:ka, a place which has long served as a site of meeting and exchange amongst nations. We recognize and respect the Kanien'kehà:ka as the traditional custodian of the lands and waters on which we meet today.

Student Assignment & Evaluation:

Assignment Type	Format	Due Date	% of final grade
Preparatory quizzes	<ul style="list-style-type: none"> - Weekly set of multiple-choice and fill-in the blank questions to prepare for the case presented by a clinician. - Best 9/10 will count towards the final grade. 	Each week before 12:30 PM (ET) on the day of the presentation.	15%
In-class Reflection	<ul style="list-style-type: none"> - Following each case presentation, students will be asked to answer 1 question about the topics discussed in class. 10/11 in-class reflections will count, including the reflection after the student presentations where everyone is expected to be present. 	End of each class	10%
Midterm Exam	<ul style="list-style-type: none"> - Midterm exam containing multiple choice and short answer questions that cover the course material from week 1 to week 5. 	October 20 th , Time 12:30-14:30	25%
Presentations	<ul style="list-style-type: none"> - Group presentations on the assessment and treatment of a client with a neurological condition & 1-page completed condition resource tool. 	Nov. 10 th	15%
Final Exam	<ul style="list-style-type: none"> - Final exam containing multiple choice and short answer questions that cover from week 7 to week 14. 	Exam period	35%

Special Requirements for Course Completion & Program Continuation: In order to pass the course, a grade of at least C+ (60%) must be obtained as a total course mark. A supplemental exam is permitted in this course. Please refer to the McGill University Health Sciences Calendar for information on University regulations regarding final examinations and supplemental examinations. The modalities used for remedial work will be determined by the instructors on a per case basis.

Plagiarism/Academic Integrity: McGill University and the Faculty of Medicine and Health Sciences value academic integrity. Therefore, all students must understand the meaning and consequences of cheating, plagiarism and other academic offences under the [McGill University Code of Student Conduct and Disciplinary Procedures](#) and the [Faculty of Medicine and Health Sciences Code of Conduct](#)

The work submitted for this assessment is expected to be your own. The use of technologies such as ChatGPT is prohibited and will be considered a violation of the Code of Student Conduct.

L'université McGill et Faculte de Medecine et des Sciences de la Sante attachent une haute importance à l'honnêteté académique. Ils incombent par conséquent à tous les étudiants de comprendre ce que l'on entend par tricherie, plagiat et autres infractions académiques, ainsi que les conséquences que peuvent avoir de telles actions, selon le [Université de McGill Code de conduite de l'étudiant et des procédures disciplinaires](#) et [Faculté de médecine et des sciences de la santé](#).

McGill University is situated on the traditional territory of the Kanien'kehà:ka, a place which has long served as a site of meeting and exchange amongst nations. We recognize and respect the Kanien'kehà:ka as the traditional custodian of the lands and waters on which we meet today.

IMPORTANT: The instructors may make use of text comparison software to compare the work submitted with that of previous years.

Right to submit in English or French written work that is to be graded: In accord with [McGill University's Charter of Students' Rights](#), students in this course have the right to submit in English or in French any written work that is to be graded.

Conformément à [la Charte des droits de l'étudiant](#) de l'Université McGill, chaque étudiant a le droit de soumettre en français ou en anglais tout travail écrit devant être noté, sauf dans le cas des cours dont l'un des objets est la maîtrise d'une langue.

Consequences of not completing assignments as requested: An individual who does not complete a required assignment and who does not have a university-recognized reason for deferral will receive a 0 in that portion of the course. Assignments submitted late will receive a deduction of 2% per day, including weekends.

Dress Code: Professionalism with respect to dressing is encouraged throughout the course of the semester. It is each student's responsibility to have appropriate attire during all class assignments and learning activities.

Copyright of course materials: Instructor generated course materials (e.g., handouts, notes, summaries, exam questions, etc.) are protected by law and may not be copied or distributed in any form or in any medium without explicit permission of the instructor. Note that infringements of copyright can be subject to follow up by the University under the Code of Student Conduct and Disciplinary Procedures.

Course Accessibility: *"As the instructor of this course I endeavor to provide an inclusive learning environment. However, if you experience barriers to learning in this course, do not hesitate to discuss them with me and the [Student Accessibility and Achievement](#), 514-398-6009."*

Course evaluations: [End-of-course evaluations](#) are one of the ways that McGill works towards maintaining and improving the quality of courses and the student's learning experience. You will be notified by e-mail when the evaluations are available. Please note that a minimum number of responses must be received for results to be available to students.

Additional policies governing academic issues which affect students can be found in the [Academic Rights and Responsibilities](#)

In the event of extraordinary circumstances beyond the University's control, the content and/or evaluation scheme in this course is subject to change.

McGill University is situated on the traditional territory of the Kanien'kehà:ka, a place which has long served as a site of meeting and exchange amongst nations. We recognize and respect the Kanien'kehà:ka as the traditional custodian of the lands and waters on which we meet today.

Assignment Details

1. Preparatory quizzes (15%)

- Every week, a clinician will present a neurological condition that they encounter in their practice during an in-person case study.
- Case studies and guiding questions related to the neurological condition under discussion will be posted via myCourses in the file for the corresponding lecture.
- In order to optimize your learning experience and allow for an interactive session, you will be asked to complete an online quiz before each case presentation.
- The questions are not designed to be tricky or difficult but are meant to assess your comprehension of the condition and of the readings in order to prepare for the clinical case presentations. Cases are constructed to emphasize signs & symptoms, treatment options and topics relevant to the neurological condition discussed.
- Each quiz will consist of 4-5 multiple choice or fill-in the blank questions based on the reading material, associated with the neurological condition and the case-related readings.
- The preparatory work quiz will be made available in the quiz section of myCourses one week prior to the corresponding case study and will have to be completed by 12:30 PM (ET) on the day of the case study.
- When you start the quiz, you will have 30 minutes to complete it.
- There will be a total of 10 preparatory quizzes, one for each case presentations. The 9 quizzes with the highest marks will count towards the final grade.

2. In-class participation (10%)

- Following each case presentation and the group presentations, students will be asked to answer 1 question about the topics discussed in class.
- Students will have time provided at the end of each case study to answer the question.
- The question will be handed in by the end of class.
- Each participation question is worth 1%. 10/11 in-class reflections will count, including the reflection after the student presentations where everyone is expected to be present.

3. Midterm exam (25%)

- The midterm will last 2 hours and will consist of multiple choice, fill-in the blank and short answer questions. Questions will be based on the readings, lectures & case study material associated with the subjects covered in weeks 1 to 5.

4. Presentation (15%, group project)

Groups and topic selections

- This project will be done in groups of 4 or 5 students that will be assigned on myCourses.
- Each group will be assigned a different case.

Presentation

- Students will be asked to submit their slides & 1-page condition resource tool in the assignment folder on MyCourses by Nov. 10th 12:00 PM (noon).

McGill University is situated on the traditional territory of the Kanien'kehà:ka, a place which has long served as a site of meeting and exchange amongst nations. We recognize and respect the Kanien'kehà:ka as the traditional custodian of the lands and waters on which we meet today.

- The presentation & slides must address the following topics that are based on the **Condition Resource Tool** (Appendix A):
 1. Neurological aspects (Etiology)
 2. Epidemiological aspects
 3. Clinical aspects (Signs & symptoms)
 4. Functional implications for this person
 5. Treatments: Important medical treatment with emphasis on possible OT/PT treatment interventions.
- The 1-page completed **Condition Resource Tool** must also be submitted but is NOT examinable material for students. The completed condition resource tool should be size 10, arial, single-spaced, using the table provided.
- A detailed grading rubric will be available on myCourses.
- Students will also have 7 minutes for their presentation (not including case description)
- An instructor will also ask students at least one question.

5. Final exam (35%)

- The final exam will last 3 hours and consist of multiple choice, fill-in blank and short answer questions. Questions will be based on the readings, lectures & case study material associated with the subjects covered in weeks 7 to 14.

Appendix A: Condition Resource Tool

Neurological condition: _____	
1. Neurological aspects (Etiology)	a. When someone is found to have this condition what part of the nervous system has been affected and what brain functions are affected, and how? <i>(Ex: central versus peripheral nervous system, sensory versus motor cortex, dopamine versus serotonin)</i>
	b. For this condition, what are the probable causes of the alteration observed in the normal nervous system? <i>(Ex: anoxia, atrophy, trauma, demyelination)</i> <i>The answers to question 1 and 2 often overlap.</i>
2. Epidemiological aspects	a. What are the factors more often associated with an increased risk of developing this medical condition? <i>(Ex: hypertension, diabetes, heredity)</i>
	b. Is this medical condition more commonly seen in a specific group of individuals? <i>(Ex: male vs female, old vs young, caucasians vs hispanics)</i>
3. Clinical aspects (Signs & symptoms)	a. What are distinctive clinical signs and symptoms associated with this medical condition? What are the principal factors needed for a differential diagnosis? <i>(Ex: hemiplegia, ataxia, tremor, loss of short-term memory)</i>
	b. Are other impairments associated with this condition? <i>(Ex: hydrocephalus and cognitive impairments are often associated with spina bifida)</i>
4. Functional implications	a. What are the functional implications of this medical condition? i.e. What are the activity restrictions and participation limitations to be encountered in an individual's daily activities? <i>(Ex: Is there an increased probability of falls? What are the limitations for the person?)</i>
5. Treatments	a. What are the most common medical and OT/PT treatments currently in use for this condition? (E.g.: rTPA, Ritalin, surgery, strengthening, constraint-induced therapy, diet restrictions, etc.) For each of these medical treatments consider: <ul style="list-style-type: none"> • The clinical signs and symptoms alleviated by this treatment. • How the treatment acts on the clinical signs and symptoms. • The positive and negative impacts of the medical, surgical and/or rehabilitation treatment on functional outcomes of the individual.

McGill University is situated on the traditional territory of the Kanien'kehà:ka, a place which has long served as a site of meeting and exchange amongst nations. We recognize and respect the Kanien'kehà:ka as the traditional custodian of the lands and waters on which we meet today.
