Workshop in clinical proteomics

Mass spectrometry-based tissue-imaging: improving diagnostic and health care

Organizing committee: Pierre Chaurand, Christoph Borchers, Tommy Nilsson

Friday September 9, 2011
9:00 am - 12h30 pm

Burnside Hall – Room 306
McGill University
805 Sherbrooke Street West
Montreal, Quebec H3A 2K6

We invite you to attend a one-day workshop on the potential of imaging mass spectrometry in the clinical setting. The ease and multiplex nature of the imaging MS technology for monitoring molecular markers has the potential to provide a new platform for molecular pathology for enhanced diagnosis, prognosis and evaluation of therapy, assessed at the molecular level for individual patients. This educational symposium will give an introduction to the technology and examples of recent achievements in the monitoring of disease by leading experts in the field.

Speakers: Richard Caprioli (Vanderbilt University School of Medicine)
John Semmes (Eastern Virginia Medical School)
Vassilios Papadopoulos (McGill University Health Centre)
Howard Bergman (Fonds Recherche Québec - Santé)
Reid Groseclose (GlaxoSmithKline)
Gary Kruppa (Bruker Daltonics)

If you plan on attending, please RSVP to: pierre.chaurand@umontreal.ca
