All are welcome to attend the Keynote Lecture:

Dr. Daniel P. Chin, M.D., M.P.H.
Deputy Director, TB Program Strategy Team
Global Health Programs
Bill & Melinda Gates Foundation

***TB delivery for impact: lessons from the
China experience***

Dr. Chin joined the Bill and Melinda Gates Foundation in 2007 and currently serves as Deputy Director for Delivery, Tuberculosis (TB) Program Strategy Team, responsible for the Foundation's work in TB delivery. His responsibilities include oversight of the Foundation's TB programs in India, China, and South Africa, working with global partners, all aspects of product delivery, and supporting product development. From 2007-15, he served as the Senior Program Officer for TB in the Foundation's China Office where he was responsible for the Foundation's TB projects in China. From 2012-14, he was also responsible for all HIV projects. In his capacity, he worked with the Chinese Ministry of Health and other national and international partners to develop projects ranging from implementation of new tools (diagnostics, drugs, and medication monitor) to demonstration of comprehensive programs to tackle the TB and HIV problems in China.

Prior to joining the foundation, Dr. Chin was with the World Health Organization and served as the WHO Country Adviser on TB to the Chinese Ministry of Health from 1999 to 2007. He was the main international TB expert providing policy and technical support to the Ministry, the China CDC, and other international partners (including the World Bank, Global Fund to Fight AIDS, TB, and Malaria, and other bilateral donor such as DFID, JICA) as the country scaled up the WHO-recommended DOTS program nationwide. He helped to formulate the essential policies, programs and financing for the current national TB control program in China and has extensive experience implementing and evaluating large-scale public health programs. Prior to working in China, Dr. Chin was on the medical school faculty at the University of California, San Francisco, where he received his medical training. In addition, he also worked in public health at state and city levels in the United States.
