Site
Montreal Children’s Hospital

Elective Description
Open to one clerkship student at any one time - prior clinical rotation in Pediatrics is highly recommended. The student will be integrated into the regular clinical activities of the department. These include 3 clinics a week, including an ambulatory consult clinic, a clinic seeing exclusively children with cystic fibrosis, and a general chest clinic, which offers considerable exposure to problems related to tuberculosis and chronic respiratory conditions.

Students will also have the opportunity to attend sub-specialty clinics. Furthermore, the student will participate in consultative work on the ward, related to difficult respiratory problems, including respiratory failure in children. A wide spectrum of unusual respiratory diseases in children is seen.

Elective Duration
2, 3 or 4 weeks

Prerequisites
Prior clinical rotation in Pediatrics is highly recommended.
