Elective Description

A 4-week elective in Obstetrics & Gynecology Research is offered at the Jewish General Hospital under the direct supervision of Dr. H Abenhaim. This elective will consist of a structured program that will include carrying out a research project and attending seminars in general and perinatal epidemiology.

Elective Duration

4 weeks

Scope of Work

During the first week of the elective, students will identify a research question and carry out a literature review of the subject matter. During weeks 2 and 3, with adequate supervision and support, the student will develop and carry out a research protocol to address the established research question through a retrospective cohort design using existing databases. In the final week, an abstract will be written for submission to a clinical meeting. Students will be given the resources to carry out a project to completion with the objective of publishing a manuscript in a peer-reviewed journal.
